Planning for Site of San Jose Medical Center

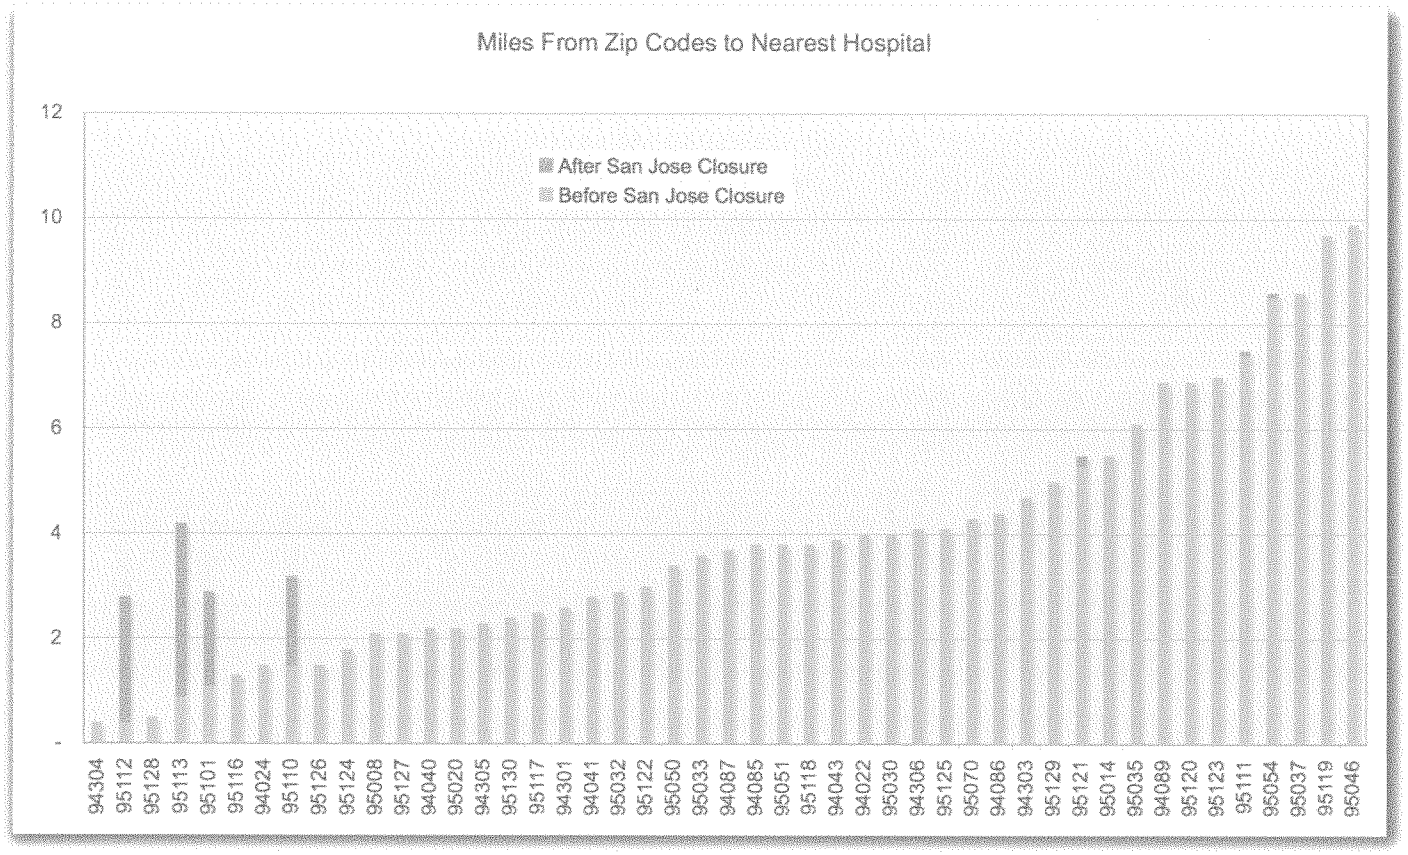
Responses to Questions Asked at May 2, 2007 SAC

Prepared by Regional Medical Center of San Jose

May 16, 2007

HEALTHWORKS

While distance to the nearest hospital has increased for zip codes surrounding the SJMC site, distances to the now current nearest hospital are less than average for the county; and therefore, very reasonable

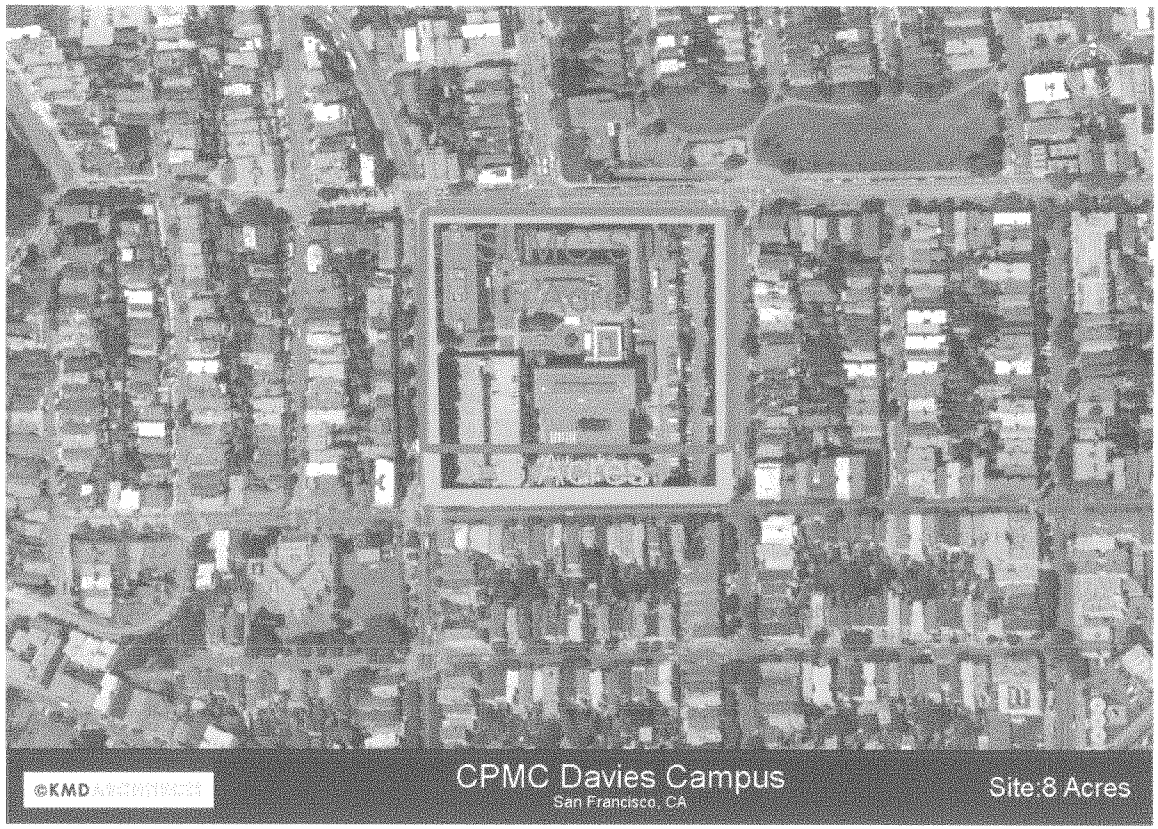


These results show virtually the same relative results as the time study reported previously and based on a 2006 study; methods in both cases used MapQuest; average travel time used by MapQuest was approximately 30 miles per hour

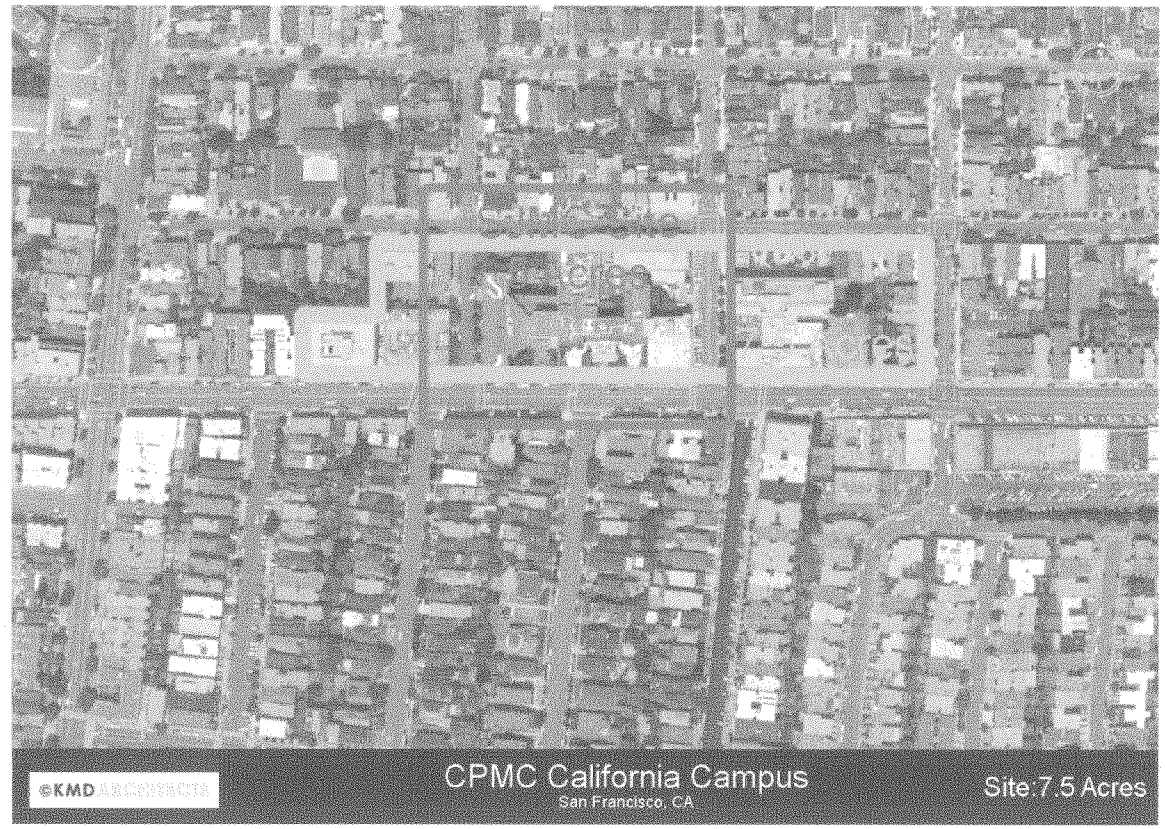
In 2006 if RMCSJ had provided the same level of Medi-Cal inpatient services as SJMC and RMCSJ provided prior to SJMC closure, operating losses would have increased by an estimated $3 million

	2001	2002	2003	2004	2005	3 Qtrs 2006 Annualized	4th Qtr 2006 Annualized
RMCSJ Medi-Cal Loss Not Incurred						$(3,000,000)	$(3,000,000)
SJMC	$(4,062,820)	$(12,018,791	$(16,381,560	$(46,033,391			
RMCSJ	$(7,888,266)	$(16,548,853	$(24,294,945	$(30,054,487	$(29,326,581	$(17,666,429	$(1,127,208)

CPMC Davies Campus has an average daily census of 107 patients and is on 8 acres of land



CPMC California Campus has an average daily census of 142 patients and is on 7.5 acres of land



CPMC St. Luke's Campus has an average daily census of 138 patients and is on 5 acres of land

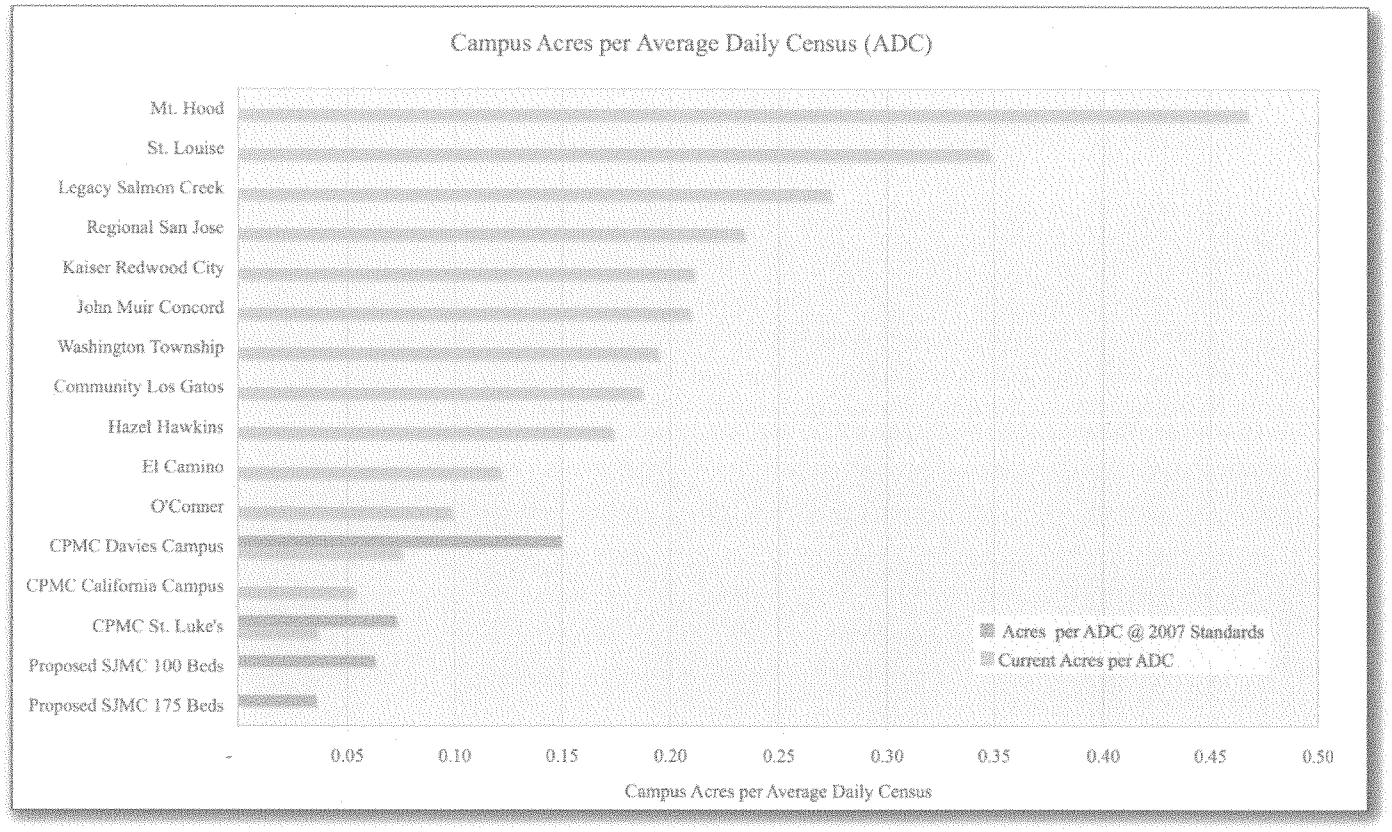
St. Louise Regional has an average daily census of 46 patients and is on 16 acres of land

Hazel Hawkins has an average daily census of 75 patients and is on 13 acres of land

Community Hospital of Los Gatos has an average daily census of 75 patients and is on 14 acres of land

Legacy Mt. Hood has an average daily census of 45 patients and is on 21 acres of land

This comparison shows campus acres per occupied bed at various hospitals and demonstrates why 5 acres would be insufficient to support even a small acute care hospital on the SJMC site



- In the last 25 years the average square footage per bed has gone from 1,000 to 2,000.
- CPMC California campus is going to close for acute hospital care and be converted to other health care purposes.
