## EXECUTIVE SUMMARY

Charities Housing Development Corporation retained SLR International Corporation (SLR) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 397 Blossom Hill Road in San Jose, California (Site). The purpose of the ESA was to identify environmental conditions associated with the property as defined by ASTM E 1527-05, Standard Practice for Environmental Site Assessments.

### SITE DESCRIPTION/ OPERATIONS

The Site consists of 2.01 acres of land developed with a roller skating rink and associated parking lot located in the southern portion of the Santa Clara Valley in San Jose, Santa Clara County, California.

### HISTORICAL USE

A historical review determined that the Site was cultivated with an orchard from at least the late-1930s to the mid-1970s. The current roller rink was constructed on-Site in 1976, and has operated consistently as a roller rink until 2014 when the building was transformed into a furniture show room.

### REGULATORY REVIEW

The Subject Property was not listed on the available environmental databases.

### CONCLUSIONS

SLR has performed a Phase I Environmental Site Assessment (Phase I ESA) of property located at 397 Blossom Hill Road in San Jose, California. The Phase I ESA was performed in conformance with the scope and limitations of ASTM Practice E 1527-13. Exceptions to, or deletions from this practice are described in Section 1.4 of this report.

### RECOGNIZED ENVIRONMENTAL CONDITIONS

The past uses of the Site have been identified as RECs. These past uses may have been associated with hazardous materials that may have impacted the Site. Past uses of the Site include:

- *Former Agricultural Use* - The potential presence of chemical pesticides and/or insecticides may be present in the soil at the Site and is considered a REC. SLR recommends testing soil for potential pesticide and insecticide contamination. Soil sampling and analyses should be performed to evaluate potential residual pesticide and insecticide concentrations, if any, prior to Site redevelopment.
- *Lead-Based Paint* – Due to the age of the buildings, lead-based paint is likely present. If lead-based paint on building materials is peeling, flaking or blistered, it should be removed from the structures prior to demolition. Any lead-based paint not securely adhered to the structures must be managed and appropriately disposed as a separate waste stream. The Cal/OSHA Lead in Construction Standard, Title 8, California Code of Regulations (CCR) 1532.1 requirements must be followed during demolition activities.

Soil sampling and analyses should be performed to evaluate the potential existence of lead concentrations around building structures, if any, prior to Site redevelopment.

Given the history of the Site, the age of the building structures and if a higher degree of comfort is desired, consideration should be given to collect surficial soil samples from the Site to evaluate if potential historic impacts to the Site have occurred.

#### **HISTORIC RECOGNIZED ENVIRONMENTAL CONDITIONS**

This assessment has revealed no evidence of historical RECs (HRECs) in connection with the Site.

#### **CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS**

This assessment has revealed no evidence of controlled RECs (CRECs) in connection with the Site.

#### **SIGNIFICANT DATA GAPS**

During this Phase I ESA, SLR did not identify a data gap that would significantly affect the conclusions of this report.

## 1.2 OBJECTIVES

The objective of this Phase I ESA is to identify, to the extent feasible pursuant to the processes outlined in the scope of work, *recognized environmental conditions (RECs)*, *historical environmental conditions (HRECs)*, or *controlled recognized environmental conditions (CRECs)* as defined by the ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13 (ASTM E1527) for the Site.

The ASTM Practice defines a REC as:

“...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to release to the environment; under conditions indicative of a release to the environment or under conditions that pose a material threat of future release. De minimis conditions are not recognized environmental conditions.”

*De minimis conditions* are defined as “conditions that generally do not present a threat to human health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

The ASTM Practice defines a HREC as:

“...a past release of any hazardous substances or petroleum products that have occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or

meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls...”

The ASTM Practice defines a CREC as:

“...a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls...)”

### **1.3 PURPOSE**

Typically the purpose of a Phase I ESA is to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability.

This assessment is intended to constitute all appropriate inquiries into the previous ownership and uses of the Site consistent with good commercial or customary practice, as defined in 42 U.S.C. §9601(35) (B) of CERCLA.

For this assessment, the User is the current owner of the Site and the assessment was completed in support of potential refinancing efforts.

### **1.4 SCOPE OF WORK, SIGNIFICANT ASSUMPTIONS, TERMS AND CONDITIONS**

The scope of work, significant assumptions, and terms and conditions applicable to this Phase I ESA are identified in the following documents:

- ✓ SLR’s Engagement Letter dated October 26, 2015

During the performance of this assessment, no significant data gaps were identified.

## 6. CONCLUSIONS

SLR has performed a Phase I ESA at the property located at 397 Blossom Hill Road in San Jose, California. The Phase I was performed in conformance with the scope and limitations of ASTM Practice E 1527-13. Exceptions to, or deletions from, this practice are described in Section 5.0 of this report.

### ***Recognized Environmental Conditions***

SLR's assessment revealed the following evidence that can be classified as a REC or a HREC associated with the Subject Property:

- The past uses of the Site have been identified as RECs. These past uses may have been associated with hazardous materials that may have impacted the Site. Past uses of the Site include:
  - *Former Agricultural Use* - The potential presence of chemical pesticides and/or insecticides may be present in the soil at the Site and is considered a REC. SLR recommends testing soil for potential pesticide and insecticide contamination. Soil sampling and analyses should be performed to evaluate potential residual pesticide and insecticide concentrations, if any, prior to Site redevelopment.
  - *Lead-Based Paint* – Due to the age of the buildings, lead-based paint is likely present. If lead-based paint on building materials is peeling, flaking or blistered, it should be removed from the structures prior to demolition. Any lead-based paint not securely adhered to the structures must be managed and appropriately disposed as a separate waste stream. The Cal/OSHA Lead in Construction Standard, Title 8, California Code of Regulations (CCR) 1532.1 requirements must be followed during demolition activities. Soil sampling and analyses should be performed to evaluate potential existence of lead concentrations around building structures, if any, prior to Site redevelopment.

Given the history of the Site, the age of the building structures and if a higher degree of comfort is desired, consideration should be given to collect surficial soil samples from the Site to evaluate if potential historic impacts to the Site have occurred.

### ***Historic Recognized Environmental Conditions***

This assessment has revealed no evidence of historical RECs (HRECs) in connection with the Site, with the following exception:

### ***Controlled Recognized Environmental Conditions***

This assessment has revealed no evidence of controlled RECs (CRECs) in connection with the Site, with the following exception:

### ***Significant Data Gaps***

During this Phase I ESA, SLR did not identify a data gap that would significantly affect the conclusions of this report.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 02/07/2017 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOC Case Number: 08S1E11K01f  
File Location: All Files are on GeoTracker or in the Local Agency Database  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline  
Site History: This fuel leak case was granted case closure on 11/30/07. At the time of case closure, the following conditions remained at the site: residual contamination of 3,500 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 7.9 ppm Benzene, 79 ppm Toluene, 59 ppm Ethylbenzene, 250 ppm Xylenes, 10 ppm Total Oil and Grease (TOG), 8 ppm Total Lead, and 0.061 ppm Methyl tert-Butyl Ether (MtBE) remained in soil; and residual contamination of 760 parts per billion (ppb) TPHg, 2 ppb Benzene, 2.2 ppb Ethylbenzene, 4.9 ppb Xylenes and 69 ppb MtBE remained in groundwater. The previous case closure summary form incorrectly reported the number of underground storage tanks that were present onsite at the time of case closure. The waste oil UST had been removed in 1994 and not replaced. Only 3 gasoline USTs remained onsite. In 1994 following UST removal, site structures were demolished and redeveloped with the car wash building and small minimart in the current configuration. 2008 In May, 6 soil borings (BA2 through BA5 and BAB5 and BAB6) were advanced onsite. 11 soil samples were collected and reported to contain maximum concentrations of 490 ppm TPHg, 7.1 ppm TPH as Diesel (TPHd), 0.21 ppm Benzene, 0.2 ppm Toluene, 2.3 ppm Ethylbenzene, 8.4 ppm Xylenes, 0.29 ppm MtBE, 0.064 ppm Tert Butyl Alcohol (TBA), and 1.8 ppm Naphthalene. 8 grab groundwater samples were collected and reported to contain maximum concentrations of 61,000 ppb TPHg, 4,200 ppb TPHd, 1,500 ppb Benzene, 37 ppb Toluene, 5,400 ppb Ethylbenzene, 4,200 ppb Xylenes, 790 ppb MtBE, 470 ppb TBA, 21 ppb Tert Amyl Methyl Ether (TAME), and 1,900 ppb Naphthalene. Based on this new data, the fuel leak case was re-opened in June. In December, 3 soil borings (B1 through B3) were advanced onsite for the collection of grab groundwater samples. The grab groundwater samples were reported to have maximum concentrations of 43,000 ppb TPHg, 6,800 ppb TPHd, 2,200 ppb Benzene, 26 ppb Toluene, 3,700 ppb Ethylbenzene, 6,600 ppb Xylenes, 400 ppb MtBE, 120 ppb TBA, and 2 ppb TAME. 2009 Between August and September, 4 groundwater monitoring wells (MW15 through MW18) were installed onsite to depths of 15.5-20 feet below the ground surface (ft bgs). 14 soil samples were collected and reported to have maximum concentrations of 200 ppm TPHg, 420 ppm TPHd, 0.46 ppm Benzene, 7.9 ppm Ethylbenzene, 1.2 ppm Xylenes, 0.068 ppm MtBE, 0.059 ppm TBA, 0.005 ppm TAME. Periodic groundwater monitoring commenced at the site. Initial sampling of the wells reported maximum concentrations in groundwater of 34,000 ppb TPHg, 9,800 ppb TPHd, 1,400 ppb Benzene, 5 ppb Toluene, 1,900 ppb Ethylbenzene, 4,500 ppb Xylenes, 470 ppb MtBE, 430 ppb TBA, 15 ppb TAME, and 330 ppb Naphthalene. The highest concentrations were reported for samples collected from wells MW16 and MW17, which are located near the dispenser islands. Between 2009 and 2011, the only ongoing activity was groundwater monitoring. 2011 Between August and September, two additional groundwater monitoring wells (MW19 and MW20) were installed on and offsite. 10 soil samples were collected and were reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). The new wells were added to the groundwater monitoring program. Between 2011 and 2014, the only ongoing activity was groundwater monitoring. 2014 In March, 3 soil borings (SB1 through SB3) were installed offsite. 15 soil samples were collected and reported to have a maximum concentration of 12 ppm

TPHd, which was the only constituent reported to be present above the laboratory reporting limits. Temporary monitoring wells were placed in the open borings of SB2 and SB3 for collection of groundwater samples. The groundwater samples were reported to contain a maximum concentration of 70 ppb TPHd, which was the only constituent reported to be present above the laboratory reporting limits. Also at this time, the final groundwater monitoring event was conducted and reported maximum concentrations of 6,600 ppb TPHg, 2,300 ppb TPHd, 190 ppb Benzene, 2 ppb Toluene, 220 ppb Ethylbenzene, 5 ppb Xylenes, 89 ppb MtBE, 230 ppb TBA, and 7 ppb TAME.

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### DEED: Deed Restriction Listing

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
