## 1.0 EXECUTIVE SUMMARY

---

Environmental Investigation Services Inc. (EIS) has completed an environmental site assessment of a property located at 1200/1202 Oakland Road and 757 Commercial Street, San Jose, California. Peter Littman, Environmental Professional and EIS Geologist, Diana Rattanasith, prepared this report according to ASTM E 1527 2013 Standards.

This Executive Summary is provided solely for the purpose of overview. Any party who relies on this report must read the full report. The Executive Summary omits a number of details, any one of which could be crucial to the proper understanding and risk assessment of the subject matter.

In the professional opinion of EIS “we have performed a Phase I Environmental Site Assessment, in conformance with the scope and limitations of ASTM Practice E 1527 2013 for the property located at 1200/1202 Oakland Road and 757 Commercial Street, San Jose, California. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report. An appropriate level of inquiry has been made into the previous ownership and uses of the property, consistent with good commercial and customary practice, in an effort to minimize liability. This assessment has revealed evidence of a recognized environmental concern in connection with the property.”

The continued use of 1200 Oakland Road as a fuel service station with underground storage tanks (USTs) containing diesel and gasoline since the most recent regulatory case closure in 2012 represents a recognized environmental concern.

The current and historical use of 757 Commercial Street as an auto repair shop for at least 22 years, with associated handling and storage of petroleum hydrocarbons, is also considered a recognized environmental concern.

The historical presence of five former USTs which were removed from the property and granted regulatory case closure after subsequent remedial action represents a controlled recognized environmental concern.

EIS inspected the subject property on February 8, 2017. The subject property is approximately 1.61-acres in size and irregular in shape. Addresses currently associated with the subject property are 757 Commercial Street, and 1200/1202 Oakland Road. A structure currently stands at each address. 1200 Oakland Road is currently a Flyers Gas Station with one rectangular single-story garage/storage structure of 1,480 square feet (SF). 1202 Oakland Road is developed with an irregularly shaped single-story 2,075-SF commercial structure presently occupied by Blair Glass & Upholstery. 757 Commercial Street has one 9,960-SF garage-office structure with high ceilings and a limited second story. The building is currently used by Bay Area Truck Services. Oakland Road addresses are situated on the western half of the property, while 757 Commercial Street is located on the eastern half of the Site. In addition, a small dirt and gravel area currently used for vehicle parking is located on the southwestern tip of the property. This area was historically referred to as 751 Commercial Street. On the basis of assessor records and property representative interviews, the “751 Commercial Street” area will simply be considered part of 1200 Oakland Road.

EIS conducted a Site inspection of all interior and exterior subject property areas, with the exception of the small garage/storage structure at 1200 Oakland Road. The Flyer Gas

Station at 1200 Oakland Road has two fuel dispenser islands (four dispensers total) installed near the center of the lot. Paved asphalt parking areas are located on the northern and southeastern portions of 1200 Oakland Road. The building interior of 1202 Oakland Road, occupied by Blair Glass & Upholstery, consists of an office, restroom, and garage space where windows and upholstery are installed in vehicles. Paved asphalt parking areas are located on the south side of the building. Two metal shipping containers located in the parking lot are used to store glass and upholstery materials. Interior areas of 757 Commercial Street (occupied by Bay Area Truck Services) include a repair garage, office, restroom, and parts storage area. Industrial equipment including an enclosed parts washing machine, arc welding equipment, and oil filter cleaning kiln were observed in the repair garage. A private lot on the northern section of 757 Commercial Street is used for storage and truck parking.

During the Site inspection, EIS observed hazardous materials and hazardous waste stored at 1200 Oakland Road and 757 Commercial Street. At 1200 Oakland Road (Flyers Gas Station), a concrete pad north of the dispenser islands indicates the area where two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST are installed. The USTs are connected to four dispensers. The USTs are constructed of steel with fiberglass secondary containment. Two 55-gallon waste oil drums were also observed in the gas station's fenced storage area. Within the garage of Bay Area Truck Services (757 Commercial Street) are stored: one 100-gallon antifreeze carboy, six 55-gallon motor oil drums, one 55-gallon drum filled with used oil filters, and several other containers holding small quantities of waste antifreeze, motor oil, gasoline, propane, and waste oil. Numerous cracks were observed in the concrete floor of the repair garage, along with numerous stains throughout. In addition, eight 55-gallon waste oil drums, three 55-gallon drums filled with used oil filters, and one approximately 250-gallon waste oil drum were observed in the storage lot of Bay Area Truck Services. Spills and stains with an oily sheen were observed in the vicinity of the drums and ASTs.

EIS reviewed Santa Clara County Department of Environmental Health (SCCDEH) records pertaining to the subject property. Available documents primarily included UST permits, test results, and hazardous material/waste storage documentation associated with current and previous service stations and Bay Area Truck Services. Notably, Flyers Gas Station was documented for a malfunctioning UST leak monitoring system in March 2016; the violation was corrected as of April 2016. In addition, inspection records for Bay Area Truck Services from 2001 to 2014 noted multiple violations including small spills, improper labeling of hazardous waste tanks/drums, and incomplete daily/weekly hazardous waste inspections.

To determine the historical use of property, EIS reviewed aerial photographs, city directories, and environmental database files. The subject property has historically been commercial, light industrial, and agricultural. Each structure currently at the property was built approximately in the early 1960s or 1970s. 1202 Oakland Road has been occupied by the Blair Glass & Upholstery since 1970, and was previously a produce market in the 1960s. 757 Commercial Street has been occupied by Bay Area Truck Services since 1995, with the intermittent shared tenancy of Mack Truck Bay Area and Tesi Leasing Inc. The address was previously occupied by various design and sign printing businesses including Danco Graphics, Diamond Signs, and Accu Graphics between 1975 and 1985. The building was occupied by a rental company in 1970. 1200 Oakland Road has been occupied by various fuel service stations since the mid-1960s. Tenants prior to Flyers Gas Station include

Olympian Service Station in 2009, Nella Oil Card Lock from at least 1995 to 2007, Beacon Fuel Cardlocks from at least 1985 to 1991, and Dan's Shell Service from approximately 1966 to 1980. Aerial photographs reveal that the entire subject property was an undeveloped lot in 1960. The subject property was previously an agricultural field from at least 1948 to 1956.

All surrounding properties are currently commercial, with the exception of the neighboring trailer park adjacent north of the Site. Historically, areas surrounding the subject property have been residential, commercial, light industrial, and agricultural.

To evaluate off-site concerns, EIS reviewed an Environmental Record Search (ERS) database search of the site and all surrounding sites. ERS database search distances were in accordance to the ASTM E 1527 2013 standard. The results of the database search are found in a copy of the ERS RecCheck report in the Appendix. According to the environmental database list review there are two RCRA Generator sites, two off-site Historical UST sites, and one off-site HWIS listings at addresses adjacent to the subject property. There are 54 off-site LUST sites, 19 off-site SLIC sites, three SWIS sites, five SWRCY sites, four CERCLIS-NFRAP sites, and two RCRA non-CORRACTS TSD sites within a ½-mile radius of the subject property, along with two State/Tribal Equivalent NPL sites, four RCRA CORRACTS sites, seven Envirostor sites, and one ROD site within a one-mile radius of the subject property.

The nearest offsite LUST case is listed at 1181 Oakland Road, located west across the street from the subject property. The local hydraulic gradient is interpreted to be west and northwest. The property has been occupied a by Burger King Restaurant since 1990. Prior tenants of the property included freight service and trucking transportation businesses. One 12,000-gallon gasoline UST and one 2,000-gallon diesel UST were removed from the site in July 1985. Soil samples collected immediately after the tank removal revealed elevated concentrations of total petroleum hydrocarbons as gasoline (TPHg) at 8,700 parts per-million (ppm) and TPH as diesel (TPHd) at 27 ppm (TPHd was later detected in a 2010 soil sample at 2,300 ppm). Closure documentation stated that in 1985, "It is reported that soil was excavated, however the volume and area were not reported." Collection of grab groundwater samples from the property in 1997 revealed a TPHg concentration of 31,000 parts per-billion (ppb) and TPHd at 350,000 ppb. Benzene was also detected in site soil at 2.8 ppm. Four groundwater monitoring wells were installed at the property in 1999 and a monitoring program was initiated. A dual phase extraction test was conducted in December 2004, removing approximately 2,000 gallons of groundwater. Additional groundwater and soil samples were collected in 2008 and 2010, which reported steeply declining TPHg and TPHd impacts in the downgradient direction (west). The final round of groundwater monitoring was conducted in June 2011, revealing maximum concentrations of TPHg at 1,500 ppb, TPHd at 3,900 ppb, benzene at 18 ppb, and low concentrations of toluene, ethylbenzene, xylenes, and methyl tert-butyl ether (MTBE). SCCDEH granted 1181 Oakland Road regulatory closure status in February 2012, stating that the site is fully characterized, that is not a risk to indoor air, and that contaminant had been mitigated as much as feasibly possible and are likely to naturally attenuate over time. Based on the distance from the Site, downgradient location, and regulatory closure status, the closed LUST case at 1181 Oakland Road is considered unlikely to impact the subject property, and does not represent an offsite recognized environmental concern. The case closure summary also notes that the concentration of MTBE detected in one of the wells may be attributed to an offsite source.

Neighboring property 775 Commercial Street, located adjacent to the east of the subject property, appears on the Historical UST database. 775 Commercial Street is currently used as a DirectTV office. The property had at least one waste oil UST in 1988 while occupied by IBG International, Inc., according to RWQCB Hazardous Substance Storage Container Information documents. No additional information was included in the listing. The possible historical presence of a UST directly up-gradient of the subject property at neighboring address 775 Commercial Street represents a potential offsite environmental concern.

There are no offsite listings considered likely to present a significant environmental concern for the subject property.

### **SUBJECT PROPERTY**

The subject property is listed under a number of environmental databases including County-UST-CA, Historical-UST, HWIS, County-LUST-Closed-CA, RCRA-SQG, Hist-Regional-SLIC-CA databases, and miscellaneous other historical site listings. The majority of these the database listings pertain to former LUST cases at the subject property.

A closed LUST case is associated with 757 Commercial Street. There are also two closed LUST cases associated with 1200 Oakland Road (occasionally referred to as 751 Commercial in the ERS Database Report).

The former LUST case at 757 Commercial Street was opened in 1988 while the address was occupied by South Bay Mack Truck. A single 1,000-gallon steel UST containing gasoline was removed from the eastern exterior of 757 Commercial Street on February 5, 1988. The closure letter indicates that the tank was installed in approximately 1971. Four soil samples were collected from beneath the former tank pit area. Laboratory results revealed concentrations of TPHg at 22,000 ppm, benzene at 22 ppm, toluene at 850 ppm, ethylbenzene at 390 ppm, and xylenes at 940 ppm in a soil sample in collected near the product end of the former tank from a depth of 8.3 ft. The three other samples contained either very low or non-detectable concentrations of TPHg and xylenes, with no detectable concentrations of benzene, toluene, or ethylbenzene. According to the closure letter document, impacted soil was used to backfill the tank pit after removal. One monitoring well was installed directly to the north of the former UST area in mid-1991. Soil samples collected at depths of 5.5 ft., 10.5 ft., 15.5 ft., and 20.5 during well drilling contained no detectable concentrations of BTEX or TPHg. Six quarters of groundwater monitoring were conducted. On December 12, 1991, the 2<sup>nd</sup> groundwater monitoring event revealed concentrations of benzene at 4.7 ppb, toluene at 2.1 ppb, ethylbenzene at 7.8 ppb, and xylenes at 8.0 ppb, with no detectable concentrations of TPHg. There were no detections of BTEX or TPHg during any of the other five monitoring events. To assess the potentially impacted soil that was used to backfill the pit, six soil samples were collected (three from backfill, three from native soil) at depths of 5, 10, and 16 ft. below ground surface (bgs), none of which contained detectable concentrations of TPHg or BTEX. SCCDEH granted the LUST case at 757 Commercial Street regulatory closure on January 19, 1994. The closure letter recommendations stated: "The disposal of contaminated soil detected at the time of the tank removal is unclear. However, subsequent soil samples collected in the backfill, beneath the excavation, and at the boundaries of the excavation, have not confirmed that significant soil contamination is present. In addition, the results of four consecutive sampling events have not detected petroleum hydrocarbon contamination. Minor levels of soil

contamination may remain at the site but do not appear to present a threat to groundwater quality beneath the site.”

The earliest LUST case at 1200 Oakland Road was opened in October 1993 following the removal of two 5,000-gallon diesel USTs and two gasoline USTs of 7,500 and 8,000-gallons from the Beacon Service Station. The four USTs were installed on the northern portion of 1200 Oakland Road, in the same approximate area of the Site’s current USTs. Fuel dispensers were also located in the same approximate area as present day. During the removal, a hole was observed in one of the diesel tanks. Subsequent soil samples collected from the tank pit and dispenser area revealed concentrations of TPHg at 720 ppm, TPHd at 1,700 ppm, and benzene at 1.5 ppm. The tank pit was over-excavated to a depth of 25 feet (ft.). Associated product piping was also removed and pipe trenches were over-excavated a depth of 20 ft. bgs. The over-excavation work removed a cumulative 1,250 cubic yards, which was disposed of at an appropriate offsite landfill. Installation of four monitoring wells (designated MW-1 through MW-4) and grab groundwater borings in 1994 and 1995 revealed maximum concentrations of TPHg at 9,200 ppb, TPHd at 400 ppb, benzene at 510 ppb, toluene at 310 ppb, ethylbenzene at 840 ppb, and xylenes at 2,500 ppb. Naturally occurring arsenic was also detected in two of the wells at 110 and 120 ppb. Three grab groundwater samples were collected from approximately 150 ft. to the northwest of the UST area. Analysis of the three samples revealed no detectable concentrations of TPH, TPHd, or benzene. The Beacon Service Station LUST case was granted regulatory closure status by SCCDEH on January 15, 1998. The associated closure letter stated, “Based upon the results of source removal and confirmation sampling, residual petroleum hydrocarbon contamination remains in soil (800 ppm TPHg, 76 ppm TPHd, and 0.59 benzene). Groundwater has also been impacted (1,100 ppb TPHg, 370 ppb TPHd, 36 ppb MTBE, and no benzene); however, dissolved concentrations have reduced significantly and groundwater monitoring trends appear to show active attenuation of the dissolved plume and will achieve water quality objectives through natural attenuation.” The four monitoring wells were destroyed in an indeterminate year following the case closure.

An additional LUST case was opened at 1200 Oakland Road in 2003 while the site was occupied by Nella Oil Company service station (a precursor company of Flyers Service Station). Nella Oil Company was a tenant of the Site from at least 1995 to 2007. This more recent LUST case was opened after the State Regional Water Quality Control Board (RWQCB) requested an investigation to assess potential MTBE impacts at the Site due to the presence of a drinking water supply well located approximately 500 feet to the southwest. In 2003, 1200 Oakland Road had two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST, which still exist in present day. Eight grab groundwater samples were collected from up-gradient, cross-gradient, and down-gradient locations throughout the Site in July 2003. Analytical results revealed maximum concentrations of MTBE at 690 ppb and tert-butyl alcohol (TBA) at 890 ppb in groundwater samples collected downgradient of the USTs and dispensers. Three monitoring wells (designated MW-5 through MW-7) were advanced on-site in December 2005 in down-gradient and cross-gradient positions relative to the USTs and dispensers. Several soil samples were collected during the well installations, revealing maximum concentrations of TPHg at 330 ppm, TPHd at 38 ppm, MTBE at 0.05 ppm, and TBA at 0.23 ppm. The first subsequent round of groundwater monitoring revealed maximum concentrations of 1,200 ppb TPHg, 170 ppb MTBE, and 240 ppb TBA, along with low concentrations of benzene, ethylbenzene, xylenes, and 1,2-dichloroethane (1,2-

DCA). In February 2012, groundwater monitoring revealed 30 ppb TPHg, 120 ppb MTBE, and 380 ppb TBA in well MW-6, located directly to the west of the USTs and north of the dispenser islands. MTBE and TBA were also both detected at 12 ppb in well MW-7, located northwest of the UST area and north of the dispensers. The Nella Oil Company case at 1200 Oakland Road was granted regulatory closure by SCCDEH on June 22, 2012. The closure letter summary stated that TPHg, MTBE, and TBA concentrations in site groundwater are unlikely to impact indoor air, and that residual impacts in soil are “confined to depths of 20 ft. bgs, therefore they do not pose a direct contact, inhalation, and ingestion risk to human receptors).” The closure letter also states that residual subsurface contamination appears to be declining due to prior remedial work and natural attenuation. The letter concludes, “The Department of Environmental Health believes that residual soil and groundwater contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment.”

The environmental database review also listed 1200 Oakland Road (listed as 751 Commercial Street) and 757 Commercial Street on the HWIS database for storing and generating small quantities of unspecified organic solids, organic liquid mixtures, hydrocarbon solvents, aqueous solution with organic residues, waste oil, mixed oil and unspecified oil containing waste. Former 757 Commercial Street occupant Bay Area Mack Truck also appears on the RCRA-SQG database in 1988 and 1996. The listing contains no additional information other than noting that the business generated small quantities of hazardous waste.

Consistent with 40 CFR 312 and ASTM E 1527, no data gaps were identified.

---

## **2.0 INTRODUCTION**

---

Environmental Investigation Services Inc. (EIS) has completed an environmental site assessment of the property located at 1200/1202 Oakland Road and 757 Commercial Street, San Jose, California. Peter Littman, Environmental Professional and EIS Staff Geologist, Tyler Sproule, prepared this report according to ASTM Standard E 1527-13.

### **2.1 PURPOSE**

The purpose of this Phase I Environmental Site Assessment was to identify, to the extent feasible pursuant to the processes prescribed herein, recognized environmental conditions in connection with the subject property. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

## **2.2 DETAILED SCOPE OF SERVICES**

This Phase I Environmental Assessment (ESA) was prepared in accordance with EIS' Proposal No. 1711-1 with respect to the property at 1200/1202 Oakland Road and 757 Commercial Street, San Jose, Santa Clara County, California. This was an investigation in general accordance with ASTM E 1527-2013. The work conducted by EIS is limited to the services agreed to Robinson Oil Corporation, and no other services beyond those explicitly stated should be inferred or are implied. The objective of this Environmental Site Assessment was to evaluate the subject site for potential recognized environmental concerns as outlined in the standards referenced above. EIS's professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in the location of the subject site at the time of our investigation. This warranty is in lieu of all other warranties, expressed or implied.

## **2.3 LIMITATIONS**

Our professional judgment regarding the potential for environmental impacts is based on limited data and our investigation was not intended to be a definitive investigation of contamination at the site. Unless specifically set forth in our proposal, the scope of work did not include groundwater, soil sampling or other subsurface investigations, a strict compliance audit of the site, or a review of the procedures for hazardous material use, waste storage or handling prior to disposal, or for personnel safety and health training and monitoring procedures, analyses of radon, formaldehyde, lead paint, asbestos and other hazardous materials or indoor air quality, occupational health and safety or wetlands surveys.

Regarding any subsurface investigation, sampling undertaken or subsurface reports reviewed, our opinions are limited to only specific areas and analytes evaluated and EIS will not be held accountable for analyte quantities falling below recognized standard detection limits for the laboratory method utilized. EIS does not warrant or guarantee the subject property suitable for any particular purpose, or certify the subject site as "clean" or free on contamination. As with any assessment, it is possible that past or existing contamination remains undiscovered.

The professional opinions set forth in this report are based solely upon and limited to EIS's visual observations of the site and the immediate site vicinity, and upon EIS's interpretations of the readily available historical information, interviews with personnel knowledgeable about the site, and other readily available information. Consequently, this report is complete and accurate only to the extent that cited reports, agency information and recollections of persons interviewed are complete and accurate.

The opinions and recommendations in this report apply to site conditions and features, as they existed at the time of EIS's investigation. They cannot necessarily apply to conditions and features of which EIS is unaware and has not had the opportunity to evaluate. Future regulatory modifications, agency interpretations, and/or policy changes may also affect the compliance status of the subject property. EIS has made no attempt to address future financial impacts to the site (e.g., reduced property values) as a result of potential subsurface contaminant migration.

## **2.4 SPECIAL TERMS AND CONDITIONS**

No special terms and conditions were defined as part of this Phase I.

## **2.5 USER RELIANCE**

This Phase I Environmental Assessment was prepared for the sole and exclusive use of Robinson Oil Corporation, the only intended beneficiary of our work. This report is intended exclusively for the purpose outlined herein for the project site location and is intended to be used in its entirety. No excerpts may be taken to be representative of the findings of this assessment. The scope of services performed in execution of this investigation may not be appropriate to satisfy other users, and any use or reuse of this document or its findings, or conclusions presented herein is at the sole risk of the user. This report is not a specification for further work.

---

## **3.0 SITE DESCRIPTION**

---

### **3.1 LOCATION AND LEGAL DESCRIPTION**

The Subject Property is located at 1200/1202 Oakland Road and 757 Commercial Street, San Jose, California. 1200 Oakland Road has an assessor parcel number (APN) of 241-11-021. 1202 Oakland Road corresponds to APN 241-11-014. 757 Commercial Street corresponds to APN 241-11-020. In addition, a small portion dirt and gravel area on the southwestern tip of the property was previously referred to 751 Commercial Street, with corresponding APN 241-11-022. On the basis of assessor records and property representative interviews, the “751 Commercial Street” area will simply be considered part of 1200 Oakland Road. The subject property is located on the north side of Commercial Street and to the east of Oakland Road.

### **3.2 SITE AND VICINITY GENERAL CHARACTERISTICS**

The subject property area is approximately 1.61-acres in size and irregular in shape. There are currently three structures developed at the subject property. 1200 Oakland Road currently has one rectangular single-story garage/storage structure of 1,480 square feet (SF). 1202 Oakland Road is developed with an irregularly shaped single-story 2,075-SF commercial structure. 757 Commercial Street has one 9,960-SF garage-office structure with high ceilings and a limited second story. Paved asphalt parking areas are located on the southeastern and northern portions of 757 Commercial Street, on the north and south sides of 1200 Oakland Road, and on the side south of 1202 Oakland Road.

### **3.3 CURRENT USE OF PROPERTY**

1200 Oakland Road is currently occupied by a Flyers Gas Station. 1202 Oakland Road is occupied by a Blair Glass & Upholstery Shop. 757 Commercial Street is currently occupied by Bay Area Truck Services. The subject property is currently owned by Robinson Oil Corporation.

### **3.3.1 HAZARDOUS MATERIALS MANUFACTURE/USE**

The following small quantities of hazardous materials were observed in the garage area of Bay Area Truck Services (757 Commercial Street): one 100-gallon plastic carboy of antifreeze, one 280 cubic-foot (CF) oxygen cylinder, two 5-gallon propane canisters, and motor oil stored in two 5-gallon buckets, and two 15-gallon drums, and six 55-gallon drums in dispenser ASTs. In addition, the following items were observed in the parts storage room of Bay Area Truck Services: one 55-gallon drum of motor oil, ten 5-gallon buckets of motor oil, two 10-gallon propane canisters, and one 3-gallon gasoline canister. A number of tires and unopened small antifreeze and motor oil jugs were also observed in the parts storage room. Two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST are currently installed at 1200 Oakland Road, operated by The Flyers Gas Station.

### **3.3.2 HAZARDOUS WASTE**

Five 5-gallon buckets of waste antifreeze, one 55-gallon drum filled with used oil filters, one 20-gallon waste oil drum, and seven 5-gallon waste oil buckets were observed in the garage of Bay Area Truck Services. The following items were observed in the exterior storage lot of Bay Area Truck Services: eight 55-gallon waste oil drums, three 55-gallon drums filled with used oil filters, one 55-gallon waste antifreeze carboy, and one 250-gallon waste oil AST. One empty 55-gallon waste oil drum along with two empty 55-gallon motor oil AST dispensers were also observed in the exterior lot.

In addition, two 55-gallon waste oil drums were observed in the fenced storage area of the Flyers Cardlock Station.

## **3.4 DESCRIPTIONS OF STRUCTURES AND IMPROVEMENTS**

### **3.4.1 BUILDING STRUCTURES**

757 Commercial Street, 1200 Oakland Road, and 1202 Oakland Road are each developed with a single structure. The 2,075-SF single-story commercial structure at 1202 Oakland Road and 1,480-SF single-story garage/storage structure at 1200 Oakland Road were built approximately in the early 1960s. The office/garage structure at 757 Commercial Street is approximately 9,960-SF and was originally built in the early 1970s. The office/garage structure also has a limited second story storage area. Building materials are primarily concrete, metal, wood, and floor coverings. Based on the age of the building it is possible that asbestos containing material (ACM) and lead based paint (LBP) are present in building materials. All observed suspect ACMs were in good condition, with the exception of some sections off the hotel basement, and are not expected to pose a health and safety concern to the occupants of the subject property at this time. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Due to age of building materials prior to demolition or renovation of buildings onsite, a lead-based paint and asbestos inspection of all suspect ACM and LBP to be disturbed by the work should be performed by an AHERA and State Certified Asbestos Consultant and a State Licensed Lead Based Paint Consultant. If ACM and/or LBP are found, a Certified Asbestos Consultant and/or State licensed Lead Based Paint Consultant should be engaged to write and implement work procedures and associated Operations and Maintenance Plans, as applicable.

### **3.4.2 INDUSTRIAL EQUIPMENT**

An enclosed parts washing machine, oil filter kiln (cleaning machine), and welding equipment were observed in the garage of Bay Area Truck Services. One forklift was observed in the exterior lot of Bay Area Truck Services. Miscellaneous equipment for fitting and cutting upholstery was observed in the garage of Blair Glass & Upholstery.

### **3.4.3 PARKING**

Paved asphalt parking areas are located on the southeastern and northern portions of 757 Commercial Street, on the north and south sides of 1200 Oakland Road, and on the side of 1202 Oakland Road.

### **3.4.4 ROADWAYS**

The subject property is located on the north side of Commercial Street and on the east side of Oakland Road.

### **3.4.5 FENCING**

Chain-link fencing surrounds an exterior storage area behind the small structure at 1200 Oakland Road, and the rear storage area at 757 Commercial Street. Fencing also runs along the north and south sides of 1202 Oakland Road.

### **3.4.6 EASEMENTS**

According to a preliminary title report completed by First American Title Company National Commercial Services originally dated April 9, 2014, updated on April 15, 2014, there are no easements affecting the subject property other than easements for public utilities.

### **3.4.7 WELLS**

There were no wells observed at the subject property during the site inspection.

However, one well was installed on the eastern exterior of 757 Commercial as part of a previous LUST case. The case was granted regulatory closure status in 1994. The well appears to have been destroyed.

In addition, a total of seven groundwater monitoring wells were previously at 1200 Oakland Road. There are two former LUST cases associated with 1200 Oakland Road, which were granted regulatory closure status in 1998 and 2012, respectively. All groundwater monitoring wells at 1200 Oakland Road have been destroyed.

Refer to Sections 4.6, 5.1, and 5.2.7 of this report for additional details regarding sampling and analytical data from groundwater monitoring wells formerly installed at the subject property.

### **3.4.8 SUMPS**

There were no sumps observed at the subject property during the site inspection.

### **3.4.9 DITCHES**

There were no ditches observed at the subject property.

#### **3.4.10 CATCH BASINS**

There are no catch basins on the subject property.

#### **3.4.11 SEWAGE SYSTEM**

The property is connected to the city sewage system.

#### **3.4.12 POTABLE WATER SYSTEM**

The subject property is provided potable water by San Jose Water Company.

#### **3.4.13 WASTE WATER SYSTEM**

The subject property does not generate wastewater except sewer discharge into the sanitary sewer system.

#### **3.4.14 SOLID WASTE**

The subject property does not generate any solid waste, with the exception of sanitary garbage and used oil filters from the auto repair business at 757 Commercial Street.

### **3.5 CURRENT USES OF NEIGHBORING PROPERTIES**

Areas surrounding the subject property are currently residential, commercial, and light industrial. 775 Commercial Street, located adjacent east of the Site, is currently occupied by a DirectTV office. 1212 Oakland Road, located adjacent to the north of the Site, is currently occupied by Trailer Tel RV Park. 1080/1090 Oakland Road, located south across the street from the Site, is currently occupied by A-1 Lumber Yard. 1135 Oakland Road, located southwest across the street from the site, is currently occupied by White Way Motel. 1181 Oakland Road, located west cross the street from the Site, is currently occupied by Burger King. 738 Commercial Street, located south-southeast across the street from the Site, is currently occupied by Phatco Trading, a wholesale hair and jewelry retailer, Fantasy Party Supply, and GTEX, a fabric store. 752 Commercial Street, located southeast across the street from the Site, is currently occupied by Purple Lotus Patient Center, a medical cannabis dispensary.

---

## **4.0 USER PROVIDED INFORMATION**

---

### **4.1 TITLE RECORDS**

EIS reviewed a Preliminary Title Report for the subject property completed by First American Title Company National Commercial Services originally dated April 9, 2014, updated on April 15, 2014. The report shows that the property was vested in “Nola Family Limited Partnership, as to Parcels One and Three; Sebastian Nola, surviving Trustee under Trust dated November 30, 1982, as to Parcels Five and Six.” The subject property is currently owned by Robinson Oil Corporation.

## **4.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS**

According to the property representative and preliminary title report, there are no known environmental liens associated with the subject property.

## **4.3 SPECIALIZED KNOWLEDGE**

Mr. Dave Mordick, a representative of the subject property, stated that two in-ground hydraulic vehicle hoists were previously installed in the small structure at 1200 Oakland Road. The small dirt and gravel area on the southwest part of 1200 Oakland Road (formerly 751 Commercial Street) was previously a city street.

## **4.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION**

A gas station, auto repair shop, and an upholstery shop currently operate at the subject property. The property is currently owned by Robinson Oil Corporation

## **4.5 VALUATION REDUCTIONS FOR ENVIRONMENTAL ISSUES**

The owner stated no valuation reduction for environmental issues.

## **4.6 PREVIOUS REPORTS**

EIS reviewed SCCDEH regulatory LUST case closure documents for 1200 Oakland Road and 757 Commercial Street.

The former LUST case at 757 Commercial Street was opened in 1988 while the address was occupied by South Bay Mack Truck. A single 1,000-gallon steel UST containing gasoline was removed from the eastern exterior of 757 Commercial Street on February 5, 1988. The closure letter indicates that the tank was installed in approximately 1971. Four soil samples were collected from beneath the former tank pit area. Laboratory results revealed concentrations of TPHg at 22,000 ppm, benzene at 22 ppm, toluene at 850 ppm, ethylbenzene at 390 ppm, and xylenes at 940 ppm in a soil sample in collected near the product end of the former tank from a depth of 8.3 ft. The three other samples contained either very low or non-detectable concentrations of TPHg and xylenes, with no detectable concentrations of benzene, toluene, or ethylbenzene. According to the closure letter document, impacted soil was used to backfill the tank pit after removal. One monitoring well was installed directly to the north of the former UST area in mid-1991. Soil samples collected at depths of 5.5 ft., 10.5 ft., 15.5 ft., and 20.5 during well drilling contained no detectable concentrations of BTEX or TPHg. Six quarters of groundwater monitoring were conducted. On December 12, 1991, the 2<sup>nd</sup> groundwater monitoring event revealed concentrations of benzene at 4.7 ppb, toluene at 2.1 ppb, ethylbenzene at 7.8 ppb, and xylenes at 8.0 ppb, with no detectable concentrations of TPHg. There were no detections of BTEX or TPHg during any of the other five monitoring events. To assess the potentially impacted soil that was used to backfill the pit, six soil samples were collected (three from backfill, three from native soil) at depths of 5, 10, and 16 ft. bgs, none of which contained

detectable concentrations of TPHg or BTEX. SCCDEH granted the LUST case at 757 Commercial Street regulatory closure on January 19, 1994. The closure letter recommendations stated: "The disposal of contaminated soil detected at the time of the tank removal is unclear. However, subsequent soil samples collected in the backfill, beneath the excavation, and at the boundaries of the excavation, have not confirmed that significant soil contamination is present. In addition, the results of four consecutive sampling events have not detected petroleum hydrocarbon contamination. Minor levels of soil contamination may remain at the site but do not appear to present a threat to groundwater quality beneath the site."

The earliest LUST case at 1200 Oakland Road was opened in October 1993 following the removal of two 5,000-gallon diesel USTs and two gasoline USTs of 7,500 and 8,000-gallons from the Beacon Service Station. The four USTs were installed on the northern portion of 1200 Oakland Road, in the same approximate area of the Site's current USTs. Fuel dispensers were also located in the same approximate area as present day. During the removal, a hole was observed in one of the diesel tanks. Subsequent soil samples collected from the tank pit and dispenser area revealed concentrations of TPHg at 720 ppm, TPHd at 1,700 ppm, and benzene at 1.5 ppm. The tank pit was over-excavated to a depth of 25 feet (ft.). Associated product piping was also removed and pipe trenches were over-excavated a depth of 20 ft. bgs. The over-excavation work removed a cumulative 1,250 cubic yards, which was disposed of at an appropriate offsite landfill. Installation of four monitoring wells (designated MW-1 through MW-4) and grab groundwater borings in 1994 and 1995 revealed maximum concentrations of TPHg at 9,200 ppb, TPHd at 400 ppb, benzene at 510 ppb, toluene at 310 ppb, ethylbenzene at 840 ppb, and xylenes at 2,500 ppb. Naturally occurring arsenic was also detected in two of the wells at 110 and 120 ppb. Three grab groundwater samples were collected from approximately 150 ft. to the northwest of the UST area. Analysis of the three samples revealed no detectable concentrations of TPH, TPHd, or benzene. The Beacon Service Station LUST case was granted regulatory closure status by SCCDEH on January 15, 1998. The associated closure letter stated, "Based upon the results of source removal and confirmation sampling, residual petroleum hydrocarbon contamination remains in soil (800 ppm TPHg, 76 ppm TPHd, and 0.59 benzene). Groundwater has also been impacted (1,100 ppb TPHg, 370 ppb TPHd, 36 ppb MTBE, and no benzene); however, dissolved concentrations have reduced significantly and groundwater monitoring trends appear to show active attenuation of the dissolved plume and will achieve water quality objectives through natural attenuation." The four monitoring wells were destroyed in an indeterminate year following the case closure.

An additional LUST case was opened at 1200 Oakland Road in 2003 while the site was occupied by Nella Oil Company from (a precursor company of Flyers Service Station) service station. Nell Oil Company was a tenant of the site from at least 1995 to 2007. This more recent LUST case was opened after the State Regional Water Quality Control Board (RWQCB) requested an investigation to assess potential MTBE impacts at the Site due to the presence of a drinking water supply well located approximately 500 feet to the southwest. In 2003, 1200 Oakland Road had two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST, which still exist in present day. Eight grab groundwater samples were collected from up-gradient, cross-gradient, and down-gradient locations throughout the Site in July 2003. Analytical results revealed maximum concentrations of MTBE at 690 ppb and TBA at 890 ppb in groundwater samples collected downgradient of the USTs and

dispensers. Three monitoring wells (designated MW-5 through MW-7) were advanced on-site in December 2005 in down-gradient and cross-gradient positions relative to the USTs and dispensers. Several soil samples were collected during the well installations, revealing maximum concentrations of TPHg at 330 ppm, TPHd at 38 ppm, MTBE at 0.05 ppm, and TBA at 0.23 ppm. The first subsequent round of groundwater monitoring revealed maximum concentrations of 1,200 ppb TPHg, 170 ppb MTBE, and 240 ppb TBA, along with low concentrations of benzene, ethylbenzene, xylenes, and 1,2-DCA. In February 2012, groundwater monitoring revealed 30 ppb TPHg, 120 ppb MTBE, and 380 ppb TBA in well MW-6, located directly to the west of the USTs and north of the dispenser islands. MTBE and TBA were also both detected at 12 ppb in well MW-7, located northwest of the UST area and north of the dispensers. The Nella Oil Company case at 1200 Oakland Road was granted regulatory closure by SCCDEH on June 22, 2012. The closure letter summary stated that TPHg, MTBE, and TBA concentrations in site groundwater are unlikely to impact indoor air, and that residual impacts in soil are “confined to depths of 20 ft. bgs, therefore they do not pose a direct contact, inhalation, and ingestion risk to human receptors).” The closure letter also states that residual subsurface contamination appears to declining due to prior remedial work and natural attenuation. The letter concludes, “The Department of Environmental Health believes that residual soil and groundwater contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment.”

The three closed LUST cases associated with the subject property represent a controlled recognized environmental concern.

#### **4.7 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION**

The current site tenants are Blair Auto Glass & Upholstery, Flyers Gas Station, and Bay Area Truck Services.

#### **4.8 REASON FOR PERFORMING PHASE I**

The Phase I is being performed as part of the anticipated redevelopment of the property.

---

### **5.0 RECORDS REVIEW**

---

#### **5.1 STANDARD ENVIRONMENTAL RECORD SOURCES**

A database search was conducted of the site and all surrounding sites by Environmental Record Search, Inc. (ERS). ERS database search distances were in accordance to the ASTM E 1527 standard.

The National Priorities List Liens (NPL-Liens), Emergency Response Notification System (ERNS), US Institutional Controls and US Engineering Controls Registries lists were searched for the Subject Property.

The RCRA Generator, Underground Storage Tank (UST), and Hazardous Waste Information Summary (HWIS) lists were searched for the Subject Property and adjacent sites.

The Tribal Underground Storage Tank (Tribal UST) list was searched within a ¼ mile radius of the Subject Property.

The following lists were searched for a ½ mile radius of the Subject Property: Tribal Leaking Underground Storage Tank (Tribal LUST), Leaking Underground Storage Tank (LUST), Spills, Leaks, Investigations, and Cleanup (SLIC), Solid Waste Information System-Solid Waste Landfill, Incinerator or Transfer Station (SWF/LF or SWIS), BROWNFIELDS, Comprehensive, Environmental Response, Compensation and Liability Information System (CERCLIS), Compensation and Liability Information System- No Further Remedial Action Planned (CERCLIS- NFRAP), RCRA Transporters, Storage and Disposal (RCRA TSD) and De- Listed National Priorities List (De- Listed NPL).

The following lists were searched within a one-mile radius of the Subject Property: National Priorities List (NPL), Corrective Action Report (RCRA CORRACTS), CAL SITES, Department of Toxic Substances Control's Site Mitigation and Brownfields Reuse Program (ENVIROSTOR), Department of Defense Site (DOD) and Records of Decision (ROD) sites.

Agency List	Search Radius	Number of Sites
ERNS	Site	0
NPL-Liens	Site	0
US Institutional Controls	Site	0
US Engineering Controls	Site	0
RCRA Generator	Site & Adjacent	1 (Site), 2 (Adjacent)
UST	Site & Adjacent	1 (Site)
Historical UST	Site & Adjacent	1 (Site), 2 (Adjacent)
HWIS	Site & Adjacent	1 (Site), 1 (Adjacent)
Tribal UST	¼ mile	0
Tribal LUST	½ mile	0
LUST	½ mile	1 (Site), 1 (Adjacent), 53
SLIC	½ mile	1 (Site), 1 (Adjacent), 18
SWF/LF (SWIS)	½ mile	3
SWRCY	½ mile	5
BROWNFIELDS	½ mile	0
CERCLIS	½ mile	0
CERCLIS – NFRAP	½ mile	4
RCRA non-CORRACTS TSD	½ mile	2
De-listed NPL	½ mile	0
NPL	1 mile	0

State & Tribal Equivalent NPL	1 mile	2
RCRA CORRACTS	1 mile	4
CAL SITES Hist	¼ mile	0
ENVIROSTOR	1 mile	7
DOD	1 mile	0
ROD	1 mile	1

According to the environmental database list review there are two RCRA Generator sites, two off-site Historical UST sites, and one off-site HWIS listings at addresses adjacent to the subject property. There are 54 off-site LUST cases, 19 off-site SLIC sites, three SWIS sites, five SWRCY sites, four CERCLIS-NFRAP sites, and two RCRA non-CORRACTS TSD sites within a ½-mile radius of the subject property, along with two State/Tribal Equivalent NPL sites, four RCRA CORRACTS sites, seven Envirostor sites, and one ROD site within a one-mile radius of the subject property.

**RCRA Generator:** Neighboring properties 775 Commercial Street and 1090 Oakland Road, respectively located east and south across the street from the subject property, are listed on the RCRA-SQG database. The tenant for the 775 Commercial Street listing is Cupertino Electric Inc. 1090 Oakland Road’s tenant is listed as Economy Auto Center. Each address was listed as a small quantity generator of hazardous waste. Neither facility was listed for transporting, processing, recycling, refining, or burning used oil. No additional information is provided in the listings. Based on the down-gradient position and inferred small quantity of generated waste, the RCRA-SQG listings at 775 Commercial Street and 1090 Oakland Road are considered unlikely to impact the subject property, and do not represent an offsite recognized environmental concern.

**Historical UST:** Neighboring properties 775 and 738 Commercial Street, respectively east and south-southeast across the street from the subject property, appear on the Historical UST database. 775 Commercial Street is currently used as a DirectTV office, while 738 Commercial Street is currently occupied by Phatco Trading. However, each property had at least one UST in 1988 according to RWQCB Hazardous Substance Storage Container Information documents. The 1988 listing denotes that 775 Commercial Street appears to have had one waste oil UST, and was occupied by IBG International Inc. at the time of the listing. No additional information was provided by the listings. The possible historical presence of a UST directly up-gradient of the subject property at neighboring address 775 Commercial Street represents a potential offsite environmental concern.

**HWIS:** There is one neighboring HWIS site listed at 775 Commercial Street, adjacent to the east of the subject property. 775 Commercial Street, located adjacent east of the subject property, is listed during tenancies of Wells Fargo Bank and Cupertino Electric Inc. Wells Fargo Bank is listed for recycling 5 tons of empty 30-gallon sized containers. During tenancy by Cupertino Electric Inc. the site was listed for transferring 0.042 tons to 0.44 tons of an aqueous solution with total organic residues less than 10% and an unspecified organic liquid mixture from 1994 to 2003. In 1997 the site disposed of 0.31 tons of liquids with halogenated organic compounds and in 1999 the site disposed of 1.2 tons of an unspecified organic liquid mixture. In addition, in 1999 the site recycled 4.3 tons of waste oil and mixed oil and treated 0.41 tons of an aqueous solution with total organic residues less than 10%. In 2006, the site is listed for fuel blending 0.4 tons of an unspecified solvent mixture and 0.05

tons of waste oil and mixed oil, storing 0.15 tons of an unspecified solvent mixture, 0.15 tons of waste oil and mixed oil, 0.1 tons of adhesives, 0.025 tons of aged or surplus organics, 0.05 to 0.95 tons of other organic solids, 0.01 tons of an unspecified alkaline solution, and neutralizing 0.06 tons of an unspecified aqueous solution. In 2010, the site disposed of 21.24 tons of contaminated soil from site clean-up. Based on the low quantities of hazardous wastes generated and the current use of the property as a DirectTV office, the HWIS listing is considered unlikely to impact the subject property, and is not likely to represent an off-site environmental concern.

**LUST:** According to the list review, there are 54 off-site LUST cases located within a 1/2-mile radius of the subject property, 48 of which have been granted regulatory closure status.

The nearest offsite LUST case is listed at 1181 Oakland Road, located west across the street from the subject property. The local hydraulic gradient is interpreted to be west and northwest. The property has been occupied by a Burger King Restaurant since 1990. Prior tenants of the property included freight service and trucking transportation businesses. One 12,000-gallon gasoline UST and one 2,000-gallon diesel UST were removed from the site in July 1985. Soil samples collected immediately after the tank removal revealed elevated concentrations of TPHg at 8,700 ppm and TPHd at 27 ppm. TPHd was later detected in a 2010 soil sample at 2,300 ppm. Closure documentation stated that in 1985, "It is reported that soil was excavated, however the volume and area were not reported." Collection of grab groundwater samples from the property in 1997 revealed a TPHg concentration of 31,000 ppb and TPHd at 350,000 ppb. Benzene was also detected in site soil at 2.8 ppm. Four groundwater monitoring wells were installed at the property in 1999 and a monitoring program was initiated. A dual phase extraction test was conducted in December 2004, removing approximately 2,000 gallons of groundwater. Additional groundwater and soil samples were collected in 2008 and 2010, which reported steeply declining TPHg and TPHd impacts in the downgradient direction (west). The final round of groundwater monitoring was conducted in June 2011, revealing maximum concentrations of TPHg at 1,500 ppb, TPHd at 3,900 ppb, benzene at 18 ppb, and low concentrations of toluene, ethylbenzene, xylenes, and MTBE. SCCDEH granted 1181 Oakland Road regulatory closure status in February 2012, stating that the site is fully characterized, that is not a risk to indoor air, and that contaminant had been mitigated as much as feasibly possible and are likely to naturally attenuate over time. Based on the distance from the Site, downgradient location, and regulatory closure status, the closed LUST case at 1181 Oakland Road is considered unlikely to impact the subject property, and does not represent an offsite recognized environmental concern. The case closure summary also notes that the concentration of MTBE detected in one of the wells may be attributed to an offsite source.

The nearest open LUST case is listed at 1020 Berryessa Road, located approximately 0.39 miles east of the subject property. The site currently operates as a Chevron Bulk Fuel Terminal, a fuel transfer station, that receives and stores refined petroleum-hydrocarbon products from the Chevron Richmond Refinery by pipeline. In addition, the site was formerly occupied by Abbott Oil Company. Historically the site has stored unleaded gasoline, diesel, jet fuel, heating oil, kerosene, MTBE, and ethanol. Several spills were reported between February 1984 and July 1986. Remedial work for the site consisted of soil vapor extraction from 1990 to 1996, implementation of a manual light non-aqueous phase liquid removal program in 1999, a groundwater extraction and treatment system from March to September 2000, and a combined soil vapor/air-sparging system from 2006 to 2009.

Based on the results of the latest groundwater monitoring event, conducted in August 2012, the furthest off-site monitoring well MW-6 (approximately 0.14 miles northwest of the property) contained no detectable concentrations of TPHd, TPHg, benzene, or MTBE. Based on the extensive characterization of the site, results of the latest groundwater monitoring event, and distance from the subject property, the open LUST case listed at 1020 Berryessa Road is considered unlikely to impact the subject property, and does not represent an offsite recognized environmental concern. This site is also listed as an open SLIC case.

Based on the distances of greater than 0.4 miles, down-gradient locations, and/or extensive characterization and remediation, the remaining 52 LUST cases are considered unlikely to impact the subject property, and are not likely to represent an off-site recognized environmental concern.

**SLIC:** There are 19 off-site SLIC sites located within a ½-mile radius of the subject property, 15 of which have been granted regulatory closure status.

The nearest closed SLIC site is listed at 1181 Oakland Road, located adjacent west across the street from the subject property. Refer to the “LUST” subsection in Section 5.1 of this report for a full description of the site history. The SLIC case at 1181 Oakland Road does not represent an offsite recognized environmental concern.

An additional closed SLIC site is listed at 1177 N. 15th Street, located approximately 0.11 miles west of the subject property. The property is listed during tenancy of Industrial Tool & Supply Company. The case opened in 1989 following the removal of two 1,000-gallon gasoline tanks and associated piping. Holes were discovered in the tanks and piping during the excavation. Approximately 1,500 cubic yards of soil was treated and used as backfill in 1991. In addition, 5-gallons of a biological additive was added to the pit water. Based on the distance, down-gradient position, and regulatory case closure status, the site is considered unlikely to impact the subject property and not likely to represent an off-site recognized environmental concern.

The nearest open SLIC site is listed at 1021 Berryessa Road, located approximately 0.38 miles east of the subject property. The site is listed under Clean Harbors San Jose, LLC, formerly Solvent Services. The site currently operates as a chemical waste storage, treatment, and recycling facility. Extremely high concentrations of volatile organic compounds (VOCs) including trichloroethene, vinyl chloride, and 1,4-dioxane have been detected in soil and groundwater beneath the site building. Several soil, groundwater, and soil vapor investigations and remedial actions have been conducted since 1983. Based on a 2016 Annual Groundwater Monitoring Report dated January 2017, completed by Cameron-Cole, the groundwater contaminant plume appears to be migrating to the northwest, with the lateral extent of the plume not extending beyond the northwestern corner of 918 Commercial Street (approximately 1,000 feet to the east of the subject property). Based on the distance from the subject property, defined edge of the plume, and extensive characterization and remediation, the open SLIC site at 1021 Berryessa Road is considered unlikely to impact the subject property, and does not represent an off-site recognized environmental concern.

Based on the distances from the Site, downgradient locations, and/or regulatory closure statuses, the other 16 SLIC sites are considered unlikely to impact the subject property, and do not represent an offsite recognized environmental concern.

**SWIS:** There are three SWIS sites located within a ½-mile radius of the subject property. Based on the distances of at least 0.25 miles and/or down-gradient locations, all three SWIS sites are considered unlikely to impact the subject property, and are not likely to represent an offsite environmental concern.

**SWRCY:** There are five SWRCY sites located within a ½-mile radius of the subject property. Based on the distances and/or down-gradient locations, the five SWRCY sites are considered unlikely to impact the subject property, and do not represent an offsite environmental concern.

**CERCLIS-NFRAP:** There are four CERCLIS-NFRAP sites located within a ½-mile radius of the subject property. Based on the distances, down-gradient locations, and no requirement for further remedial action, the four CERCLIS-NFRAP sites are considered unlikely to impact the subject property, and do not represent an offsite recognized environmental concern.

**RCRA non-CORRACTS TSD:** There are two RCRA non-CORRACTS TSD sites located within a ½-mile radius of the subject property. Based on the distance and/or location relative to the Site, neither listing is considered likely to impact the subject property, and are not considered an offsite recognized environmental concern.

**STATE & TRIBAL EQUIVALENT NPL:** There are two State/Tribal Equivalent NPL sites located within a one-mile radius of the subject property. Both sites are situated in a down-gradient position and at least 0.38 miles away from the subject property. On the basis of this data, the two State/Tribal Equivalent NPL sites are considered unlikely to represent a significant environmental concern.

**RCRA CORRACTS:** There are four RCRA CORRACTs sites located within a one-mile radius of the subject property. The nearest RCRA CORRACTs site is listed at 1021 Berryessa Road, located approximately 0.38 miles east of the subject property. Refer to the “SLIC” subsection in Section 5.1 of this report for a full description of the site.

Based on the distances and down-gradient positions, the remaining three RCRA CORRACTS listings are considered unlikely to represent a significant environmental concern.

**ENVIROSTOR:** There are seven Envirostor sites listed within a one-mile radius of the subject property. The nearest Envirostor site is listed at 1021 Berryessa Road, located approximately 0.38 miles east of the subject property. Refer to subsection “SLIC” of this report for a full description of the site.

The remaining six Envirostor sites are located at least 0.42 miles away in a down-gradient position from the subject property. On the basis of this data, the six Envirostor listings are considered unlikely to impact the subject property, and do not represent an offsite recognized environmental concern.

**ROD:** 1021 Berryessa Road, located approximately 0.38 miles east of the subject property is listed as a ROD site. Refer to the “SLIC” subsection in Section 5.1 of this report for a full description of the site.

## **SUBJECT PROPERTY**

The subject property is listed under a number of environmental databases including County-UST-CA, Historical-UST, HWIS, County-LUST-Closed-CA, RCRA-SQG, Hist-Regional-SLIC-CA databases, and miscellaneous other historical site listings. The majority of these the database listings pertain to former LUST cases at the subject property.

A closed LUST case is associated with 757 Commercial Street. There are also two closed LUST cases associated with 1200 Oakland Road (occasionally referred to as 751 Commercial in the ERS Database Report).

The former LUST case at 757 Commercial Street was opened in 1988 while the address was occupied by South Bay Mack Truck. A single 1,000-gallon steel UST containing gasoline was removed from the eastern exterior of 757 Commercial Street on February 5, 1988. The closure letter indicates that the tank was installed in approximately 1971. Four soil samples were collected from beneath the former tank pit area. Laboratory results revealed concentrations of TPHg at 22,000 ppm, benzene at 22 ppm, toluene at 850 ppm, ethylbenzene at 390 ppm, and xylenes at 940 ppm in a soil sample in collected near the product end of the former tank from a depth of 8.3 ft. The three other samples contained either very low or non-detectable concentrations of TPHg and xylenes, with no detectable concentrations of benzene, toluene, or ethylbenzene. According to the closure letter document, impacted soil was used to backfill the tank pit after removal. One monitoring well was installed directly to the north of the former UST area in mid-1991. Soil samples collected at depths of 5.5 ft., 10.5 ft., 15.5 ft., and 20.5 during well drilling contained no detectable concentrations of BTEX or TPHg. Six quarters of groundwater monitoring were conducted. On December 12, 1991, the 2<sup>nd</sup> groundwater monitoring event revealed concentrations of benzene at 4.7 ppb, toluene at 2.1 ppb, ethylbenzene at 7.8 ppb, and xylenes at 8.0 ppb, with no detectable concentrations of TPHg. There were no detections of BTEX or TPHg during any of the other five monitoring events. To assess the potentially impacted soil that was used to backfill the pit, six soil samples were collected (three from backfill, three from native soil) at depths of 5, 10, and 16 ft. below ground surface (bgs), none of which contained detectable concentrations of TPHg or BTEX. SCCDEH granted the LUST case at 757 Commercial Street regulatory closure on January 19, 1994. The closure letter recommendations stated: "The disposal of contaminated soil detected at the time of the tank removal is unclear. However, subsequent soil samples collected in the backfill, beneath the excavation, and at the boundaries of the excavation, have not confirmed that significant soil contamination is present. In addition, the results of four consecutive sampling events have not detected petroleum hydrocarbon contamination. Minor levels of soil contamination may remain at the site but do not appear to present a threat to groundwater quality beneath the site."

The earliest LUST case at 1200 Oakland Road was opened in October 1993 following the removal of two 5,000-gallon diesel USTs and two gasoline USTs of 7,500 and 8,000-gallons from the Beacon Service Station. The four USTs were installed on the northern portion of 1200 Oakland Road, in the same approximate area of the Site's current USTs. Fuel dispensers were also located in the same approximate area as present day. During the removal, a hole was observed in one of the diesel tanks. Subsequent soil samples collected from the tank pit and dispenser area revealed concentrations of TPHg at 720 ppm, TPHd at 1,700 ppm, and benzene at 1.5 ppm. The tank pit was over-excavated to a depth of 25 feet (ft.). Associated product piping was also removed and pipe trenches were over-excavated a

depth of 20 ft. bgs. The over-excavation work removed a cumulative 1,250 cubic yards, which was disposed of at an appropriate offsite landfill. Installation of four monitoring wells (designated MW-1 through MW-4) and grab groundwater borings in 1994 and 1995 revealed maximum concentrations of TPHg at 9,200 ppb, TPHd at 400 ppb, benzene at 510 ppb, toluene at 310 ppb, ethylbenzene at 840 ppb, and xylenes at 2,500 ppb. Naturally occurring arsenic was also detected in two of the wells at 110 and 120 ppb. Three grab groundwater samples were collected from approximately 150 ft. to the northwest of the UST area. Analysis of the three samples revealed no detectable concentrations of TPH, TPHd, or benzene. The Beacon Service Station LUST case was granted regulatory closure status by SCCDEH on January 15, 1998. The associated closure letter stated, "Based upon the results of source removal and confirmation sampling, residual petroleum hydrocarbon contamination remains in soil (800 ppm TPHg, 76 ppm TPHd, and 0.59 benzene). Groundwater has also been impacted (1,100 ppb TPHg, 370 ppb TPHd, 36 ppb MTBE, and no benzene); however, dissolved concentrations have reduced significantly and groundwater monitoring trends appear to show active attenuation of the dissolved plume and will achieve water quality objectives through natural attenuation." The four monitoring wells were destroyed in an indeterminate year following the case closure.

An additional LUST case was opened at 1200 Oakland Road in 2003 while the site was occupied by Nella Oil Company service station (a precursor company of Flyers Service Station). Nella Oil Company was a tenant of the site from at least 1995 to 2007. This more recent LUST case was opened after the State Regional Water Quality Control Board (RWQCB) requested an investigation to assess potential MTBE impacts at the Site due to the presence of a drinking water supply well located approximately 500 feet to the southwest. In 2003, 1200 Oakland Road had two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST, which still exist in present day. Eight grab groundwater samples were collected from up-gradient, cross-gradient, and down-gradient locations throughout the Site in July 2003. Analytical results revealed maximum concentrations of MTBE at 690 ppb and TBA at 890 ppb in groundwater samples collected downgradient of the USTs and dispensers. Three monitoring wells (designated MW-5 through MW-7) were advanced on-site in December 2005 in down-gradient and cross-gradient positions relative to the USTs and dispensers. Several soil samples were collected during the well installations, revealing maximum concentrations of TPHg at 330 ppm, TPHd at 38 ppm, MTBE at 0.05 ppm, and TBA at 0.23 ppm. The first subsequent round of groundwater monitoring revealed maximum concentrations of 1,200 ppb TPHg, 170 ppb MTBE, and 240 ppb TBA, along with low concentrations of benzene, ethylbenzene, xylenes, and 1,2-DCA. In February 2012, groundwater monitoring revealed 30 ppb TPHg, 120 ppb MTBE, and 380 ppb TBA in well MW-6, located directly to the west of the USTs and north of the dispenser islands. MTBE and TBA were also both detected at 12 ppb in well MW-7, located northwest of the UST area and north of the dispensers. The Nella Oil Company case at 1200 Oakland Road was granted regulatory closure by SCCDEH on June 22, 2012. The closure letter summary stated that TPHg, MTBE, and TBA concentrations in site groundwater are unlikely to impact indoor air, and that residual impacts in soil are "confined to depths of 20 ft. bgs, therefore they do not pose a direct contact, inhalation, and ingestion risk to human receptors)." The closure letter also states that residual subsurface contamination appears to be declining due to prior remedial work and natural attenuation. The letter concludes, "The Department of Environmental Health believes that residual soil and groundwater contamination at the site

does not pose a continuing, significant threat to groundwater resources, human health, or the environment.”

The three closed LUST cases that associated with the subject property represent a controlled recognized environmental concern.

Ultramar Inc. and Nella Oil Company are associated with the HWIS listings at 1200 Oakland Road (referred to as 751 Commercial Street in the database report). No additional information regarding Ultramar Inc. is provided in the listing. However, Nella Oil Company is listed for transferring 0.23 tons and 0.18 tons of “other organic solids” respectively in 1996 and 1998. In 1994 the site treated 2.3 tons of contaminated soil from site clean-up, respectively. In 2004 and 2005 the site recycled 0.01 tons of “other organic solids” and 0.1 tons of an unspecified organic liquid mixture, treated 0.21 tons of an aqueous solution with total organic residues less than 10%, and 0.18 tons of “other organic solids,” disposed of 0.2 tons of an unspecified oil-containing waste, 0.2 tons of waste oil and mixed oil. In 2011 and 2013 the site is listed for storing 0.55 tons of hydrocarbon solvents and 0.15 tons of other organic solids. In 2014 and 2015 the site is listed for recovering 0.15 tons and 0.37 tons of an unspecified organic liquid mixture, respectively. In addition, the current tenant Bay Area Truck Services at 757 Commercial Street is listed on the HWIS database. The tenant is listed for recycling 1.6 tons of an unspecified organic liquid mixture in 1994, transferring 0.38 tons of an aqueous solution with total organic residues less than 10% in 1995, transferring 0.5 tons of the same aqueous solution in 1996, recycling a total of 0.95 tons of the same aqueous solution in 1997, storing 0.48 tons of waste oil and mixed oil, transferring 0.48 tons of the same aqueous solution and 0.35 tons of an unspecified oil-containing waste in 1998, recycling and transferring 0.37 to 1.1 tons of the same aqueous solution in 1999, recycling 0.77 to 0.45 tons of the same aqueous solution in 2000 and 2001, and lastly recycling 3 tons of waste oil and mixed oil in 2003.

Former 757 Commercial Street occupant Bay Area Mack Truck also appears on the RCRA-SQG database in 1988 and 1996. The listing contains no additional information other than noting that the business generated small quantities of hazardous waste.

## **5.2 PHYSICAL SETTINGS SOURCE(S)**

### **5.2.1 TOPOGRAPHY**

According to the San Jose West Quadrangle, the site is located on the north side of Commercial Street and on the east side of Oakland Road in San Jose, California. The elevation is approximately 68 feet above mean sea level. The local topographic gradient is to the west-northwest.

### **5.2.2 SOILS**

According to previous soil and groundwater investigation reports, the soils underlying the property are clayey sand, and sandy clay.

### **5.2.3 VEGETATION**

Landscaped trees are located on the southern portion of the subject property.

#### **5.2.4 GEOLOGY**

According to the Geologic Map of Santa Clara County, the site is underlain by Holocene aged alluvium deposits.

#### **5.2.5 HYDROLOGY**

Based on local topography and previous soil and groundwater reports on the subject property, the local direction of groundwater flow is predominantly to the west and northwest. Depth to groundwater in area of the subject property is approximately 14-23 ft. bgs according to previous groundwater monitoring reports.

#### **5.2.6 AIR**

The subject property did not appear on any regulatory air resource databases.

#### **5.2.7 SOIL AND GROUNDWATER**

A number of soil and groundwater samples have previously been collected at 1200 Oakland Road and 757 Commercial Street as part of the site investigation for three former LUST cases. One closed LUST case is associated with 757 Commercial Street. The other two closed LUST cases are associated with 1200 Oakland Road (occasionally referred to as 751 Commercial in the ERS Database Report).

The former LUST case at 757 Commercial Street was opened in 1988 while the address was occupied by South Bay Mack Truck. Four soil samples were collected from beneath the former tank pit area. Laboratory results revealed concentrations of TPHg at 22,000 ppm, benzene at 22 ppm, toluene at 850 ppm, ethylbenzene at 390 ppm, and xylenes at 940 ppm in a soil sample in collected near the product end of the former tank from a depth of 8.3 ft. The three other samples contained either very low or non-detectable concentrations of TPHg and xylenes, with no detectable concentrations of benzene, toluene, or ethylbenzene. According to the closure letter document, impacted soil was used to backfill the tank pit after removal. One monitoring well was installed directly to the north of the former UST area in mid-1991. Soil samples collected at depths of 5.5 ft., 10.5 ft., 15.5 ft., and 20.5 during well drilling contained no detectable concentrations of BTEX or TPHg. Six quarters of groundwater monitoring were conducted. On December 12, 1991, the 2<sup>nd</sup> groundwater monitoring event revealed concentrations of benzene at 4.7 ppb, toluene at 2.1 ppb, ethylbenzene at 7.8 ppb, and xylenes at 8.0 ppb, with no detectable concentrations of TPHg. There were no detections of BTEX or TPHg during any of the other five monitoring events. SCCDEH granted the LUST case at 757 Commercial Street regulatory closure on January 19, 1994.

The earliest LUST case at 1200 Oakland Road was opened in October 1993 following the removal of two 5,000-gallon diesel USTs and two gasoline USTs of 7,500 and 8,000-gallons from the Beacon Service Station. Subsequent soil samples collected from the tank pit and dispenser area revealed concentrations of TPHg at 720 ppm, TPHd at 1,700 ppm, and benzene at 1.5 ppm. The tank pit was over-excavated to a depth of 25 feet (ft.). Associated product piping was also removed and pipe trenches were over-excavated a depth of 20 ft. bgs. The over-excavation work removed a cumulative 1,250 cubic yards, which was disposed of at an appropriate offsite landfill. Installation of four monitoring wells (designated MW-1 through MW-4) and grab groundwater borings in 1994 and 1995 revealed maximum

concentrations of TPHg at 9,200 ppb, TPHd at 400 ppb, benzene at 510 ppb, toluene at 310 ppb, ethylbenzene at 840 ppb, and xylenes at 2,500 ppb. Naturally occurring arsenic was also detected in two of the wells at 110 and 120 ppb. Three grab groundwater samples were collected from approximately 150 ft. to the northwest of the UST area. Analysis of the three samples revealed no detectable concentrations of TPH, TPHd, or benzene. The Beacon Service Station LUST case was granted regulatory closure status by SCCDEH on January 15, 1998.

An additional LUST case was opened at 1200 Oakland Road in 2003 while the site was occupied by Nella Oil Company service station (a precursor company of Flyers Service Station). In 2003, 1200 Oakland Road had two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST, which still exist in present day. Eight grab groundwater samples were collected from up-gradient, cross-gradient, and down-gradient locations throughout the Site in July 2003. Analytical results revealed maximum concentrations of MTBE at 690 ppb and TBA at 890 ppb in groundwater samples collected downgradient of the USTs and dispensers. Three monitoring wells (designated MW-5 through MW-7) were advanced on-site in December 2005. Several soil samples were collected during the well installations, revealing maximum concentrations of TPHg at 330 ppm, TPHd at 38 ppm, MTBE at 0.05 ppm, and TBA at 0.23 ppm. Initial groundwater monitoring revealed maximum concentrations of 1,200 ppb TPHg, 170 ppb MTBE, and 240 ppb TBA, along with low concentrations of other VOCs. In February 2012, the following groundwater monitoring revealed 30 ppb TPHg, 120 ppb MTBE, and 380 ppb TBA in well MW-6, located directly to the west of the USTs and north of the dispenser islands. MTBE and TBA were also both detected at 12 ppb in well MW-7, located northwest of the UST area and north of the dispensers. The Nella Oil Company case at 1200 Oakland Road was granted regulatory closure by SCCDEH on June 22, 2012.

The presence of three closed regulatory LUST cases associated with the subject property are considered a controlled recognized environmental concern. For specifics regarding the regulatory comments and closure criteria, refer to Sections 4.6 and 5.1 of this report.

### **5.2.8 FLOOD ZONE**

According to FEMA map information provided by ERS, the subject property is located in “Zone D – Areas with possible but undetermined flood hazards. No flood hazard analysis has been conducted. Flood insurance rates are commensurate with the uncertainty of the flood risk.”

### **5.2.9 SEISMIC**

According to the Geologic Hazard Zones Map of Santa Clara County, no active faults are mapped on the site. Fault rupture is therefore not anticipated. However, the subject property appears to be located in an area labeled State Seismic Hazard Zone - Liquefaction. Strong ground shaking can be expected at the site during moderate to severe earthquakes in the general region.

### **5.2.10 RADON**

Radon gas is a by-product of uranium. The gas forms as uranium molecules eject some protons and neutrons from their nuclei changing first into thorium, then radium, and finally radon. Radon tends to accumulate in uranium-rich metamorphic rocks, glacial moraines and

till deposits derived from uranium-bearing rocks, marine organic shales, soils derived from carbonate rocks, and uranium-containing alluvial sediments deposited by rivers, deltas, lakes, etc. Outgassing of radon has not been identified as a problem in this region of Santa Clara County. According to radon survey results provided by the ERS, the subject property is located within Region 2 with average radon gas at 2 to 4-pico curies per liter of air (pCi/l). The level above which the U.S. Environmental Protection Agency recommends that action be taken to reduce radon levels is 4 pCi/l.

**5.2.11 SENSITIVE ECOLOGICAL AREAS**

There are no sensitive ecological areas located within a ¼-mile radius of the subject property.

**5.2.12 MASS WASTING**

No physical evidence of mass wasting, such as landslides, was observed at the subject property.

**5.3 HISTORICAL USE INFORMATION ON THE PROPERTY**

The historic use of the property was determined by the review of aerial photographs, owner interview, city directories and local agency records. According to the ERS City Directory search that included Pacific Bell phonebooks and Haines Criss Cross City directories, the subject property was occupied by the following tenants:

**1200 Oakland Road (also includes 751 Commercial St. listings)  
 (Subject Property)**

<b>Date</b>	<b>(Subject Property)</b>
2011-Present	Flyers Gas Station
2009	Olympian Service Station
1995-2007	Nella Oil Cardlock
1985-1991	Beacon Cardlock Fuels
1966-1980	Dan’s Shell Service
1949-1961	Address not listed

**1202 Oakland Road  
 (Subject Property)**

<b>Date</b>	<b>(Subject Property)</b>
1970-Present	Blair Auto Glass & Upholstery (sometimes listed with slight name variations)
1966	Produce Palace
1949-1961	Address not listed

**757 Commercial Street  
 (Subject Property)**

<b>Date</b>	<b>(Subject Property)</b>
Present	Bay Area Truck Services
2005-2007	Bay Area Truck Services, Tesi Leasing Inc.
1995-2001	Bay Area Truck Services, Mack Truck Bay Area

1985	Danco Graphics, Leonard & Company Inc., Rozanne Designs, South Bay Concept
1980	Diamond Signs, Inc.
1975	Accu Graphics, Diamond & Signs Inc., Leonard & Company Inc.
1970	Kitz Rental System
1949-1966	Address not listed

**AERIAL PHOTOGRAPHS**

Aerial photographs for the years of 1948, 1956, 1960, 1968, 1974, 1980, 1987, 1993, 1998, 2000, 2006, 2011, 2016 were reviewed to establish prior land use at the site. Photograph dates and corresponding property descriptions are presented in the following table:

<b>Date</b>	<b>Aerial Photograph Property Description</b>
2016	The subject property appears to be developed by a gas station (1200 Oakland Rd), a gravel parking lot (751 Commercial St.), commercial building and storage yard (757 Commercial St.), and a rectangle commercial building (1202 Oakland Rd), as it exists in present day.
2011	There appear to be no significant changes from the 2016 photograph.
2006	There appear to be no significant changes from the 2011 photograph.
2000	The southern portion of the property appears to be used as a parking lot.
1998	There appear to be no significant changes from the 2000 photograph.
1993	There appear to be no significant changes from the 1998 photograph.
1987	There appear to be no significant changes from the 1993 photograph.
1980	Commercial Street appears to run through the former location of the southern portion of 1200 Oakland Road (formerly 751 Commercial Street). There are no other significant changes from the 1987 photograph.
1974	There appear to be no significant changes from the 1980 photograph.
1968	The commercial building at 757 Commercial Street no longer exists and the western portion of the property appears to be used as a storage yard. There appear to be no other significant changes from the 1974 photograph.
1960	The subject property appears as a vacant and undeveloped lot.
1956	The subject property appears as an agricultural field.
1948	There appear to be no significant changes from the 1956 photograph.

**SANBORN FIRE INSURANCE MAPS**

There were no available historical Sanborn Fire Insurance Maps covering the area of the subject property.

**SANTA CLARA COUNTY ENVIRONMENTAL HEALTH**

EIS reviewed Santa Clara County Environmental Health records regarding the subject property on February 20, 2017. Available documents were associated with Flyers Gas Station, Nella Oil Co. Gas Station, Bay Area Truck Services, and Tesi Leasing Inc. Documents included site inspections, UST permits to operate, UST test results, CERS submissions, and hazardous waste applications. Document dates ranged from 1996 to 2016.

The most recent document regarding the subject property, dated June 1, 2016, is a permit to operate three USTs (one 10,000-gallon regular unleaded gasoline tank, one 10,000-gallon mid-grade unleaded gasoline tank, and one 12,000-gallon diesel tank) currently installed at 1200 Oakland Road. The most recent inspection, dated March 2016 for the Flyer's Gas Station, noted the following violations: the hazardous material business plan (HMBP) site plan had missing components, the site did not have a five year operating permit and a designated UST operator at the time of the site visit, and the monitoring equipment was not capable of detecting a leak from all portions of the UST system. All violations were corrected by April 2016. Records also included annual tank tests and UST monitoring certificates from 2011 to 2015; all tanks had passed. An inspection conducted March 2013 noted the following violations: failure to submit/keep a current UST monitoring plan, submittal of an incomplete HMBP plan, and failure to record an unauthorized release from a UST's primary containment. All violations were corrected by May 2013. An inspection dated November 2001, during occupancy by Nella Oil Company, noted that the occupant was not paying hazardous waste fees and was illegally disposing of hazardous waste on the ground. The violations were corrected by December 2013. Records for 1200 Oakland Road (formerly 751 Commercial Street also) included a Remedial Action Completion Certificate dated November 1996, in which a UST of unknown size storing waste oil was removed in March 1987. Sampling was completed by Applied GeoSystems and the only contaminant detected beneath the UST was TCE at 0.6 ppm.

The latest document available, regarding 757 Commercial Street is a CERs submission dated June 2015. The submission notes that Bay Area Truck Services/Tesi Leasing Inc., stored used motor oil in a 500-gallon AST, used ethylene glycol in a 130-gallon non-metal drum, new motor oil in a 550-gallon AST, and new ethylene glycol in a 130-gallon non-metal drum. The latest inspection for the site, completed in May 2014, noted the following violations: an HMBP plan was not established for the facility, improperly labeling of hazardous waste containers, facility did not maintain or operate in a manner to minimized the possibility of a fire, and the 500-gallon used oil tank's secondary containment bin had approximately 5-10 gallons of excess oil spillage. Inspections from 2001 to 2009 noted the same violations of incomplete or unlabeled tanks and drums, daily and weekly inspections of hazardous materials/waste storage were not being completed, and small spills were observed throughout the shop.

## **SUMMARY**

The subject property has been commercial and agricultural. The subject property is currently occupied by Flyers Gas Station at 751 Commercial Street/1200 Oakland Road, Blair Auto Glass & Upholstery at 1202 Oakland Road, and Bay Area Truck Services at 757 Commercial Street. The subject property at 1202 Oakland Road has been occupied by the same glass and upholstery shop since 1970. Prior to operating as a glass and upholstery shop, the building was used as a produce market. The subject property at 757 Commercial Street has been operating as an auto repair shop since 1995. Site inspections for Bay Area Truck Services from 2001 to 2014 note multiple violations including the observations of small spills, improper labeling of hazardous waste tanks/drums and incomplete daily/weekly hazardous waste inspections. In 1991 a 1,000-gallon UST was removed during tenancy of South Bay Mack. Refer to section 4.6 for a full summary regarding the LUST case. Other notable tenants include printing businesses such as Diamond Signs Inc. from 1975 to 1980, and Accu Graphics in 1975. However, there are no documents/evidence regarding the use

or storage of solvents by these tenants. In 1970, the commercial building was occupied by Kitz Rental System. 751 Commercial Street/1200 Oakland Road was first developed as a gas station by Dan’s Shell Service in the early 1960s. In 1993, four USTs were removed and replaced by three new dual-walled USTs. Refer to section 4.6 for a full summary regarding the LUST case. The most recent inspection for the Flyer’s Gas Station in March 2016 noted the following violations: the HMBP site plan had missing components, the site did not have a five year operating permit and a designated UST operator at the time of the site visit, and the monitoring equipment was not capable of detecting a leak from all portions of the UST system. All violations were corrected by April 2016. Records also included annual tank tests and UST monitoring certificates from 2011 to 2015. Based on aerial photographs, the subject property was a vacant and undeveloped lot in 1960 and an agricultural field from at least 1948 through 1956.

The continued use of the property as a fuel service station since the most recent regulatory closure in 2012 represents a recognized environmental concern. In addition, based on the historical agricultural use of the property from at least 1948 through 1956, there is potential that residual pesticides and/or metals are present in Site soil.

#### 5.4 HISTORICAL USE OF NEIGHBORING PROPERTIES

Surrounding property usages were reviewed using aerial photographs and city directories. According to the ERS City Directories report including review of Pacific Bell phone books and Haines Criss Cross City directories, surrounding properties were occupied by the following tenants:

<b>1212 Oakland Road (Adjacent north of the Site)</b>	
<b>Date</b>	
1961-Present	Trailer Tel RV Park
1949-1958	Address not listed

<b>1181 Oakland Road (West across the street from Site)</b>	
<b>Date</b>	
1990- Present	Burger King
1980-1985	Vacant
1975	Southern California Freight Service
1970	Davis Sales & Service, Jessup L Transportation, Tempco Transportation, Victory Transportation
1966	Tri Valley Production, Victory Transportation Company, Rankin D. Company
1961	Air Filter Sales & Services, Interstate Motor Line, Merrifield Truck Company
1958	Orcutt Electric Company
1949-1954	Address not listed

<b>1135 Oakland Road (Southwest across the street from Site)</b>	
<b>Date</b>	
2005-Present	White Way Motel

2000-2001	Hira Patel, White Way Motel
1958-1996	White Way Motel
1949-1954	Address not listed

**1080/1090 Oakland Road  
(South across the street from Site)**

<b>Date</b>	
2005-Present	1080 - A-1 Lumber Company, 1090 - Vacant
1990-2001	1080 – A-1 Lumber Company, Ground Stability, Robert Perry 1090 - Vacant
1985	1080 – A-1 Lumber Company, Ground Stability 1090 – Classic Auto Air, Economy Auto Body
1980	1080 – A-1 Lumber Home Improvement, Ground Stability 1090 – Brakes & Alignment Company, Daryl Lowden
1975	1080 – A-1 Lumber Home Improvement 1090 – Brakes & Alignment Company, Daryl Lowden, Optimist Club
1970	1080 – Hustons Lumber Mart, 1090 – Brakes & Alignment, Daryl Lowden
1966	1080 – Hustons Lumber Mart, 1090 – Brakes & Alignment
1961	1080 – Perrys, 1090 – Gales Safety Service
1958	1080 – Perrys, 1090 – Address not listed
1949-1954	Addresses not listed

**775 Commercial Street  
(Adjacent east of the Site)**

<b>Date</b>	
Present	DirectTV
1991-2007	Ceitronics Southland Industries
1980-1985	IBG International, Inc., Roper I B
1975	IBG International, Inc., Ickes Braun Glass House
1970	Familian Pipe & Supply
1966	Nulaid Foods
1961	Germaines, Inc.
1949-1958	Address not listed

**738 Commercial Street  
(South-southeast across the street from Site)**

<b>Date</b>	
Present	Phatco Trading, Fantasy Party Supply, GTEX
1990-2007	United Furniture Club
1985	Surplus Liquidators
1966-1980	Damco Material Company
1961	Watsons Sales Corporation

1949-1950	Address not listed
-----------	--------------------

<b>752 Commercial Street (Southeast across the street from Site)</b>	
<b>Date</b>	
Present	Purple Lotus Patient Center
2007	MCC Construction Corporation
2005	Master Cabinet
1990-2001	L&N Career Apparel, L&N Uniform Supply Company
1975-1985	L&N Uniform Supply Company
1970	Nevil Storage Company, North American Van Lanes
1961-1966	Nevil Storage Company
1949-1958	Address not listed

**AERIAL PHOTOGRAPHS**

Aerial photographs for the years of 1948, 1956, 1960, 1968, 1974, 1980, 1987, 1993, 1998, 2000, 2006, 2011, 2016 were reviewed. Photograph dates and corresponding surrounding property descriptions are presented in the table below:

<b>Date</b>	<b>Surrounding Property Aerial Photograph Descriptions</b>
2016	All surrounding properties appear to be commercial with the exception of neighboring property to the north, it appears to be a mobile home park.
2011	There appear to be no significant changes from the 2016 photograph.
2006	There appear to be no significant changes from the 2011 photograph.
2000	There appear to be no significant changes from the 2006 photograph.
1998	There appear to be no significant changes from the 2000 photograph.
1993	There appear to be no significant changes from the 1998 photograph.
1987	The neighboring property to the west appears to be developed with a warehouse along the western portion of the property, while the remainder of the property appears to be a vacant storage yard. There appear to be no other significant changes from the 1993 photograph.
1980	The neighboring property to the south of the Site appears to be developed with a different building and neighboring property to the west appears to be storing unidentifiable objects in the storage yard.
1974	There appear to be no significant changes from the 1980 photograph.
1968	Multiple trucks appear to be parked in the storage yard of neighboring property to the west of the subject property.
1960	There appear to be no significant changes from the 1968 photograph.
1956	Neighboring properties to the north, east, and southeast appear to be agricultural fields.
1948	All surrounding properties appear to be agricultural fields with the exception of neighboring properties to the west, southwest, and a portion of neighboring property to the south.

## **SUMMARY**

Areas surrounding the subject property have historically been residential, commercial and light industrial. 775 Commercial Street, located adjacent east of the subject property, is currently a DirectTV office. The property had at least one waste oil UST in 1988 while occupied by IBG International, Inc., according to RWQCB Hazardous Substance Storage Container Information documents. No additional information was included in the listing. The possible historical presence of a UST directly up-gradient of the subject property at neighboring address 775 Commercial Street represents a potential offsite environmental concern. The address was previously occupied by Ceitronics Southland Industries, a mechanical, electrical, and plumbing systems management company from 1991 to 2007 and by IBG International Inc., from 1975 to 1985. Prior occupants included Familian Pipe & Supply and Nulaid Foods. 1212 Oakland Road, located adjacent north of the subject property, has been a trailer RV park since 1961. Neighboring property 1080/1090 Oakland Road, located south across the street from the subject property has been a lumber yard since 1966 in addition to being an automotive supply shop from 1966 to 1985. 1135 Oakland Road, located southwest across the street from the site, has been occupied by White Way Motel since 1958. 1181 Oakland Road, located west across the street from the subject property has been occupied by Burger King since 1990. One 12,000-gallon gasoline UST and one 2,000-gallon diesel UST were removed from the site in July 1985. Refer to the "LUST" subsection in Section 5.1 of this report for a full summary regarding the LUST case. 738 Commercial Street, located south-southeast of the subject property is currently occupied by Phatco Trading, Fantasy Party Supply, and GTEX, and was formerly occupied by United Furniture Club from 1990 to 2007. In 1985, the site was occupied by Surplus Liquidators, an IT liquidator of used electronics. Other tenants of 738 Commercial Street include Damco Material Company from 1966 to 1980, and Watson Sales Corporation in 1961. 752 Commercial Street, located southeast across the street from the site is currently occupied by Purple Lotus Patient Center, a marijuana dispensary but was formerly occupied by MC Construction Corporation in 2007, Master Cabinet in 2005, and L&N Uniform Supply from 1975 to 2001. The site was a storage facility from 1961 to 1970. From 1948 through 1956 all surrounding properties appear to be agricultural fields with the exception of 1181 and 1135 Oakland Road, and the western portion of 1080/1090 Oakland Road.

---

## **6.0 SITE RECONNAISSANCE**

### **6.1 METHODOLOGY AND LIMITING CONDITIONS**

EIS had access to the entire exterior and interior of the subject property, with the exception of the small office/storage structure at 1200 Oakland Road.

### **6.2 GENERAL SITE SETTING**

The subject property is located in San Jose, on the north side of Commercial Street and to the east of Oakland Road.

### **6.3 EXTERIOR OBSERVATIONS**

The subject property is a commercial/industrial lot of approximately 1.61 acres. The subject property is currently developed with three structures, one associated with each address.

1200 Oakland Road, which comprises the western portion of the subject property, is currently occupied by Flyers Gas Station. A small rectangular office/storage structure of approximately 1,480-SF is located on the eastern portion of 1200 Oakland Road. Two 55-gallon waste oil drums were observed in a small fenced area at the rear of the structure. A concrete pad with visible fill port plates located on the northern portion of the service station property indicates the area of three current USTs utilized by Flyers. Four fuel dispensers are located near the center of 1200 Oakland Road.

1202 Oakland Road, which comprises the northwestern subject property area, is developed with one commercial structure of roughly 2,075-SF. Blair Glass and Upholstery is the current tenant. Two metal shipping containers used to store glass and upholstery materials are located on the eastern portion of 1202 Oakland Road's Parking Lot.

757 Commercial Street, which occupies the eastern half of the subject property, is developed with one office/garage structure of approximately 9,960-SF. The building is currently occupied by Bay Area Truck Services. An exterior storage lot is located on the north side of 757 Commercial Street. Numerous large trucks were parked on the lot during the Site visit. One 250-gallon waste oil AST is installed in a small wood and sheet metal shed adjacent to the northwest corner of the garage building. Spilled oil and stains were observed on the floor of the shed. Black staining was also observed on the asphalt adjacent to the shed. One 55-gallon waste antifreeze carboy was also observed near the shed. The following items were also observed on the western edge of the storage lot: eight 55-gallon waste oil drums, three 55-gallon drums filled with used oil filters, one empty 55-gallon waste oil drum, and two abandoned (empty) 55-gallon motor oil AST dispensers. Approximately half of the drums were stored on top of wooden pallets for secondary storage. Stains and liquids with an oily sheen were observed on the grounds and pallets in the drum storage area. One propane-fueled forklift was also parked in the storage lot.

751 Commercial Street is associated with the small dirt and gravel parking area, located on the southwest portion of the subject property. According to the property representative, this area was previously developed as a city street.

### **6.4 INTERIOR OBSERVATIONS**

EIS did not have access to the interior of the small office/storage structure at the Flyers Gas Station. However, the property representative stated that the building is currently used for miscellaneous storage. The representative also stated that two in-ground vehicle lifts were previously removed from the subject property.

Interior areas of 1202 Oakland Road include an office space, garage, and restroom. The garage is used for vehicle glass and upholstery repair. Two small upholstery altering machines were observed in the garage interior, along with miscellaneous parts and tools.

Interior areas of 757 Commercial Street include a lobby, customer desk, repair garage, and parts storage room. The structure has high ceilings to allow clearance for large trucks into

the repair garage. The garage is situated on the western half of the building. The following items were observed throughout the garage area during the site inspection: five 5-gallon buckets of waste antifreeze, one 55-gallon drum filled with used oil filters, one 20-gallon waste oil drum, seven 5-gallon waste oil buckets, one 100-gallon plastic carboy of antifreeze, one 280-CF oxygen cylinder, two 5-gallon propane canisters, and new motor oil stored in two 5-gallon buckets, two 15-gallon drums, and six 55-gallon drums in dispenser ASTs. In addition, a parts washer, oil filter cleaning kiln, and arc welding equipment were stored in the garage. Cracked sections of concrete and numerous stains were observed throughout the garage. The eastern portion of the structure is currently used a parts storage room. Items observed in the parts room included one 55-gallon drum of motor oil, ten 5-gallon buckets of motor oil, two 10-gallon propane canisters, and one 3-gallon gasoline canister. A stack of roughly 18 tires was also stored in the parts room. A limited second story platform located above the parts storage room is used to store paperwork, small quantities of automotive fluids, and miscellaneous parts.

## **6.5 UNDERGROUND STORAGE TANKS**

There are currently two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST operated by Flyers Gas Station at 1200 Oakland Road. All three tanks are made of steel, are dual walled, and have secondary containment made of fiberglass. Continuous tank monitoring equipment is completed by Veeder Root sensors. The most recent testing of the monitoring equipment was completed on March 9, 2016, in which the TLS battery for PM purposes was replaced and approximately 9-gallons of water was removed from the T3-Plus STP Sump. All three tanks had passed the spill bucket test with zero loss.

Historically the site has had multiple USTs. A 1,000-gallon gasoline UST was previously installed in the southwestern corner of 757 Commercial Street. The UST was removed in February 1991. Four USTs, one 8,000-gallon gasoline tank, one 7,500-gallon gasoline tank, and two 5,000-gallon diesel tanks were previously installed in the location of the current USTs at 1200 Oakland Road. The tanks were removed and replaced with the current USTs between October and November 1993. Refer to sections 4.6 and 5.1 for full descriptions of the previous UST investigations conducted at the subject property.

## **6.6 ABOVE GROUND STORAGE TANKS**

Bay Area Truck Services (757 Commercial Street) currently utilizes several ASTs for truck repair business activities. Six 55-gallon motor oil dispenser ASTs are currently installed in the garage interior. One 100-gallon plastic carboy of antifreeze is also stored in the garage. Stains and cracks were observed throughout the garage concrete floor. In addition, Bay Area Truck Services keeps one 250-gallon waste oil AST in its exterior storage lot. The waste oil AST is situated within a wood and sheet metal shed for secondary storage. Spilled oil and stains were observed on the floor of the shed, along with visible black staining around the shed exterior. Two abandoned (empty) 55-gallon motor oil AST dispensers were also observed on the western portion of the lot.

In addition, based on a CERs submission Bay Area Truck Services/Tesi Leasing Inc., stored used motor oil in a 500-gallon AST and new motor oil in a 550-gallon AST in June 2015.

## **6.7 STORAGE**

The subject property currently stores items including waste including antifreeze, motor oil, waste oil, waste antifreeze, gasoline, and diesel fuel. Refer to Sections 3.3.1 and 3.3.2 of this report for a detailed summary of hazardous material/waste quantities and storage locations.

## **6.8 DISPOSAL**

1200 Oakland Road was documented by SCCDEH for improper disposal of hazardous waste in November 2001. Refer the “Santa Clara County Environmental Health” subsection in Section 5.3 of this report for additional details regarding this violation.

---

## **7.0 INTERVIEWS**

### **7.1 INTERVIEW WITH PROPERTY REPRESENTATIVE**

EIS was accompanied during the Site inspection by Mr. Dave Mordick, a representative of the subject property. Mr. Mordick provided a general narrative of the subject property history. He also stated that two in-ground hydraulic vehicle hoists were previously installed in the small structure at 1200 Oakland Road. EIS will include a copy of the useful environmental questionnaire completed by a subject property representative in a forthcoming addendum letter. EIS expects to release the addendum letter within one week of this Phase I ESA’s completion.

---

## **8.0 FINDINGS**

The subject property is approximately 1.61-acres in size and irregular in shape. Addresses currently associated with the subject property are 757 Commercial Street, and 1200/1202 Oakland Road. A structure currently stands at each address. 1200 Oakland Road is currently a Flyers Gas Station with one rectangular single-story garage/storage structure of 1,480 square feet (SF). 1202 Oakland Road is developed with an irregularly shaped single-story 2,075-SF commercial structure presently occupied by Blair Glass & Upholstery. 757 Commercial Street has one 9,960-SF garage-office structure with high ceilings and a limited second story. The building is currently used by Bay Area Truck Services. Oakland Road addresses are situated on the western half of the property, while 757 Commercial Street is located on the eastern half of the Site. In addition, a small dirt and gravel area currently used for vehicle parking is located on the southwestern tip of the property. This area was historically referred to as 751 Commercial Street. On the basis of assessor records and property representative interviews, the “751 Commercial Street” area will simply be considered part of 1200 Oakland Road.

EIS conducted a Site inspection of all interior and exterior subject property areas, with the exception of the small garage/storage structure at 1200 Oakland Road. The Flyer Gas Station at 1200 Oakland Road has two fuel dispenser islands (four dispensers total) installed near the center of the lot. Paved asphalt parking areas are located on the northern and southeastern portions of 1200 Oakland Road. The building interior of 1202 Oakland Road, occupied by Blair Glass & Upholstery, consists of an office, restroom, and garage space

where windows and upholstery are installed in vehicles. Pave asphalt parking areas are located on the south side of the building. Two metal shipping containers located in the parking lot are used to store glass and upholstery materials. Interior areas of 757 Commercial Street (occupied by Bay Area Truck Services) include a repair garage, office, restroom, and parts storage area. Industrial equipment including an enclosed parts washing machine, arc welding equipment, and oil filter cleaning kiln were observed in the repair garage. A private lot on the northern section of 757 Commercial Street is used for storage and truck parking.

During the site inspection, EIS observed several containers of waste oil, used oil filters, motor oil and antifreeze in drums ranging in size from 25-gallons to 55-gallons, one 250-gallon waste oil AST, six 55-gallon new motor oil ASTs, and two empty 55-gallon motor oil ASTs at 757 Commercial Street. Spilled oil and stains were observed on the floor of the small wood and sheet metal shed adjacent to the northwest corner of the garage building and black staining was observed on the asphalt adjacent to the shed. In addition, stains and liquids with an oily sheen were observed on the grounds and pallets in the drum storage area. Specific quantities and types of materials stored at the auto repair shop are listed in sections 3.3.1 and 3.3.2 of this report. The storage and use of petroleum hydrocarbons for auto repair activities and lack of best management practices implementation at 757 Commercial Street represents a recognized environmental concern. In addition, a concrete pad with visible fill port plates located on the northern portion of the service station property indicates the area of the three USTs utilized by Flyers. The gas station currently has two 10,000-gallon gasoline tanks and one 12,000-gallon diesel tank.

The subject property has historically been commercial, light industrial, and agricultural. Each structure currently at the property was built approximately in the early 1960s or 1970s. 1202 Oakland Road has been occupied by the Blair Glass & Upholstery since 1970, and was previously a produce market in the 1960s. 757 Commercial Street has been occupied by Bay Area Truck Services since 1995, with the intermittent shared tenancy of Mack Truck Bay Area and Tesi Leasing Inc. The address was previously occupied by various design and sign printing businesses including Danco Graphics, Diamond Signs, and Accu Graphics between 1975 and 1985. The building was occupied by a rental company in 1970. 1200 Oakland Road has been occupied by various fuel service stations since the mid-1960s. Tenants prior to Flyers Gas Station include Olympian Service Station in 2009, Nella Oil Card Lock from at least 1995 to 2007, Beacon Fuel Cardlocks from at least 1985 to 1991, and Dan's Shell Service from approximately 1966 to 1980. Aerial photographs reveal that the entire subject property was an undeveloped lot in 1960. The subject property was previously an agricultural field from at least 1948 to 1956.

SCCDEH records pertaining to the subject property included UST permits, test results, and hazardous material/waste storage documentation associated with current and previous service stations and Bay Area Truck Services. Notably, Flyers Gas Station was documented for a malfunctioning UST leak monitoring system in March 2016; the violation was corrected as of April 2016. In addition, inspection records for Bay Area Truck Services from 2001 to 2014 noted multiple violations including small spills, improper labeling of hazardous waste tanks/drums, and incomplete daily/weekly hazardous waste inspections. The continued use of 1200 Oakland Road as a service station since the most recent regulatory LUST case closure in 2012 represents a recognized environmental concern.

The subject property is listed under a number of environmental databases including County-UST-CA, Historical-UST, HWIS, County-LUST-Closed-CA, RCRA-SQG, Hist-

Regional-SLIC-CA databases, and miscellaneous other historical site listings. The majority of these the database listings pertain to former LUST cases at the subject property. A closed LUST case is associated with 757 Commercial Street. There are also two closed LUST cases associated with 1200 Oakland Road (occasionally referred to as 751 Commercial in the ERS Database Report). Subject property LUST cases are summarized in the following paragraphs; refer to Sections 4.6, 5.1, and 5.2.7 of this report for a detailed description of each subject property LUST case.

The former LUST case at 757 Commercial Street was opened in 1988 while the address was occupied by South Bay Mack Truck. A single 1,000-gallon steel UST containing gasoline was removed from the eastern exterior of 757 Commercial Street on February 5, 1988. The closure letter indicates that the tank was installed in approximately 1971. Four soil samples were collected from beneath the former tank pit area. Laboratory results revealed concentrations of TPHg at 22,000 ppm, benzene at 22 ppm, toluene at 850 ppm, ethylbenzene at 390 ppm, and xylenes at 940 ppm in a soil sample in collected near the product end of the former tank from a depth of 8.3 ft. The three other samples contained either very low or non-detectable concentrations of TPHg and xylenes, with no detectable concentrations of benzene, toluene, or ethylbenzene. Additional soil samples collected from the tank area revealed no additional detections of TPHg or BTEX. Six quarters of groundwater monitoring were conducted. On December 12, 1991, the 2<sup>nd</sup> groundwater monitoring event revealed concentrations of benzene at 4.7 ppb, toluene at 2.1 ppb, ethylbenzene at 7.8 ppb, and xylenes at 8.0 ppb, with no detectable concentrations of TPHg. There were no detections of BTEX or TPHg during any of the other five monitoring events. SCCDEH granted the LUST case at 757 Commercial Street regulatory closure on January 19, 1994.

The earliest LUST case at 1200 Oakland Road was opened in October 1993 following the removal of two 5,000-gallon diesel USTs and two gasoline USTs of 7,500 and 8,000-gallons from the Beacon Service Station. Multiple rounds of soil and groundwater investigation were subsequently conducted. The Beacon Service Station LUST case was granted regulatory closure status by SCCDEH on January 15, 1998. The associated closure letter stated, "Based upon the results of source removal and confirmation sampling, residual petroleum hydrocarbon contamination remains in soil (800 ppm TPHg, 76 ppm TPHd, and 0.59 benzene). Groundwater has also been impacted (1,100 ppb TPHg, 370 ppb TPHd, 36 ppb MTBE, and no benzene); however, dissolved concentrations have reduced significantly and groundwater monitoring trends appear to show active attenuation of the dissolved plume and will achieve water quality objectives through natural attenuation." The four monitoring wells were destroyed in an indeterminate year following the case closure.

An additional LUST case was opened at 1200 Oakland Road in 2003 while the site was occupied by Nella Oil Company service station, which was a Site tenant from at least 1995 to 2007. This more recent LUST case was opened after the RWQCB requested an investigation to assess potential MTBE impacts at the Site due to the presence of a drinking water supply well located approximately 500 feet to the southwest. In 2003, 1200 Oakland Road had two 10,000-gallon gasoline USTs and one 12,000-gallon diesel UST, which still exist in present day. Eight grab groundwater samples were collected from up-gradient, cross-gradient, and down-gradient locations throughout the Site in July 2003. Analytical results revealed maximum concentrations of MTBE at 690 ppb and TBA at 890 ppb in groundwater samples collected downgradient of the USTs and dispensers. Three monitoring wells (designated

MW-5 through MW-7) were advanced on-site in December 2005 in down-gradient and cross-gradient positions relative to the USTs and dispensers. Several soil samples were collected during the well installations, revealing maximum concentrations of TPHg at 330 ppm, TPHd at 38 ppm, MTBE at 0.05 ppm, and TBA at 0.23 ppm. The first subsequent round of groundwater monitoring revealed maximum concentrations of 1,200 ppb TPHg, 170 ppb MTBE, and 240 ppb TBA, along with low concentrations of other miscellaneous VOCs. In February 2012, the following groundwater monitoring revealed maximum concentrations of 30 ppb TPHg, 120 ppb MTBE, and 380 ppb TBA in a well located northwest of the UST area and north of the dispensers. The Nella Oil Company case at 1200 Oakland Road was granted regulatory closure by SCCDEH on June 22, 2012. The closure letter summary stated that TPHg, MTBE, and TBA concentrations in site groundwater are unlikely to impact indoor air, and that residual impacts in soil are “confined to depths of 20 ft. bgs, therefore they do not pose a direct contact, inhalation, and ingestion risk to human receptors).” The closure letter also states that residual subsurface contamination appears to be declining due to prior remedial work and natural attenuation. The letter concludes, “The Department of Environmental Health believes that residual soil and groundwater contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment.”

The three closed LUST cases associated with the subject property represent a controlled recognized environmental concern.

According to the offsite environmental database list review there are two RCRA Generator sites, two off-site Historical UST sites, and one off-site HWIS listings at addresses adjacent to the subject property. There are 54 off-site LUST sites, 19 off-site SLIC sites, three SWIS sites, five SWRCY sites, four CERCLIS-NFRAP sites, and two RCRA non-CORRACTS TSD sites within a 1/2-mile radius of the subject property, along with two State/Tribal Equivalent NPL sites, four RCRA CORRACTS sites, seven Envirostor sites, and one ROD site within a one-mile radius of the subject property.

The nearest offsite LUST case is listed at 1181 Oakland Road, located west across the street from the subject property. The local hydraulic gradient is interpreted to be west and northwest. The property has been occupied by a Burger King Restaurant since 1990. Prior tenants of the property included freight service and trucking transportation businesses. One 12,000-gallon gasoline UST and one 2,000-gallon diesel UST were removed from the site in July 1985. Soil samples collected immediately after the tank removal revealed elevated concentrations of TPHg at 8,700 ppm and TPHd at 27 ppm (TPHd was later detected in a 2010 soil sample at 2,300 ppm). Closure documentation stated that in 1985, “It is reported that soil was excavated, however the volume and area were not reported.” Collection of grab groundwater samples from the property in 1997 revealed a TPHg concentration of 31,000 ppb and TPHd at 350,000 ppb. Benzene was also detected in site soil at 2.8 ppm. Four groundwater monitoring wells were installed at the property in 1999 and a monitoring program was initiated. A dual phase extraction test was conducted in December 2004, removing approximately 2,000 gallons of groundwater. Additional groundwater and soil samples were collected in 2008 and 2010, which reported steeply declining TPHg and TPHd impacts in the downgradient direction (west). The final round of groundwater monitoring was conducted in June 2011, revealing maximum concentrations of TPHg at 1,500 ppb, TPHd at 3,900 ppb, benzene at 18 ppb, and low concentrations of toluene, ethylbenzene, xylenes, and MTBE. SCCDEH granted 1181 Oakland Road regulatory closure status in

February 2012, stating that the site is fully characterized, that is not a risk to indoor air, and that contaminant had been mitigated as much as feasibly possible and are likely to naturally attenuate over time. Based on the distance from the Site, downgradient location, and regulatory closure status, the closed LUST case at 1181 Oakland Road is considered unlikely to impact the subject property, and does not represent an offsite recognized environmental concern. The case closure summary also notes that the concentration of MTBE detected in one of the wells may be attributed to an offsite source.

In addition, neighboring property 775 Commercial Street, located adjacent to the east of the subject property, appears on the Historical UST database. 775 Commercial Street is currently used as a DirectTV office. The property had at least one waste oil UST in 1988 while occupied by IBG International, Inc., according to RWQCB Hazardous Substance Storage Container Information documents. No additional information was included in the listing. The possible historical presence of a UST directly up-gradient of the subject property at neighboring address 775 Commercial Street represents a potential offsite environmental concern.

There are no additional offsite listings considered likely to represent a significant environmental concern.

---

## 9.0 OPINION

---

In our professional opinion, EIS concludes that this assessment has revealed evidence of recognized environmental concerns associated with the subject property. The assessment has revealed the following:

1. The continued use of 1200 Oakland Road as a fuel service station following the 2012 regulatory LUST case closure represents a recognized environmental concern.
2. The current and historical use of 757 Commercial Street as an auto repair facility for at least 22 years, with the associated use and storage of petroleum hydrocarbons and poor housekeeping practices observed during the site inspection, is considered a recognized environmental concern.
3. The three closed regulatory LUST cases associated with 757 Commercial Street and 1200 Oakland Road represent a controlled recognized environmental concern.
4. Based on the agricultural use of the subject property from at least 1948 through 1956, there is a potential that residual pesticides and/or metals exist in shallow Site soil. If the property is redeveloped for any use other than commercial or industrial, potential pesticide impact should be evaluated further.
5. The documented presence of a waste oil UST in 1988 at the directly up-gradient eastern adjacent property 775 Commercial Street represents a potential offsite environmental concern.

## **10.0 CONCLUSION & RECOMENDATIONS**

---

In the professional opinion of EIS “we have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 2013, this assessment has revealed evidence of recognized environmental concerns in connection with the property.”

## **11.0 DEVIATIONS**

---

No deviations were made from ASTM E 1527-2013.

---

## **12.0 ADDITIONAL SERVICES**

---

No additional services were added to Phase I ASTM 1527-2013 standard scope of work.

---

## **13.0 DATA GAPS**

---

No data gaps were identified.

## **16.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL(S)**

---

Mr. Peter Littman, Project Manager has 20 years of experience managing environmental due diligence investigations as a Cal/EPA Registered Environmental Assessor (#03829) for property transactions including a large variety of commercial, industrial, and agricultural properties.

Mr. Littman excels at assessing property to determine whether further investigations are necessary to ensure compliance with laws or to complete due diligence and estimating the investigation and cleanup costs. He has successfully coordinated and completed numerous complex due diligence investigations within tight budget and time constraints.

Prior to forming EIS in 1996, Mr. Littman provided environmental consulting services for four years. As a Cal/EPA Registered Environmental Assessor, Mr. Littman has performed over 650 Phase 1 Environmental Assessments. As a project manager, he has completed over 120 soil and groundwater investigations, 60 tank removals, 25 soil remediation projects, 80 asbestos inspections, 50 lead paint inspections, and 30 Hazardous Material Management Plans. Mr. Littman has assisted clients in qualifying for the state tank fund and under guidance of professional staff has helped design site characterization and site remediation at tank fund sites.

As a project manager with C.E.T., Inc. he managed tank removal operations, soil and groundwater investigations, and Phase I assessments. He has also held a position as Corporate Health and Safety Officer for EVAX Technologies Inc., an Environmental Engineering/Contracting firm where he performed Phase I's and site safety plans for Hazardous Waste clean-up operations, and conducted Federal OSHA 40 Hour Training Sessions. As a Health & Safety Officer he worked with a team designing underground tank removals, building decontamination of solvents, excavations, soil and groundwater sampling, and installation of remedial equipment.

**Detailed Site Map**

1200/ 1202 Oakland Road & 757 Commercial Street, San Jose, California

**EXPLANATION:**

— Subject property area

**Figure: 2**

EIS Project: 1711-1  
 February 27, 2017

1. View of subject property Flyer Cardlock Station at 1200 Oakland Road, west side of Site.

2. View of storage and former garage station at 1200 Oakland Road.

3. View of rear storage area at 1200 Oakland Road with two 55-gallon drums visible

4. View of UST and dispenser location, 1200 Oakland Road.

5. View of Blair Glass and Upholstery shop at 1202 Oakland Road, northwest side of property.

6. View of glass shop office area.

7. View of garage and workshop interior of glass shop.

8. View of upholstery machines in Blair Glass garage.

9. View of metal containers used to store glass and upholstery supplies, 1202 Oakland Road.

10. View of Bay Area Truck Service at 757 Commercial Street, east portion of subject property.

11. View of office space in 757 Commercial Street interior.

12. View of Bay Area Truck Services main garage interior.

13. View of gas cylinder and welding equipment storage cage.

14. View of filter cleaning machine, north side of truck garage.

15. View of parts cleaning machine in garage.

16. View of 55-gallon motor oil AST, north side of garage.

17. View of 10-gallon motor oil dispenser and three 5-gallon buckets of waste antifreeze in garage.

18. View of drum containing used oil filters, northwest side of site.

19. View of approximately 100-gallon antifreeze container, southeast corner of truck garage.

20. View of motor oil ASTs with capacities for approximately five 55-gallon drums, southwest corner of truck garage.

21. View of motor oil in 5-gallon buckets in parts storage room, east section of 757 Commercial Street.

22. View of catwalk area above parts storage room.

23. View of 757 Commercial Street truck parking and storage area.

24. View of forklift stored in rear truck lot.

25. View of waste oil and waste antifreeze stored in 55-gallon drums, west side of rear truck lot.

26. View of oily sheen observed on wooden pallets and ground near waste oil and antifreeze drums.

27. View of storage shed containing 250-gallon waste oil AST.

28. View of 250-gallon waste oil AST.

29. View of valve and staining beneath AST.

30. View of approximately 55-gallon waste antifreeze carboy. Staining on and adjacent to AST shed is also visible.

31. View of gravel parking lot on southern portion of subject property.

32. View of neighboring property 775 Commercial Street, located adjacent east of the Site.

33. View of neighboring trailer park at 1212 Oakland Road, located adjacent north of the Site.

34. View of neighboring property 1080 Oakland Road, located south across the street from the Site.

35. View of neighboring property 738 Commercial Street, located south-southeast across the street from the Site.

36. View of neighboring property 752 Commercial Street, located southeast across the street from the Site.

37. View of neighboring property 1181 Oakland Road, located west across the street from the Site.

38. View of neighboring property 1135 Oakland Road, located southwest across the street from the Site.

--	---	--

# 1-MILE RADIUS STREET MAP W/OCCURRENCES (MAP1)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Occurrences are shown in three colors to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

## 0.25-MILE RADIUS STREET MAP W/OCCURRENCES (MAP2)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Occurrences are shown in three colors to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

# 1-MILE TOPOGRAPHIC MAP W/OCCURRENCES (MAP3)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Occurrences are shown in three colors to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

## AGENCY DIFFERENCES IN MAPPED LOCATIONS (MAP4)

Note: Occurrences on this map have agency provided coordinates which differ significantly from geocoded locations.

This "AGENCY DIFFERENCES IN MAPPED LOCATIONS (MAP 4)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

## MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP5)

Note: Occurrences on this map are reported in Air Quality databases. Potential air plumes are drawn in the direction of the prevailing wind.

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency/source. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Potential air dispersion plumes are depicted to graphically show the direction contaminants may travel based on prevailing wind data and provide a visual screening tool only. Actual direction will vary especially by season. Depending on the actual contaminant, amount released, and other variables, the distance from the source the contaminant may travel can and will vary. Interpretation and review of all the actual relevant data by an environmental professional is recommended before making any decisions, conclusions or otherwise based on the map depictions, air data, and potential air dispersion plumes.

This "MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP 5)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

### DETAILS

Global ID: T0608512921

County: Santa Clara

Site History: Site address is also 751 Commercial Street, San Jose. 2003 – In February, the Regional Water Quality Control Board (RWQCB) requested an investigation be conducted to determine if MtBE had impacted groundwater at this site due to its location relative to a water supply well. In July, 10 Geoprobe borings (GP1 through GP10) were advanced onsite. Groundwater was not encountered in GP7 and GP8, but was encountered in the remaining borings between 19 and 28 ft bgs. 8 grab groundwater samples were collected and sampled for fuel oxygenates. Maximum concentrations were reported of 690 ppb MtBE and 890 ppb TBA in the sample collected in GP1 located on the northwestern corner of the site and downgradient of the existing tanks. The only other detection was 25 ppb MtBE in GP3, which is located downgradient of the dispenser islands. 2005 – In December, 3 monitoring wells (MW5 through MW7) were installed to 30 ft bgs onsite. It was not reported at what depth groundwater was encountered and was not noted on the boring logs. 6 soil samples were collected from each well and maximum concentrations were reported for soil samples collected from well MW6 located near boring GP3 and well MW7 located between boring GP1 and former well MW1. Maximum concentrations in soil were reported of 330 ppm TPHg and 38 ppm TPHd at 25 ft bgs in MW6 and 0.05 ppm MtBE and 0.23 ppm TBA at 20 ft bgs in MW7. Initial groundwater samples collected from these wells reported maximum concentrations of 1,200 ppb TPHg, 0.64 ppb Benzene, 0.59 ppb Ethylbenzene, 0.61 ppb Xylenes, 170 ppb MtBE, 240 ppb TBA, and 0.51 ppb 1,2-Dichloroethane (1,2-DCA). MtBE was the only constituent detected in all three wells, but was highest in well MW7 (and the highest TBA) and lowest in well MW5. Well MW6 had detections of the most constituents. 2011 – In February, the wells were sampled and reported to have maximum concentrations of 430 ppb TPHg, 120 ppb MtBE, and 380 ppb TBA in well MW6.

Case Type: LUST Cleanup Site

Status: Completed - Case Closed

Lead Agency: SANTA CLARA COUNTY LOP

Case Worker: Not Reported

Local Agency: Not Reported

RB Case Number: Not Reported

Loc Case Number: 06S1E32M12f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water)

How Discovered: Site Assessment/Site Investigation

How Discovered Description: Not Reported

Stop Method: Close and Replace Tank

Stop Method Description: Not Reported

Action Date: 2012-06-22

Action Type: ENFORCEMENT

Action: Closure/No Further Action Letter

Action Date: 2012-05-09

Action Type: ENFORCEMENT

Action: Staff Letter

Action Date: 2012-03-23

## DETAILS

### Sites Details

URL: [http://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0608512921](http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608512921)

Global ID: T0608512921

Case Type: LUST Cleanup Site

Status: Completed - Case Closed

Status Date: 6/22/2012

CUF Case: NO

Lead Agency: SANTA CLARA COUNTY LOP

Case Worker: Not Reported

Local Agency: Not Reported

RB Case Number: Not Reported

Loc Case Number: 06S1E32M12f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water)

Site History: Site address is also 751 Commercial Street, San Jose. 2003 – In February, the Regional Water Quality Control Board (RWQCB) requested an investigation be conducted to determine if MtBE had impacted groundwater at this site due to its location relative to a water supply well. In July, 10 Geoprobe borings (GP1 through GP10) were advanced onsite. Groundwater was not encountered in GP7 and GP8, but was encountered in the remaining borings between 19 and 28 ft bgs. 8 grab groundwater samples were collected and sampled for fuel oxygenates. Maximum concentrations were reported of 690 ppb MtBE and 890 ppb TBA in the sample collected in GP1 located on the northwestern corner of the site and downgradient of the existing tanks. The only other detection was 25 ppb MtBE in GP3, which is located downgradient of the dispenser islands. 2005 – In December, 3 monitoring wells (MW5 through MW7) were installed to 30 ft bgs onsite. It was not reported at what depth groundwater was encountered and was not noted on the boring logs. 6 soil samples were collected from each well and maximum concentrations were reported for soil samples collected from well MW6 located near boring GP3 and well MW7 located between boring GP1 and former well MW1. Maximum concentrations in soil were reported of 330 ppm TPHg and 38 ppm TPHd at 25 ft bgs in MW6 and 0.05 ppm MtBE and 0.23 ppm TBA at 20 ft bgs in MW7. Initial groundwater samples collected from these wells reported maximum concentrations of 1,200 ppb TPHg, 0.64 ppb Benzene, 0.59 ppb Ethylbenzene, 0.61 ppb Xylenes, 170 ppb MtBE, 240 ppb TBA, and 0.51 ppb 1,2-Dichloroethane (1,2-DCA). MtBE was the only constituent detected in all three wells, but was highest in well MW7 (and the highest TBA) and lowest in well MW5. Well MW6 had detections of the most constituents. 2011 – In February, the wells were sampled and reported to have maximum concentrations of 430 ppb TPHg, 120 ppb MtBE, and 380 ppb TBA in well MW6.

Begin Date: 2/6/2003

How Discovered: Site Assessment/Site Investigation

How Discovered Description: Not Reported

Stop Method: Close and Replace Tank

Stop Method Description: Not Reported

Agency Provided Latitude: 37.3654674420295

## DETAILS

Global ID: T0608501160

County: Santa Clara

Site History: The site parcel (APN 237-07-017) is approximately 39,640 square feet in area located in a commercial area of north central San Jose. See Figure 1 for a Site Area Topographic Map and Figure 2 for a Generalized Site Map. An existing restaurant (Burger King) is located in the southcentral area of the parcel. The majority of the lot is paved for customer parking, with limited landscaped areas. Former 12,000-gallon gasoline and 2,000-gallon diesel underground storage tanks (USTs) were located 40 to 50 feet outside the northeast corner of the existing building (Blaine 1985). The USTs were removed in July 1985. Areas of environmental concern for the site appear to be limited to residual soil and groundwater contamination related to the previous underground release of gasoline and diesel compounds from the former UST facility. Four groundwater monitoring wells (MW-1 through MW-4) each approximately 30 feet deep have been installed at the site. Soil Testing Data from UST Pit Samples, Exploratory Borings and Monitoring Well-Bores Up to 8,700 mg/Kg Total Petroleum Hydrocarbons as gasoline (TPHg), and up to 27 mg/Kg Total Petroleum Hydrocarbons as diesel (TPHd) were detected in soil samples collected by Blaine Tech Services from beneath the former gasoline and diesel USTs in July 1985. Elevated concentrations of TPHg (up to 2,070 mg/Kg) were additionally detected in soil samples collected after overexcavation on 12/03/85 by Chips Environmental Consultants. Petroleum impact to soil was confirmed by the detected concentrations of TPHg ranging between 160 mg/Kg to 280 mg/Kg, TPHd ranging between 55 mg/Kg to 1,100 mg/Kg, and trace concentrations of benzene (up to 2.8 mg/Kg) in soil samples collected vertically from soil boring EB-1 by Dugan Associates on 11/11/97. Dugan Associates installed four monitoring wells (MW-1 through MW-4) in June 1999. Concentrations of TPHg up to 190 mg/Kg, TPHd up to 920 mg/Kg, and trace BTEX concentrations (up to 0.67 mg/Kg) were detected in soil samples collected from the well-bore for MW-1, which was drilled in the vicinity of the former elevated Blaine Tech Services samples, and Dugan Associates samples from boring EB-1. The gasoline additives EDB, 1,2-DCA, DIPE, ETBE, MTBE, TAME, and TBA do not appear to have impacted the soil at the site. The lateral and vertical extent of gasoline and diesel-impacted soils from the former leaky 12,000-gallon gasoline and 2,000-gallon diesel USTs appear to have been defined, and appears to be limited to the vicinity of the former USTs. Vertical control has been defined by soil sample S-MW1- 30, collected 30 feet bgs in well-bore MW-1, where trace levels of TPHd (1.8 mg/Kg), benzene (0.01 mg/Kg), and non-detectable concentrations of TPHg, toluene, ethylbenzene, xylenes, and MTBE were reported. Lateral control has been defined by non-detectable concentrations in soil samples collected from MW-2, MW-3, and MW-4. Previous Groundwater Flow Direction and Groundwater Sampling Data The groundwater gradient beneath the site has been documented to be consistently in the westsouthwest direction (See Figure 3). Cumulative groundwater monitoring data for samples collected from wells MW-2, MW-3 and MW-4 have been below drinking water standards (below MCLs and taste-threshold levels for gasoline and diesel compounds). The lateral extent of gasoline and diesel-impacted groundwater beneath the site appears limited to the vicinity of the former USTs and MW- 1. Cumulative groundwater monitoring data is presented in Table 2 and a time trend plot showing TPHg, TPHd, and benzene concentrations in MW-1 versus groundwater elevation is presented in Attachment C. Dual-Phase, High-vacuum Extraction Test (3-day event) GeoRestoration, Inc. (GRI) conducted a 3-day Dual-phase, High-vacuum Extraction Test (DPHVE) at the site in December 2004. The conclusions of that report indicated that the 3-day event only removed approximately 24 pounds of hydrocarbons from the site. GRI concluded that if the average hydrocarbon concentration of the water removed was 40 ppm (not measured but estimated from groundwater monitoring) 2,000-gallons of water would contain only 0.7 pounds of hydrocarbons. Continued SVE extraction would likely remove hundreds of additional pounds of hydrocarbons. However, drawing down the groundwater elevation is required to operate the SVE system, since the aquifer material is flooded. Such drawdown of groundwater will yield thousands of gallons of groundwater, requiring treatment and disposal of groundwater.

Case Type: LUST Cleanup Site

Status: Completed - Case Closed

Lead Agency: SANTA CLARA COUNTY LOP

Case Worker: Not Reported

Local Agency: Not Reported

RB Case Number: 14-333

Loc Case Number: 06S1E32M02f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Diesel, Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water)

How Discovered: Tank Closure

How Discovered Description: Not Reported

Stop Method: Close and Remove Tank

Stop Method Description: Not Reported

Action Date: 2012-04-11

Action Type: ENFORCEMENT

Action: Closure/No Further Action Letter

Global ID: SL721181220

Case Type: Cleanup Program Site

Status: Open - Remediation

Status Date: 1/1/1985

CUF Case: NO

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)

Case Worker: REG

Local Agency: Not Reported

RB Case Number: 43S0118

Loc Case Number: Not Reported

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: 1,4-Dioxane, Acetone, Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Xylene, \* \* CHLOROMETHANE, \* \* CIS-1,2-DICHLOROETHYLENE

Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Site History: Clean Harbors currently owns and operates the waste-chemical storage, treatment, and recycling facility at the Site. The facility has been in operation since 1975 under several different owners including Solvent Services Company (now dissolved) and Safety-Kleen Corporation (currently in bankruptcy). Clean Harbors purchased the Site in 2002. Plume/Contaminant Description: Extremely high concentrations of VOCs (1,500,000 ppm) and 23,000 ppb of 1,4-dioxane in the groundwater, Soil Description: Extremely high concentrations of VOCs and 1,4-dioxane in the soil underneath the facility. The extent of soil and groundwater pollution has been fully defined. In January 2008 the "Source Area Feasibility Study" was submitted to the RWQCB. This study evaluated the feasibility of several remedial technologies and concluded that in-situ biological remediation using in-situ bioreactors (ISBRs) was the preferred remedy for the source area. Cleanup actions taken at the Site include 1) removal of all underground storage tanks and associated soil, 2) operation of a steam injection and vapor extraction system, 3) operation of a groundwater extraction system using wells and trenches, 4) operation of an in-situ bioremediation system in May 2013. The HVAC system at the office building has been modified to mitigate the VOCs that were detected in indoor air testing conducted in April 2015. Indoor air samples collected in August 2015 and March 2016 indicate that the potential risk has been mitigated by operating the HVAC. Additional indoor air testing is required.

Site History: The site is located at 1020 Berryessa Road and currently operates as a Chevron Bulk Fuel Terminal. The terminal facility covers approximately 10 acres and consists of a retention pond, bulk fuel storage tanks, a pipeline-terminal center, buildings, and truck load-out facilities. The current site configuration is shown on the site plan. The fuel terminal, in operation since the mid-1960s, is used as a transfer station distributing motor fuel and jet fuel throughout the San Francisco Bay Area. The facility receives refined petroleum-hydrocarbon products from the Chevron Richmond Refinery by pipeline. This site is related to two separate cases under the Site Cleanup Program (CASE #: 2189.8309) and Waste Discharge Requirements (ORDER# 90-113). Information regarding the Site Cleanup Program case can be found at: [http://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=SL374291196](http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL374291196)

Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, Gasoline, Heating Oil / Fuel Oil, Waste Oil / Motor / Hydraulic / Lubricating

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Well used for drinking water supply

Site History: The site is an operating Chevron bulk fuel terminal and consists of a retention pond, bulk fuel storage tanks, a pipeline-terminal center, buildings, and truck load-out facilities. Since the mid-1960s, the bulk fuel terminal has been in operation as a transfer station for the distribution of vehicular and jet fuels. The facility receives refined petroleum hydrocarbon products via pipeline from the Chevron refinery in Richmond, California. The products are stored at the bulk fuel facility in above ground storage tanks, and are subsequently distributed from the facility by tanker trucks to various locations. Several spills and leaks were reported for this site between February, 1984 and July, 1986. Reports of these spills and leaks were based on observation or detection of hydrocarbons (I--ICs) in soil and groundwater monitoring wells. The storage tanks and oil water separators may be sources for the leaks. Site Cleanup requirements were adopted for this site in January 1990. The Order included tasks for onsite investigation and remediation, offsite investigation and remediation, and final cleanup for both onsite and offsite. Investigation of the extent of the problem and installation of onsite interim remedial actions has been ongoing. This site is related to two separate cases under the Leaking Underground Storage Tank (CASE #: 43-0021) and Waste Discharge Requirements (ORDER# 90-113). Information regarding the Leaking Underground Storage Tank case can be found at: [http://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0608500093](http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608500093)

Global ID: T0608562782

Case Type: LUST Cleanup Site

Status: Open - Remediation

Status Date: 9/13/2016

CUF Case: YES

Lead Agency: SANTA CLARA COUNTY LOP

Case Worker: AC

Local Agency: SANTA CLARA COUNTY LOP

RB Case Number: 14-560

Loc Case Number: 06S1E31R02f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Benzene, Ethylbenzene, Gasoline, Toluene, Xylene

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Site History: Before 1986, Dahl's maintained a UST to store gasoline fuel as a part of its equipment rental business. The 1,000-gallon UST was removed from the southeastern portion of the Site on May 19, 1986. Limited amounts of soil from beneath the UST were excavated to a depth of approximately 14 feet below ground surface (bgs) in June 1986. Two new 500-gallon USTs for gasoline and diesel fuels were installed in July 1986 in the same tank pit from which the former UST was removed. On February 10, 1999, the two 500-gallon USTs were removed, and the excavation was backfilled with imported soil. Soil samples collected by Blaine Tech Services, Inc., of San Jose, indicated that the soil underlying the former USTs was impacted by total petroleum hydrocarbons quantified as gasoline (TPHg); total petroleum hydrocarbons quantified as diesel (TPHd); methyl tertiary butyl ether (MTBE); and benzene, toluene, ethylbenzene, and total xylenes (referred to collectively as BTEX). The analytical results for a single grab sample of water from the bottom of the UST excavation indicated detectable concentrations of TPHg, TPHd, MTBE, benzene, ethylbenzene, and total xylenes. In response to a request from Santa Clara Valley Water District a work plan was prepared to define the extent of soil and groundwater contamination. Soil and grab groundwater samples were collected during implementation of this work plan, and TPHg, TPHd, benzene, ethylbenzene, and xylenes were detected in the samples. Toluene was also detected in grab groundwater samples. MTBE was not detected above the laboratory reporting limits in the soil or groundwater samples. In November and December 2000, additional soil and groundwater grab samples were collected at eight boring locations and groundwater samples from four existing groundwater monitoring wells (part of the former adjacent A.T. Marine Auto Parts site's well network). In September 2003, soil vapor samples were collected at four locations around the existing building at the Site. The soil vapor samples were analyzed for TPHg and BTEX. In August 2013, soil and soil vapor samples were collected in the vicinity and downgradient (north) of the former location of the USTs. Soil samples were collected at various depths from four locations, and soil vapor samples were collected from three locations. During the third quarter of 2014, soil samples were collected from four locations, and sampled soil vapor probes at four locations. Findings from these investigations indicate the presence of TPH in soil, and benzene and ethylbenzene in soil vapor, above the LTCP criteria. The source of these impacts is presumed to be former USTs that were located near the southern corner of the on-site warehouse building. Targeted remediation is required by the DEH to reduce benzene concentrations in groundwater and soil vapor.

Begin Date: 5/19/1986

Loc Case Number: 06S1E31R04f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water)

Site History: December 1991- One 2,500 gallon gasoline UST and one 750 gallon gasoline UST were removed. Both tanks were in poor condition and numerous holes were noted. Soil surrounding the tanks was excavated to a depth of 10 feet below grade and verification samples were collected at the bottom of the excavation. TPHG was detected at maximum concentration of 110 ppm. 1992-May/Based on soil analytical data from the initial tank pull the UST pit was over-excavated to a depth of 18 feet below grade (fbg). Verification soil samples detected TPHG and Benzene at maximum concentrations of 400 ppm and 0.081 ppm, respectively. 1992-October/Soil borings SB-1 through SB-4 were advanced to a maximum depth of 24.5 feet below grade. Soil and groundwater samples were analyzed for the presence of TPHG and BTEX compounds. TPHG, Benzene, Toluene, Ethylbenzene, and Xylenes were detected in soil sample SB-2 at a dept of 18.5-19.0 fbg at maximum concentrations of 1,100 ppm, 9.0 ppm, 16 ppm, 18 ppm, and 74 ppm, respectively. Groundwater grab sample SB-1 detected TPHG, Benzene, Toluene, Ethylbenzene, and Xylenes at maximum concentrations of 150,000 ppb, 3,100 ppb, 940 ppb, 3,000 ppb, and 7,500 ppb, respectively. 1993-May/Soil borings SB-1 through SB-8 were advanced and eight groundwater grab samples were collected. TPHG, BETEX were detected in groundwater samples SB-2 at maximum concentrations of 180,000,000 ppb, 77,000 ppb, 100,000ppb, 190,000 ppb, and 720,000 ppb, respectively. The groundwater analytical results indicate that higher concentrations of petroleum hydrocarbon contamination are present upgradient of the former onsite USTs. Environmental Restoration Services (ERS) suggests that the majority of contamination has migrated from an offsite source. Dahl's Automotive, Case No. 06S1E31R02f, located at 1091 North Tenth Street, is 350 feet south-southeast of the site. 1994-September/ Groundwater monitoring wells MW-1 and MW-2 were installed. TPHG was detected in soil sample MW-1 at a depth of 15 fbg at a maximum concentration of 38 ppm. Benzene, Toluene, Ethylbenzene, and Xylenes were detected in soil sample MW-2 at a depth of 16 fbg at mzximum concentrations of 0.083 ppm, 0.059 ppm, 0.110 ppm, and 0.230 ppm, respectively. TPHG, BTEX were detected in groundwater sample MW-1 at maximum concentrations of 11,000 ppb, 120 ppb, 28, ppb, 20 ppb, and 48 ppb, respectively. 1996-February/Groundwater monitoring wells MW-1 and MW-2 were sampled. TPHG and Benzene were detected at maximum concentrations of 49,000 ppb and 7,200 ppb, respectively. 1997-April/Groundwater monitoring wells MW-1 and MW-2 were sampled. TPHG and Benzene were detected at maximum concentrations of 20,000 ppb and 120 ppb, respectively. 1999-January/April/Groundwater monitoring wells MW-1 and MW-2 were sampled. TPHG and Benzene were detected at maximum concentrations of 28,000 ppb and 3,300 ppb, respectively. In June groundwater monitoring wells MW-3 and MW-4 were installed. TPHG, Ethylvenzene, and Xylenes were detected only in soil sample MW-4 at a depth of 15 fbg at concentrations of 84 ppm, 043 ppm, and 0.41 ppm, respectively. TPHG, Benzene, Ethylbenzene, and Xylenes were detected in groundwater sample MW-3 at maximum concentrations of 3,100 ppb, 360 ppb, 90 ppb, and 130 ppb respectively. Toleune was detected only in groundwater sample MW-4 at concentration of 8.6 ppb. In August groundwater monitoring wells MW-2 through MW-4 were sampled. Samples were analyzed for fuel oxygenates by EPA Method 8240. No fuel oxygenates were detected above their respective detection limits. 2000-October/Soil borings SB1 through SB7 were advanced to assess the extent of contamination in shallow soils. Soil samples were collected at a depth of 5 fbg and one grab groundwater sample was collected from each boring. No petroleum hydrocarbon contamination was detected in the soil. TPHG, BETEX were detected in groundwater samples SB1-GW at maximum concentratons of 9,200 ppb, 2,200 ppb, 240 ppb, 26 ppb, and 530 ppb, respectively. MTBE was detected at a maximum concentration of 31 ppb in groundwater sample SB2-GW. 2001- April/Grounwater monitoring wells MW-3 and MW-4 wee sampled. TPHG and Benzene were detected at maximum concentrations of 3,200 ppb and 930 ppb, respectively. MTBE was not detected above 50 ppb.

Global ID: T0608500618

Case Type: LUST Cleanup Site

Status: Open - Eligible for Closure

Status Date: 1/16/2014

CUF Case: NO

Lead Agency: SANTA CLARA COUNTY LOP

Case Worker: GOR

Local Agency: SANTA CLARA COUNTY LOP

RB Case Number: 10-074

Loc Case Number: 06S1E31J04f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Diesel, Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water)

Site History: In 1959, 2 single-walled UST were installed to provide 1500 gallons of gasoline and 2000 gallons of diesel storage. In 1998, vapor wells were installed and monitoring of combustible gas commenced. In February 1990 and March 1992, reported total combustible gas readings consistently over 10,000 ppm in 2 wells. In June 1992, 5 soil borings (SB1 and wells FS5-4 through FS5-7) were advanced onsite. SB1 was advanced to 41.5 ft bgs and the wells were completed between 20-26.5 ft bgs. Soil contamination as well as free product (FP) were identified by the investigation. FP was measured in wells FS5-4 and FS5-6. A FP skimmer was installed in 6/92. Both tanks were removed in 1993. The vapor wells were removed during UST removal and over-excavation. Maximum concentrations were reported of 430 ppm TPHd, 370 ppm TPHg, 1.5 ppm Benzene, 1.6 ppm Toluene, 7.1 ppm Ethylbenzene, and 43 ppm Xylenes in a soil sample collected from the final excavation. 270 cubic yards of soil were removed from the site. In April 1995, 2 additional soil borings and 4 groundwater monitoring wells (FS5-9 through FS5-12) were advanced on and offsite. In December, 2 additional wells FS5-14 and FS5-15 were installed. Additional investigation downgradient was to be completed to define the extent of contamination, however, the adjacent property owner has not granted access. In 2004, it was proposed to place ORC socks in the monitoring wells for remedial purposes. To date, this has not been completed.

Begin Date: 6/3/1992

Case Worker: CH

Local Agency: SANTA CLARA COUNTY LOP

RB Case Number: 11-010

Loc Case Number: 07S1E05D07f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil

Site History: SITE BACKGROUND/ ENVIRONMENTAL HISTORY as of March 6, 2012: The Site consists of an approximate 86 foot by 125 foot parcel located on the south corner of the intersection of North 13th Street and Hedding Street in San Jose, California (Figure 2). A retail/minimart and two bay garage building is located on the southwest portion of the Site. A canopy is located on the northwest portion of the Site adjacent to Hedding Street. The canopy covers three fuel dispenser islands. Each dispenser island has two dispensers for a total of six fuel dispensers at the Site. Two underground storage tanks (USTs) are located northeast of the mini-mart/garage. One of the USTs has a 20,000 gallon capacity and contains unleaded gasoline. The other UST has a 12,000 gallon capacity dual compartment design that contains 8,000 gallons of premium unleaded gasoline and 4,000 gallons of diesel. The remainder of the Site is covered with concrete. The Site is at an elevation of approximately 73 feet above mean sea level (msl), and the topography slopes gently to the northwest. 1. Installation of Two Groundwater Monitoring Wells – 1986. 2. Underground Storage Tank Removal – 1996. 3. Preliminary Subsurface Assessment – 1996. 4. Subsurface Soil Investigation – 1996. 5. Supplemental Site Investigation, Soil Vapor Extraction Pilot and Aquifer Testing – 2002. 6. Soil Vapor Extraction Remediation - 2004 to 2006. 7. Additional On-site and Off-site Subsurface Investigation – 2007. 8. Groundwater Monitoring and Sampling - 1996 to Present. SITE REMEDIATION HISTORY Site remedial history has been poorly documented. ESTC conducted soil vapor extraction from December 2004 through 2006. ESTC installed a groundwater extraction and treatment system in February 2009. ESTC and subsequently FREY operated the groundwater extraction and treatment system through October 7, 2011. The groundwater system extracted and treated an estimated 3,708,489 gallons. A total of 14.69 pounds (2.43 gallons) of petroleum hydrocarbons are estimated to have been recovered by the groundwater extraction system since startup on February 5, 2009 (FREY, 2012a). GROUNDWATER MONITORING DATA During the groundwater sampling event conducted on March 6, 2012, the highest concentrations of TPHg (5,360 ug/l) and benzene (8.5 ug/l) were detected in the groundwater sample collected from off-Site well STMW-15. The highest concentration of MTBE (2.3 ug/l) was detected in the groundwater sample collected from on-Site well STMW-6.

Begin Date: 4/18/1996

How Discovered: Not Reported

How Discovered Description: Report - Date discovered unknown

Stop Method: Close and Remove Tank

Stop Method Description: Date of tank removal not listed in report

Global ID: T0608530079

Case Type: LUST Cleanup Site

Status: Completed - Case Closed

Status Date: 12/2/2014

CUF Case: NO

Lead Agency: SANTA CLARA COUNTY LOP

Case Worker: GOR

Local Agency: SANTA CLARA COUNTY LOP

RB Case Number: 14-758

Loc Case Number: 06S1E32G03f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating

Potential Media Affected: Aquifer used for drinking water supply, Soil

Site History: Regulatory closure received on January 1997 from SCVWD with residual concentrations of TPHg, Benzene and MTBE following removal of a 550 gallon gasoline UST on July 1985. A 1,000 gallon diesel UST was subsequently installed in the same location as the previous gasoline UST. On February 2006 the 1,000 gallon diesel UST was removed and soil samples collected from tank excavation showed the following contaminants: TPHmo 3,300 ppm, TPHg 57ppm, Benzene .0075 ppm and MTBE .0078 ppm at 10 1/2 fbg. Work plan with proposed scope of work including removal of petroleum hydrocarbon impacted soil, soil sampling and grab groundwater sampling was received by LOP and approved in letter dated February 17, 2009. Subsurface investigation has not taken place to date. The responsible party and its consultant have not uploaded or posted any site investigation, remediation and monitoring work plans and reports on GeoTracker as of 5/8/2012

Begin Date: 2/17/2006

How Discovered: Tank Closure

How Discovered Description: Discovered when 1,000 gallon UST was removed

Stop Method: Close and Remove Tank

Stop Method Description: Tank removed

Agency Provided Latitude: 37.36739

Agency Provided Longitude: -121.883285

Loc Case Number: Not Reported

File Location: Regional Board

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, \* \* CIS-1,2-DICHLOROETHYLENE, Trichloroethylene (TCE)

Potential Media Affected: Aquifer used for drinking water supply

Site History: Volatile organic compounds (VOCs) released at the Gorilla Circuits site have polluted soil and groundwater, with groundwater pollution extending offsite. Maps of the groundwater pollutant plume produced for the Gorilla Circuits site indicate that the groundwater pollutant plume impacts the southern portion of the adjacent property (Aqua Science, Inc., December 26, 2007, Groundwater Monitoring Report).

Begin Date: 1/15/1998

How Discovered: \* Other Means

How Discovered Description: REPORTED BY OFF-SITE PROPERTY OWNER

Stop Method: \* Close and Remove Tank

Stop Method Description: LEAKING UST

Agency Provided Latitude: 37.3712437252508

Agency Provided Longitude: -121.897950768471

RB Case Number: 14-723

Loc Case Number: 06S1E32D01f

File Location: All Files are on GeoTracker or in the Local Agency Database

Potential Contaminants of Concern: Gasoline

Potential Media Affected: Other Groundwater (uses other than drinking water)

Site History: Background The subject site was used as a bulk fuel operation. The record is not clear as to when the bulk fuel operation began operating, but it could date back to the 19th century although there is some evidence it may have started in the 1920s. No records of original tank installations are known to exist. The site was also used as a retail fuel dispensing facility doing business as Spartan Service Center. Currently the site is occupied by a two story storage business. 1993 Six soil borings were installed. Free product was reported in each of the borings. Nine USTs were removed from the site. Soil samples collected beneath the former USTs detected up to 6,000 ppm TPH-g and 7,500 ppm TPH-d. 1994 Six above ground fuel storage tanks were removed from the site. 1995-96 Three exploratory trenches were excavated to assess the lateral and vertical extent of contamination. Groundwater was encountered at 26 feet bgs. TPH-g and TPH-d were detected at concentrations up to 24,000 ppm in soil. In April 1996, five monitoring wells were installed. Floating product was noted in the vicinity of MW-1 and MW-3, and in boring B-1. In soil up to 7.8 ppm TPH-g, 210 ppm TPH-d, and 0.31 ppm benzene were detected. In groundwater collected from MW-4 TPH-g and TPH-d were detected at 110 and 450 ppb, respectively. It was noted that groundwater flow was toward the west which is in the direction of a school which borders the western side of the site. In November 1996, two additional groundwater monitoring wells were installed to assess the downgradient extent of the contaminant plume. In soil up to 1,400 ppm TPH-g and 570 ppm TPH-d were detected. A groundwater sample collected from B-4 contained 15,000 ppb TPH-g, 690 ppb MTBE, and 990 ppb Benzene. 1998 An excavation to remove contaminated soil took place in 1998. The excavation reached a depth of 14 to 16 feet below ground surface. Impacted soil was excavated and stockpiled on-site. Off-hauling took place in two stages: the first stage removed 1516 tons of soil and the second 648 tons. Off-hauled soil was transported to Forward landfill in Manteca CA. 2006 From June 6, 2006 to December 28, 2006 a SVE system was operating. During the six months the system operated approximately 5.91 gallons of hydrocarbons were removed. The system was turned off due to inefficient extraction results.

Begin Date: 3/3/1989

How Discovered: Inventory Control

How Discovered Description: Not Reported

Stop Method: Close and Remove Tank, Remove Contents

Stop Method Description: Not Reported
