SECTION 1: INTRODUCTION

This report presents the results of the Phase I Environmental Site Assessment (ESA) performed at 4200 Dove Hill Road in San Jose, California (Site) as shown on Figures 1 and 2. This work was performed for David J. Powers & Associates in accordance with our March 20, 2015 Agreement (Agreement).

1.1 PURPOSE

The scope of work presented in the Agreement was prepared in general accordance with ASTM E 1527-13 titled, “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process” (ASTM Standard). The ASTM Standard is in general compliance with the Environmental Protection Agency (EPA) rule titled, “Standards and Practices for All Appropriate Inquiries; Final Rule” (AAI Rule). The purpose of this Phase I ESA is to strive to identify, to the extent feasible pursuant to the scope of work presented in the Agreement, Recognized Environmental Conditions at the property.

As defined by ASTM E 1527-13, the term Recognized Environmental Condition means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not Recognized Environmental Conditions.

Cornerstone Earth Group, Inc. (Cornerstone) understands that David J. Powers & Associates is assisting the City of San Jose in performing the required CEQA activities for a proposed on-Site development. The proposed development will consist of an assisted living facility with 290 units in two buildings. The residential buildings will be 4-stories built on podiums to allow ground-level parking. A small portion of both buildings will include ground-level residential. The project includes covered and uncovered parking areas, along with landscaped garden, recreational and common areas. Approximately 18 acres of the 21-acre Site will remain as private open space. We performed this Phase I ESA to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions at the Site. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions at the Site.

1.2 SCOPE OF WORK

As presented in our Agreement, the scope of work performed for this Phase I ESA included the following:
A reconnaissance of the Site to note readily observable indications of significant hazardous materials releases to structures, soil or ground water.

Drive-by observation of adjoining properties to note readily apparent hazardous materials activities that have or could significantly impact the Site.

Acquisition and review of a regulatory agency database report of public records for the general area of the Site to evaluate potential impacts to the Site from reported contamination incidents at nearby facilities.

Review of readily available information on file at selected governmental agencies to help evaluate past and current Site use and hazardous materials management practices.

Review of readily available maps and aerial photographs to help evaluate past and current Site uses.

Interviews with persons reportedly knowledgeable of existing and prior Site uses.

Preparation of a written report summarizing our findings and recommendations.

The limitations for the Phase I ESA are presented in Section 10.

1.3 ASSUMPTIONS

In preparing this Phase I ESA, Cornerstone assumed that all information received from interviewed parties is true and accurate. In addition, we assumed that all records obtained by other parties, such as regulatory agency databases, maps, related documents and environmental reports prepared by others are accurate and complete. We also assumed that the boundaries of the Site, based on information provided by David J. Powers & Associates, are as shown on Figure 2. We have not independently verified the accuracy or completeness of any data received.

1.4 ENVIRONMENTAL PROFESSIONAL

This Phase I ESA was performed by Stason I. Foster, P.E. and Kurt M. Soenen, P.E., Environmental Professionals who meet the qualification requirements described in ASTM E 1527-13 and 40 CFR 312 § 312.10 based on professional licensing, education, training and experience to assess a property of the nature, history and setting of the Site.

SECTION 2: SITE DESCRIPTION

This section describes the Site as of the date of this Phase I ESA. The location of the Site is shown on Figures 1 and 2. Tables 1 through 3 summarize general characteristics of the Site and adjoining properties. The Site is described in more detail in Section 7, based on our on-Site observations.
2.1 LOCATION AND OWNERSHIP

Table 1 describes the physical location, and ownership of the property, based on information provided by David J. Powers & Associates.

Table 1. Location and Ownership

SECTION 3: USER PROVIDED INFORMATION

The ASTM standard defines the User as the party seeking to use a Phase I ESA to evaluate the presence of Recognized Environmental Conditions associated with a property. For the purpose of this Phase I ESA, the User is David J. Powers & Associates. The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires specific tasks be performed by or on behalf of the party seeking to qualify for Landowner Liability Protection under CERCLA (i.e., the User).

Per the ASTM standard, if the User has information that is material to Recognized Environmental Conditions, such information should be provided to the Environmental Professional. This information includes: 1) specialized knowledge or experience of the User, 2) commonly known or reasonably ascertainable information within the local community, and 3) knowledge that the purchase price of the Site is lower than the fair market value due to contamination. A search of title records for environmental liens and activity and use limitations also is required.
3.1 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

An environmental lien is a financial instrument that may be used to recover past environmental cleanup costs. Activity and use limitations (AULs) include other environmental encumbrances, such as institutional and engineering controls. Institutional controls (ICs) are legal or regulatory restrictions on a property's use, while engineering controls (ECs) are physical mechanisms that restrict property access or use.

The regulatory agency database report described in Section 4.1 did not identify the Site as being in 1) US EPA databases that list properties subject to land use restrictions (i.e., engineering and institutional controls) or Federal Superfund Liens or 2) lists maintained by the California Department of Toxic Substances Control (DTSC) of properties that are subject to AULs or environmental liens where the DTSC is a lien holder.

ASTM E 1527-13 categorizes the requirement to conduct a search for Environmental Liens and AULs as a User responsibility. A search of land title records for environmental liens and AULs was not within the scope of the current Phase I ESA.

3.2 SPECIALIZED KNOWLEDGE AND/OR COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Based on information provided by or discussions with David J. Powers & Associates, we understand that David J. Powers & Associates does not have specialized knowledge or experience, commonly known or reasonably ascertainable information regarding the Site, or other information that is material to Recognized Environmental Conditions.

3.3 DOCUMENTS PROVIDED BY DAVID J. POWERS & ASSOCIATES

To help evaluate the presence of Recognized Environmental Conditions at the Site, Cornerstone reviewed and relied upon the documents provided by David J. Powers & Associates listed in Table 4. Please note that Cornerstone cannot be liable for the accuracy of the information presented in these documents. ASTM E1527-13 does not require the Environmental Professional to verify independently the information provided; the Environmental Professional may rely on the information unless they have actual knowledge that certain information is incorrect. A summary of the provided documents is provided below; please refer to the original reports for complete details (Appendix E).

Table 4. Documents Provided by David J. Powers & Associates

<td>Phase I Environmental Site Assessment Update 4200 Dove Hill Road, San Jose, California</td>
</tr>
</tbody>
</table>

Based on the information reviewed, the Site was historically utilized as orchard and a portion of the Site was historically a gravel quarry. Two residences reportedly were constructed on-Site by 1956 (PSI, 2005). ERAS (2009) interviewed the owner of the Site, Mr. Stanislaus Kuehne, who indicated that he purchased the Site in 1974. At the time of his purchase, the Site
reportedly was occupied by the two residences and a trucking yard; prior use as a rock quarry also was noted. Subsequently, the Site reportedly has been used for residential purposes, recreational vehicle (RV) and equipment storage, a landscaping operation and grazing land.

Two water supply wells were noted to be located on-Site; one of the wells reportedly is 50 feet deep and the other is 250 feet deep. A septic system also was noted to be present.

Eras (2009) stated that the only hazardous materials observed to be stored and used on the Site were approximately 5 gallons of various oils utilized for the maintenance of landscaping equipment. No evidence of past spillage, leakage or dumping of hazardous materials was observed by Eras on or near the Site at the time of their reconnaissance.

SECTION 4: RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Cornerstone conducted a review of federal, state and local regulatory agency databases provided by Environmental Data Resources (EDR) to evaluate the likelihood of contamination incidents at and near the Site. The database sources and the search distances are in general accordance with the requirements of ASTM E 1527-13. A list of the database sources reviewed, a description of the sources, and a radius map showing the location of reported facilities relative to the project Site are attached in Appendix A.

The purpose of the records review was to obtain reasonably available information to help identify Recognized Environmental Conditions. Accuracy and completeness of record information varies among information sources, including government sources. Record information is often inaccurate or incomplete. The Environmental Professional is not obligated to identify mistakes or insufficiencies or review every possible record that might exist with the Site. The customary practice is to review information from standard sources that is reasonably available within reasonable time and cost constraints.

4.1.1 On-Site Database Listings

The Site was not identified in the researched regulatory agency databases.

4.1.2 Nearby Spill Incidents

Based on the information presented in the agency database report, no off-Site spill incidents were reported that appear likely to significantly impact soil, soil vapor or ground water beneath the Site. The potential for impact was based on our interpretation of the types of incidents, the locations of the reported incidents in relation to the Site and the assumed ground water flow direction.

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

The following additional sources of readily ascertainable public information for the Site also were reviewed during this Phase I ESA.
4.2.1 City and County Agency File Review

Cornerstone requested available files pertaining to 4200 Dove Hill Road at the following public agencies: the San Jose Building Department (BD), San Jose Fire Department (FD), and the Santa Clara County Department of Environmental Health (DEH). The FD and DEH had no files pertaining to the Site. The BD files contained several documents and various correspondence pertaining to the planned on-Site development. The files included a 2010 Draft Initial Study/Mitigated Negative Declaration (Initial Study), which referenced a 2008 geotechnical study by E2C, Inc. The study by E2C included drilling and logging of five boreholes to depths of up to 16 feet below ground surface (bgs). Serpentine bedrock reportedly was encountered in all of the boreholes at depths ranging from the ground surface to 14 feet bgs.

The 2010 Initial Study noted that naturally occurring serpentine rock, soil or fill often contain naturally occurring asbestos (NOA). When this rock or soil is disturbed during construction and grading activities, there is a potential for release of asbestos fibers, which could affect construction workers and/or persons residing downwind. The Initial Study stated that this is “considered to be a potentially significant impact”. Proposed mitigation measures, among others, included 1) the implementation of various dust control measures, 2) replacing the top 2 feet of soil with clean soil and proper disposal of the impacted soil, and 3) notification of future homeowners that they may encounter asbestos in any subsurface excavations greater than 2 feet in depth and that special precautions will be required to reduce risks.

The Initial Study also referenced the prior Phase I ESAs that were summarized above in Section 3.3.

SECTION 5: PHYSICAL SETTING

We reviewed readily available geologic and hydrogeologic information to evaluate the likelihood that chemicals of concern released on a nearby property could pose a significant threat to the Site and/or its intended use.

5.1 RECENT USGS TOPOGRAPHIC MAP

A USGS 7.5 minute topographic map was reviewed to evaluate the physical setting of the Site. The Site’s elevation ranges from approximately 180 to 430 feet above mean sea level; topography in the vicinity of the Site slopes steeply downward to the west.

5.2 HYDROGEOLOGY

Based on the steep terrain, ground water depths at the Site are expected to be variable. PSI (2005) reported that one on-Site water supply well is 50 feet deep and the other is 250 feet deep. Additionally, during our Site visit, a natural spring was noted where water was observed seeping out of an on-Site hillside rock outcrop. The Site owner indicated that it typically produces water year-round; thus, indicating that ground water is present near the ground surface at the spring location. Ground water is expected to flow to the west, generally following surface topography.
SECTION 6: HISTORICAL USE INFORMATION

The objective of the review of historical use information is to develop a history of the previous uses of the Site and surrounding area in order to help identify the likelihood of past uses having led to Recognized Environmental Conditions at the property. The ASTM standard requires the identification of all obvious uses of the property from the present back to the property’s first developed use, or back to 1940, whichever is earlier, using reasonably ascertainable standard historical sources.

6.1 HISTORICAL SUMMARY OF SITE

The historical sources reviewed are summarized below. The results of our review of these sources are summarized in Table 5.

- **Historical Aerial Photographs:** We reviewed aerial photographs dated between 1939 and 2012 obtained from EDR of Shelton, Connecticut; copies of aerial photographs reviewed are presented in Appendix B.

- **Historical Topographic Maps:** We reviewed USGS 15-minute and 7.5-minute historical topographic maps dated 1899, 1953, 1961, 1968, 1973 and 1980; copies of historical topographic maps reviewed are presented in Appendix B.

- **Historical Fire Insurance Maps:** EDR reported that the Site was not within the coverage area of fire insurance maps.

- **Local Street Directories:** We reviewed city directories obtained from EDR that were researched at approximately 5 year intervals between 1922 and 2013 to obtain information pertaining to past Site occupants. The only identified Site occupants were Mr. Mel Fauvor (1991) and Mr. Stanislaus Kuehne (2000). The city directory summary is presented in Appendix C.

</tr>
</tbody>
</table>
6.2 HISTORICAL SUMMARY OF SITE VICINITY

Based on our review of the information described in Section 6.1, the general Site vicinity historically consisted mainly of agricultural land (orchards) with widely spaced residences. Highway 101 was constructed adjacent to the west of the Site during the 1940s. The property to the east and southeast of the Site appears to have been operated as a gravel quarry starting in the mid-1950s and continuing until at least the 1970s. An increase in mainly residential development is apparent in the general vicinity to the west of Highway 101 during the 1970s and 1980s. The easterly adjacent hilltop property and the former off-Site gravel quarry area were developed with residences during the early 2000s.

SECTION 7: SITE RECONNAISSANCE

We performed a Site reconnaissance to evaluate current Site conditions and to attempt to identify Site Recognized Environmental Conditions. The results of the reconnaissance are discussed below. Additional Site observations are summarized in Table 6. Photographs of the Site are presented in Section 7.2.1.

7.1 METHODOLOGY AND LIMITING CONDITIONS

To observe current Site conditions (readily observable environmental conditions indicative of a significant release of hazardous materials), Cornerstone staff Stason I. Foster, P.E. visited the Site on April 13, 2015 and was accompanied by Mr. Stanislaus Kuehne, the Site owner. The Site reconnaissance was conducted by walking accessible areas of the Site. Due to the steep terrain, our reconnaissance focused on the relatively flat, developed area on the western portion of the property; hillside areas were viewed from a distance. Cornerstone staff only observed those areas that were reasonably accessible, safe, and did not require movement of equipment, materials or other objects. The interiors of the two residences were not viewed, and storage containers, a small office structure and sheds located within the areas occupied by a landscape contractor were not accessible.

7.2 OBSERVATIONS

At the time of our visit, the Site was developed with a two-story residence and a single-story residence. A wood framed workshop with a concrete floor slab was present near the residences, along with several small storage sheds and two horse paddocks. The workshop and sheds contained a variety of tools, household items and other miscellaneous stored items. Observed hazardous materials within the workshop included various building maintenance
products (mainly paints related products) that were stored in retail containers with capacities of 1-gallon or less. Three 5-gallon containers of kerosene also were observed within one of the storage sheds. No evidence of significant spills was readily apparent.

A gravel covered and fenced area on the western portion of the Site was observed to be used as a storage yard by a landscape contractor. A small wood framed office building and several wood framed storage sheds were present within the storage yard, along with metal shipping containers, several RVs and boats, and a variety of landscape maintenance equipment.

To the north of the storage yard was a fenced area that was observed to be used by the landscape contractor as a potted plant nursery. A natural spring was observed uphill to the east of the nursery area. Water seeping out of a rock outcrop at the spring location was collected via piping in a trough (old bathtub) and transferred by piping into a small polyethylene lined pond within the nursery area. Mr. Kuehne indicated that the spring typically produces water year-round and that it was used to maintain the plants within the nursery area. Mr. Kuehne also stated that a second pond had previous been present on the east side of the fenced storage yard area. A stockpile of soil and landscaping mulch was present on the south side of the nursery area. Fill soil also appeared to have been used within portions of the nursery to level areas on which potted plants were placed.

Two water supply wells were observed on-Site that, according to Mr. Kuehne, supply water to the residences and the contractor storage yard area. An above ground water storage tank was observed on the hillside on the eastern portion of the Site. Mr. Kuehne stated that water was historically was pumped to the tank for storage, but it was no longer in use. Based on our observations and information provided by Mr. Kuehne, three septic tanks are located near the residences (two near the two-story residence and one near the one-story residence). Mr. Kuehne stated that a fourth septic tank had historically been present near the office building within the contractor’s storage yard area; he indicated that this fourth septic system was abandoned or removed and is no longer in use. A pole mounted electrical transformer was observed on-Site; no evidence of transformer oil leaks was readily apparent.

SECTION 8: ENVIRONMENTAL QUESTIONNAIRE AND INTERVIEWS

8.1 ENVIRONMENTAL QUESTIONNAIRE / OWNER INTERVIEW

To help obtain information on current and historical Site use and use/storage of hazardous materials on-Site, we provided an environmental questionnaire to Mr. Stanislaus Kuehne, the Site owner. The completed questionnaire is attached in Appendix D. Based on our review of the completed questionnaire, Mr. Kuehne has owned the Site since 1973. Other information presented on the questionnaire appears consistent with our observations as discussed in Section 7.3. Reported prior Site occupants were listed as a trucking company and landscaping businesses, along with residential occupants.

8.2 INTERVIEWS WITH PREVIOUS OWNERS AND OCCUPANTS

Contact information for previous Site owners and occupants was not provided to us. Therefore, interviews with previous Site owners and occupants could not be performed.

SECTION 9: FINDINGS, OPINIONS AND CONCLUSIONS (WITH RECOMMENDATIONS)

Cornerstone performed this Phase I ESA in general accordance to ASTM E1527-13 to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions. Our findings, opinions and conclusions are summarized below.

9.1 HISTORICAL SITE USAGE

Based on the information obtained during this study, the western and southern portions of the Site were historically occupied by an orchard. Most of the orchard trees appear to have been removed by the mid-1950s. During the 1960s, the southern portion of the Site was used as a gravel quarry; quarrying activities appear to have been discontinued by 1974.

Two residences are located on-Site. Based on historical aerial photographs and topographic maps, the two-story residence appears to have been constructed between 1939 and 1948, and the single-story residence was constructed between 1953 and 1961. A wood framed workshop along with several small storage sheds and two horse paddocks also are present and appear to have been constructed during the 1960s.

The western portion of the Site reportedly was historically used as a trucking yard. This area currently is occupied by a landscape contractor’s storage yard. A small wood framed office building and several wood framed storage sheds are present within the storage yard, along with metal shipping containers, several RVs and boats, and a variety of landscape maintenance equipment. Since the early 2000s, an on-Site area to the north of the storage yard has been used by the landscape contractor as a potted plant nursery.

9.2 CHEMICAL STORAGE AND USE

Observed hazardous materials included various building maintenance products (mainly paint related products) that were stored within the workshop in retail containers with capacities of 1-gallon or less. Three 5-gallon containers of kerosene also were observed within one of the storage sheds. No evidence of significant spills was readily apparent.
Eras (2009) stated that the only hazardous materials observed to be stored and used on the Site were approximately 5 gallons of various oils utilized for the maintenance of landscaping equipment. No evidence of past spillage, leakage or dumping of hazardous materials was observed by Eras on or near the Site at the time of their reconnaissance. The storage sheds and metal shipping containers used by the landscaping contractor were not accessible at the time of Cornerstone’s Site visit. As noted by Eras, we anticipate that limited quantities of lubricants and fuels for use within the landscaping equipment may be stored within these structures. The potential for these hazardous materials to have significantly impacted the Site appears low.

9.3 AGRICULTURAL USE

The Site was historically used for agricultural purposes (orchards). Pesticides may have been applied to crops in the normal course of farming operations. Residual pesticide concentrations may remain in on-Site soil. As a result of past quarrying and Site grading activities, portions of the topsoil that formerly supported the orchards may have been removed from the Site; thus, reducing the potential for pesticide impacted soil to remain. However, if elevated concentrations of agricultural chemicals remain in Site soil, mitigation or soil management measures may be required during construction/earthwork activities. We recommend performing soil sampling to evaluate if agricultural chemicals are present.

9.4 NATURALLY OCCURRING ASBESTOS

During a 2008 geotechnical study by E2C, Inc., serpentine bedrock reportedly was encountered at depths ranging from the ground surface to 14 feet bgs. Asbestos occurs naturally in ultramafic rock (such as serpentine). When this material is disturbed in connection with construction, grading, quarrying or surface mining operations, asbestos-containing dust can be generated. Exposure to asbestos can result in health ailments.

The Asbestos Airborne Toxic Control Measure (ATCM) for Construction, Grading, Quarrying and Surface Mining Operations (California Code of Regulations, Title 17, Section 93105) was signed into State law on July 22, 2002, and became effective in the Bay Area Air Quality Management District (District) on November 19, 2002. The purpose of this regulation is to reduce public exposure to NOA from construction and mining activities that emit dust which may contain NOA. Due to the presence of serpentine on-Site, compliance with the ATCM provisions will be required as part of the planned development.

The 2010 Initial Study proposed several mitigation measures associated with the presence of NOA including 1) the implementation of various dust control measures, 2) replacing the top 2 feet of soil with clean soil and proper disposal of the impacted soil, and 3) notification of future homeowners that they may encounter asbestos in any subsurface excavations greater than 2 feet in depth and that special precautions will be required to reduce risks. We recommend consideration be given to collecting and analyzing soil samples for percent asbestos content to help evaluate waste disposal options and/or assist in identifying other potential mitigation measures.

An Asbestos Dust Mitigation Plan (ADMP) will need to be prepared for the proposed project and approved by the Bay Area Air Quality Management District (BAAQMD). The ADMP should include protocols to perform personnel and perimeter air and dust monitoring during grading
activities to evaluate the effectiveness of dust control measures. A Health and Safety Plan should also be prepared by a certified industrial hygienist.

9.5 WATER SUPPLY WELLS AND SEPTIC SYSTEMS

Two water supply wells are present on-Site. These wells should be properly destroyed in accordance with Santa Clara Valley Water District requirements prior to redevelopment of the Site.

Based on our observations and information provided by Mr. Kuehne, three septic tanks are located near the residences (two near the two-story residence and one near the one-story residence). Mr. Kuehne stated that a fourth septic tank had historically been present near the office building within the contractor’s storage yard area; he indicated that this fourth septic system was abandoned or removed and is no longer in use. The on-Site septic systems should be properly abandoned in accordance with applicable regulations prior to redevelopment of the Site.

9.6 UNDOCREMENTED FILL

A stockpile of soil and landscaping mulch is present on the south side of the nursery area. Fill soil also appears to have been used within portions of the nursery to level areas on which potted plants were placed. The source and quality of the imported soil are not known. The potential for this soil to have significantly impacted the Site appears low; however, if this material will remain on-Site, sampling and laboratory analyses should be considered to evaluate the soil quality.

9.7 IMPORTED SOIL

If the planned development will require importing soil for Site grading, we recommend documenting the source and quality of imported soil. The DTSC’s October 2001 Clean Fill Advisory provides useful guidance on evaluating imported fill.

9.8 POTENTIAL ENVIRONMENTAL CONCERNS WITHIN THE SITE VICINITY

Based on the information obtained during this study, no hazardous material spill incidents have been reported in the Site vicinity that would be likely to significantly impact the Site.

9.9 ASBESTOS CONTAINING BUILDING MATERIALS (ACBMS)

Due to the age of the on-Site structures, building materials may contain asbestos. If demolition, renovation, or re-roofing of the building is planned, an asbestos survey is required by local authorities and/or National Emissions Standards for Hazardous Air Pollutants (NESHAP) guidelines. NESHAP guidelines require the removal of potentially friable ACBMs prior to building demolition or renovation that may disturb the ACBM.

9.10 LEAD-BASED PAINT AND TERMITE CONTROL PESTICIDES

The Consumer Product Safety Commission banned the use of lead as an additive in paint in 1978. Based on the age of some of the buildings, lead-based paint may be present. The removal of lead-based paint is not required prior to building demolition if the paint is bonded to the building materials. However, if the lead-based paint is flaking, peeling, or blistering, it
should be removed prior to demolition. In either case, applicable OSHA regulations must be followed; these include requirements for worker training, air monitoring and dust control, among others. Any debris containing lead must be disposed appropriately.

Additionally, soil adjacent to structures that are painted with lead-containing paint can become impacted with lead as a result of the weathering and/or peeling of painted surfaces. Soil near wood framed structures also can be impacted by pesticides historically used to control termites. No information was identified during this study regarding the use of lead based paint or termite control pesticides on-Site; however, if used, residual pesticide and lead concentrations may remain in on-Site soil. Prior to redevelopment of the Site, we recommend that shallow soil at the structure locations be evaluated for the possible presence of lead and pesticides.

9.11 DATA GAPS

ASTM Standard Designation E 1527-13 requires the Environmental Professional to comment on significant data gaps that affect our ability to identify Recognized Environmental Conditions. A data gap is a lack of or inability to obtain information required by ASTM Standard Designation E 1527-13 despite good faith efforts by the Environmental Professional to gather such information. A data gap by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. The following data gaps were identified:

- Contact information for the former occupants and owners of the Site was not provided to us. Thus, former occupants and owners were not interviewed during this study. The general environmental setting of the Site appears to have been established based on the information reviewed from other data sources. We do not consider this data gap to be significant.

- During our Site visit, storage containers, a small office structure and sheds located within the areas occupied by a landscape contractor were not accessible. Based on the observed Site uses, it appears unlikely that significant quantities of hazardous materials would be present within the inaccessible structures. However, the lack of access may diminish our ability to identify Recognized Environmental Conditions.

9.12 DATA FAILURES

As described by ASTM Standard Designation E 1527-13, a data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the historical research objectives have not been met. Data failures are not uncommon when attempting to identify the use of a Site at five year intervals back to the first use or to 1940 (whichever is earlier). ASTM Standard Designation E 1527-13 requires the Environmental Professional to comment on the significance of data failures and whether the data failure affects our ability to identify Recognized Environmental Conditions. A data failure by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. No significant data failures were identified during this Phase I ESA.

9.13 RECOGNIZED ENVIRONMENTAL CONDITIONS

Cornerstone has performed a Phase I ESA in general conformance with the scope and limitations of ASTM E 1527-13 of 4200 Dove Hill Road, San Jose, California. This assessment identified the following Recognized Environmental Conditions.
• The Site historically was used for agricultural purposes. There is a potential that residual pesticides could remain in Site soil. If present, this soil may require appropriate management.

• Soil adjacent to structures that are painted with lead-containing paint can become impacted with lead as a result of the weathering and/or peeling of painted surfaces. Soil near wood framed structures also can be impacted by pesticides historically used to control termites. There is a potential that residual lead and pesticide concentrations could remain in on-Site soil near structures.

As noted in Section 9.4, there is a potential that NOA is present within on-Site soil/bedrock. The potential presence of NOA does not appear to meet the definition of Recognized Environmental Conditions per ASTM E 1527-13; note, however, that Cornerstone considers this item to be a potential environmental concern.

SECTION 10: LIMITATIONS

Cornerstone performed this Phase I ESA to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions associated with the Site. David J. Powers & Associates understands that no Phase I ESA can wholly eliminate uncertainty regarding the potential for Recognized Environmental Conditions to be present at the Site. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions. David J. Powers & Associates understands that the extent of information obtained is based on the reasonable limits of time and budgetary constraints.

Findings, opinions, conclusions and recommendations presented in this report are based on readily available information, conditions readily observed at the time of the Site visit, and/or information readily identified by the interviews and/or the records review process. Phase I ESAs are inherently limited because findings are developed based on information obtained from a non-intrusive Site evaluation. Cornerstone does not accept liability for deficiencies, errors, or misstatements that have resulted from inaccuracies in the publicly available information or from interviews of persons knowledgeable of Site use. In addition, publicly available information and field observations often cannot affirm the presence of Recognized Environmental Conditions; there is a possibility that such conditions exist. If a greater degree of confidence is desired, soil, ground water, soil vapor and/or air samples should be collected by Cornerstone and analyzed by a state-certified laboratory to establish a more reliable assessment of environmental conditions.

Cornerstone acquired an environmental database of selected publicly available information for the general area of the Site. Cornerstone cannot verify the accuracy or completeness of the database report, nor is Cornerstone obligated to identify mistakes or insufficiencies in the information provided (ASTM E 1527-13, Section 8.1.3). Due to inadequate address information, the environmental database may have mapped several facilities inaccurately or could not map the facilities. Releases from these facilities, if nearby, could impact the Site.

David J. Powers & Associates may have provided Cornerstone environmental documents prepared by others. David J. Powers & Associates understands that Cornerstone reviewed and relied on the information presented in these reports and cannot be responsible for their accuracy.
This report, an instrument of professional service, was prepared for the sole use of David J. Powers & Associates and may not be reproduced or distributed without written authorization from Cornerstone. It is valid for 180 days. An electronic transmission of this report may also have been issued. While Cornerstone has taken precautions to produce a complete and secure electronic transmission, please check the electronic transmission against the hard copy version for conformity.

Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.
Phase I ESA
4200 Dove Hill Road
San Jose, CA 95121

Inquiry Number: 4245442.2s
March 26, 2015
Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.
A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA’s Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS
Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS
ENVIROSTOR: The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 03/11/2015 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board’s Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 02/16/2015 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CUPA Listings: A listing of sites included in the county’s Certified Unified Program Agency database. California’s Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there is 1 CUPA Listings site within approximately 0.25 miles of the target property.

SITE SCREENING DONE. A SOIL GAS INVESTIGATION WAS CONDUCTED JUNE 6, 1986 BY TRACER RESEARCH FOR THE PROJECT’S BUILDING CONTRACTOR, TO SCREEN THE AREA FOR ANY HALOGENATED CARBON CONTAMINATION WHICH MAY HAVE MIGRATED FROM THE LANDFILL. 12 SOIL GAS SAMPLES WERE ANALYZED FOR 1,1,1-TRICHLOROETHANE (TCA), TRICHLOROETHENE (TCE), & TETRACHLOROETHENE (PCE). HIGHEST LEVELS OF CON- TAMINANTS DETECTED WERE .02 PPB (PCE), PA REQUIRED-MEDIUM

Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 11/26/2012
Comments: Informed via e-mail from Tom M., "The site walk went fine. Nothing of concern noted and we updated the folder in the office with the latest site inspections."

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 11/30/2010
Comments: Conducted the 2010 Annual O&M Inspection on November 30, 2010.
Findings are: 1) The School Site Designee has changed to Tara Bell (her contact information will need to be updated too). 2) The contact information for the O&M Professional (Tom McCloskey) needs to be updated. 3) The primary NOA Coordinator is Veronica Lanto and the backup is Victor Sandoval (contact information for both will need to be included too). 4) The grassy drainage area located on the south side of the campus, near the park bathrooms, had tire ruts from a mower. The District said they would place orange fencing around the wet area to prevent from the city from cutting the grass in the area that would cause tire ruts. 5) District would like to reduce the size of the NOA cap from 6 to 4 acres. Proof of the reduced size needs to be provided along with a survey map showing the size change and the new cap boundaries. It is understood that the city has been maintaining the 2 acre area however, please make sure they know of the boundary change. 6) It is understood that the city owns the property that the school is on. However, please inform the city that the campus has engineering controls (e.g., capped) placed to prevent exposure to NOA and if they need to conduct work on the cap to please inform the NOA Coordinator so proper procedures are followed to prevent exposure to NOA.

Completed Date: 08/30/2011
Comments: On August 30, 2011, the Five-Year / 2011 Annual Inspection for Ramblewood Elementary School was conducted. No deficiencies found. However, the Annual NOA training will need to be updated. In addition, the O&M Plan will be updated. Areas to monitor are: 1) The drain inlet, located north of the back parking area, continues to get covered. 2) There is a noticeable change in the cap thickness, at cap thickness monitoring station A, from when the monitor was first placed. 3) A pathway has formed between the sidewalk around Building B and the Ramblewood Park in the southwest portion of the campus. Possible future plans are: The addition of class rooms. There are discussions of either placing two portables north of Building A on the hardscape play area or adding a building in the southeast corner of Building A in the courtyard. In addition, there is discussion of the school switching to recycled water for irrigation. If this occurs, a trench might be need, which could extend into native NOA soil, to assist in the transfer. This trench would be across the lower portion of the exit driveway.

The document contains information about a facility in San Francisco Bay, with the following details:

- **Facility ID:** San Francisco Bay 43I006930
- **Facility Type:** Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
- **NPDES Number:** CAS000001
- **Subregion:** 2
- **Facility Telephone:** 4082775533
- **Agency Name:** SAN JOSE CITY OF
- **Agency Address:** 777 N 1st St Ste 300
- **Agency City,St,Zip:** San Jose 951126351
- **Agency Contact:** LYNCH GARY
- **Agency Telephone:** 4082775533
- **Agency Type:** City
- **SIC Code:** 0
- **SIC Code 2:** Not reported
- **Primary Waste Type:** Not reported
- **Primary Waste:** Not reported
- **Waste Type2:** Not reported
- **Waste2:** Not reported
- **Primary Waste Type:** Not reported
- **Primary Waste:** Not reported
- **Secondary Waste:** Not reported
- **Secondary Waste Type:** Not reported
- **Design Flow:** 0
- **Baseline Flow:** 0
- **Reclamation:** Not reported
- **POTW:** Not reported
- **Treat To Water:** Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
- **Complexity:** Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### Federal NPL site list

**NPL:** National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/16/2014

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.
Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/18/2014  Source: Environmental Protection Agency

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

ENVIRONMENTAL DATABASES:

**ENVIROSTOR: EnviroStor Database**

The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment.
Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

WMUDS/SWAT: Waste Management Unit Database
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Land Records

LIENS 2: CERCLA Lien Information
A Federal CERCLA (‘Superfund’) lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.
LIENS: Environmental Liens Listing
A listing of property locations with environmental liens for California where DTSC is a lien holder.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program’s oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder’s office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Records of Emergency Release Reports
HMIRS: Hazardous Materials Information Reporting System
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

CHMIRS: California Hazardous Material Incident Report System
California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

LDS: Land Disposal Sites Listing
The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

MCS: Military Cleanup Sites Listing
    The State Water Resources Control Board and nine Regional Water Quality Control Boards partner with the Department of Defense (DoD) through the Defense and State Memorandum of Agreement (DSMOA) to oversee the investigation and remediation of water quality issues at military facilities.

    Date of Government Version: 03/13/2015

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators
    RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

    Number of Days to Update: 62
    Next Scheduled EDR Contact: 04/27/2015
    Data Release Frequency: Semi-Annually

FUDS: Formerly Used Defense Sites
    The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.
CONSENT: Superfund (CERCLA) Consent Decrees
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

ROD: Records Of Decision
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US MINES: Mines Master Index File
Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

TRIS: Toxic Chemical Release Inventory System
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

TSCA: Toxic Substances Control Act
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.
FTTS: FIFRA/TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

FTTS INSPI: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSPI: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.
ICIS: Integrated Compliance Information System
The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

PADS: PCB Activity Database System
PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

MLTS: Material Licensing Tracking System
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

RADINFO: Radiation Information Database
The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

FINDS: Facility Index System/Facility Registry System
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).
RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.
**FEDLAND: Federal and Indian Lands**

**LEAD SMELTER 2: Lead Smelter Sites**
A list of several hundred sites in the U.S. where secondary lead smelting was done from 1931 and 1964. These sites may pose a threat to public health through ingestion or inhalation of contaminated soil or dust.

**US FIN ASSUR: Financial Assurance Information**
All owners and operators of facilities that treat, store, or dispose of hazardous waste are required to provide proof that they will have sufficient funds to pay for the clean up, closure, and post-closure care of their facilities.

**PCB TRANSFORMER: PCB Transformer Registration Database**
The database of PCB transformer registrations that includes all PCB registration submittals.

**COAL ASH EPA: Coal Combustion Residues Surface Impoundments List**
A listing of coal combustion residues surface impoundments with high hazard potential ratings.

**MWMP: Medical Waste Management Program Listing**
The Medical Waste Management Program (MWMP) ensures the proper handling and disposal of medical waste by permitting and inspecting medical waste Offsite Treatment Facilities (PDF) and Transfer Stations (PDF) throughout the state. MWMP also oversees all Medical Waste Transporters.
COAL ASH DOE: Steam-Electric Plant Operation Data
A listing of power plants that store ash in surface ponds.

Date of Government Version: 12/31/2005

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data
on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This
information comes from source reports by various stationary sources of air pollution, such as electric power plants,
steel mills, factories, and universities, and provides information about the air pollutants they produce. Action,
air program, air program pollutant, and general level plant data. It is used to track emissions and compliance
data from industrial plants.

US AIRS MINOR: Air Facility System Data
A listing of minor source facilities.
**EDR HIGH RISK HISTORICAL RECORDS**

**EDR Exclusive Records**

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

**EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners**

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**EDR RECOVERED GOVERNMENT ARCHIVES**

**Exclusive Recovered Govt. Archives**
RGA LF: Recovered Government Archive Solid Waste Facilities List
The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Resources Recycling and Recovery in California.

Data Release Frequency: Quarterly

SAN BERNARDINO COUNTY:
Hazardous Material Permits
This listing includes underground storage tanks, medical waste handlers/generators, hazardous materials handlers, hazardous waste generators, and waste oil generators/handlers.
SAN DIEGO COUNTY:

Hazardous Materials Management Division Database
The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

Solid Waste Facilities
San Diego County Solid Waste Facilities.

Environmental Case Listing
The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

SAN FRANCISCO COUNTY:

Local Oversight Facilities
A listing of leaking underground storage tank sites located in San Francisco county.

Underground Storage Tank Information
Underground storage tank sites located in San Francisco county.

SAN JOAQUIN COUNTY:
San Joaquin Co. UST
A listing of underground storage tank locations in San Joaquin county.

Date of Government Version: 01/08/2015

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013
Number of Days to Update: 45

Data Release Frequency: Annually
Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.
EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5’ Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE
Target Property County: SANTA CLARA, CA
Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data
Additional Panels in search area: Not Reported

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:
Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®
Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION  GENERAL DIRECTION
MAP ID   FROM TP   GROUNDWATER FLOW
Not Reported

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.
GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: HENNEKE
Soil Surface Texture: gravelly - loam
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel: HIGH
Depth to Bedrock Min: > 10 inches
Depth to Bedrock Max: > 20 inches

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

**Soil Surface Textures:** clay loam very gravelly - clay loam unweathered bedrock loam silt loam very gravelly - loam clay

**Surficial Soil Types:** clay loam very gravelly - clay loam unweathered bedrock loam silt loam very gravelly - loam clay

**Shallow Soil Types:** clay loam very gravelly - clay loam

**Deeper Soil Types:** weathered bedrock clay
LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5’ Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5’ Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5’ Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR’s Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California’s Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
APPENDIX B – HISTORICAL AERIAL PHOTOGRAPHS AND TOPOGRAPHIC MAPS
Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

TARGET QUAD
NAME: SAN JOSE EAST
MAP YEAR: 1953
SERIES: 7.5
SCALE: 1:24000

SITE NAME: Phase I ESA
ADDRESS: 4200 Dove Hill Road
San Jose, CA 95121
LAT/LONG: 37.288 / -121.8078

CLIENT: Cornerstone Earth Group
CONTACT: Stason Foster
INQUIRY#: 4245442.4
RESEARCH DATE: 03/26/2015
The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cornerstone Earth Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The EDR Aerial Photo Decade Package

Phase I ESA
4200 Dove Hill Road
San Jose, CA 95121

Inquiry Number: 4245442.10
March 30, 2015
Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.’s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

APPENDIX D – QUESTIONNAIRE
General Environmental Questionnaire

Cornerstone Earth Group is performing a Phase I environmental site assessment (ESA). The purpose of the ESA is to evaluate current and historic uses of the property that may have involved the use, generation, or storage of hazardous materials. Please respond to these questions to the best of your knowledge.

Return the completed, signed questionnaire by fax at (408) 245-4620 or by mail to the address below. Alternatively, a scanned copy can be emailed to sfoater@cornerstoneearth.com. The completed questionnaire will be attached to the ESA report. Thank you for your assistance and timely response.

GENERAL PROPERTY INFORMATION

1) Site Address(es) and Assessor's Parcel Number(s): Please list all current and former addresses. Some sites have multiple addresses; all are needed, even if they are not in current use.

<table>
<thead>
<tr>
<th>Address(es)</th>
<th>APN Number(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4200 S. Bayshore Hvy, San Jose, Ca, 95111 - E79-09-002-00</td>
<td></td>
</tr>
<tr>
<td>4200 Bayshore Hwy, San Jose, Ca, 95111 - E79-09-003-00</td>
<td></td>
</tr>
<tr>
<td>Land Only, San Jose, Ca, 95111 - E79-09-001-00</td>
<td></td>
</tr>
<tr>
<td>0 Bayshore Hvy, San Jose, Ca, 95111 - E79-09-002-00</td>
<td></td>
</tr>
</tbody>
</table>

2) Property Size: 21.73 (Sq. Ft. or Acres) (circle one)

3) Current site owner(s) and purchase date:

<table>
<thead>
<tr>
<th>Current Owner Name</th>
<th>Year Purchased</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arthur Maienchi, Edward Maienchi</td>
<td></td>
</tr>
</tbody>
</table>

4) Previous site owner(s) and dates of ownership:

<table>
<thead>
<tr>
<th>Prior Owner Name</th>
<th>Year Purchased</th>
<th>Year Sold</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pvt. B. Woodall + Johnnie Woodall</td>

</tbody>
</table>

If you checked yes to any of the above, please indicate the location of the documents. Can copies be provided? Yes ______ No ______

10) Have significant quantities of hazardous materials been used, stored, or generated on-site? Yes ______ No ______

If so, please list types and quantities and where these materials are or were located.

11) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, do you know of past uses of the site, specific chemicals that were or are present at the site, have knowledge of spills or other chemical releases at the site, or any environmental cleanups at the site?

Yes ______ No ______

If so, please briefly describe below, including whether reports documenting the activities are available for review by Cornerstone Earth Group.

12) Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state, or local law?

Yes ______ No ______
13) Are you aware of any activity or use limitations (UALs), such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
   Yes [ ] No [x]

   If so, please briefly describe below.

14) Are you aware of 1) any pending, threatened or past litigation, or administrative proceedings relevant to hazardous substances or petroleum products at the site, or 2) any notices from any governmental entity regarding possible violations of environmental laws or possible liability related to hazardous substances or petroleum products?
   Yes [ ] No [x]

   If so, please briefly describe below.

15) Completed by: [Name (print)]

   [Signature]

   [Company] [Date] 4/1/2015

[Signature]
July 25, 1986

Mr. D. Karcher:

I wish you happiness in your purchase of the 9" acreage and hope your efforts
your dreams will it.

The Broken State Title Co. advised me
to disburse for the $118.20 (for
26 days interest on note) which
will complete the fully paid conveyance
of the acreage.

Thank you.

Yours truly,

Julie H. Jones

The purpose of the ESA is to evaluate current and historic uses of the property that may have involved the use, generation, or storage of hazardous materials. Please respond to these questions to the best of your knowledge.

Return the completed, signed questionnaire by fax at (408) 245-4620 or by mail to the address below. Alternatively, a scanned copy can be emailed to sfoster@cornerstoneearth.com. The completed questionnaire will be attached to the ESA report. Thank you for your assistance and timely response.

GENERAL PROPERTY INFORMATION

1) Site Address(es) and Assessor's Parcel Number(s): Please list all current and former addresses. Some sites have multiple addresses; all are needed, even if they are not in current use.

Address(es)                        APN Number(s)

2) Property Size: 213 acres (Sq. Ft. or Acres [circle one])

3) Current site owner(s) and purchase date:

   Current Owner Name                        Year Purchased

4) Previous site owner(s) and dates of ownership:

   Prior Owner Name                        Year Purchased       Year Sold

   Woodell family
Assessment Change Notice

Date of Notice: 04/26/2000

KUEHNE, STANISLAUS AND ELEANORE TRUSTEE &

1235 CAMINO RAMON
SAN JOSE CA 95125-3714

Subject: Assessor Parcel Number Change for Ranch

For property tax purposes and per the State of California Revenue and Taxation Code, Section 327:

The Assessor Parcel Number(s) below have been changed effective for the assessment roll year(s) 2000-01

Reason for Change:

ASSESSOR’S MAPPING CHANGE: NO CHANGE TO PROPERTY BOUNDARY

Old Parcel(s):

676-01-003  676-01-004  676-01-005  676-01-018

New Parcel(s):

679-08-002  679-08-003  679-09-001  679-09-002

If you require further clarification, please call (408) 299-4231 at Extension 1240.

Very Truly Yours,

JOY TSAI

1. EXECUTIVE SUMMARY

PSI has completed a Phase I Environmental Site Assessment (ESA) of a multi-use property with Assessors Parcel Numbers (APN) 679-08-00200, 679-08-00300, 670-09-00200, and 679-09-00100 located at 4200 Dove Hill Road in San Jose, California. The assessment was performed in general accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-00, to comply with the contract between PSI and Marinda Real Estate dated January 25, 2005. Any exceptions to, or deletions from the ASTM E 1527-00 standard of practice are described in Section 2.4 of this report. In connection with the Phase I ESA, assessment of other environmental issues to evaluate business environmental risks that are beyond the scope of the ASTM E 1527-00 standard of practice was not conducted pursuant to the authorized scope of services with the exception of review of the State of California Natural Diversity Database for the occurrence of endangered and threatened species and communities.

The site consists of approximately 21 acres of multi-use land. The majority of the property is undeveloped with a portion of the undeveloped land used for pasture and grazing land. Approximately 1.7 acres on the western portion of the property is developed with two small residences, an access road, and storage buildings for Steve’s Landscaping. Historically, the site had been used as an orchard and as a gravel quarry. The storage for Steve’s Landscaping includes two very small offices, sheds, vehicles, and equipment. The property slopes steeply from east to west with the far western portion of the property being flat where it abuts Highway 101.

The vicinity of the property can generally be described as undeveloped land, highway and residential. Current usage of adjoining property includes: a residence and a barn to the north; United States (US) Highway 101 to the west; undeveloped land to the south; and single-family residences to the east.

1.1 PHASE I ESA

In accordance with ASTM Standard E 1527-00, this Phase I Environmental Site Assessment included reconnaissance of the subject and adjoining properties, interviews, and review of historical records and regulatory databases in an effort to identify evidence of recognized environmental conditions that may impact the property. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.
ON-SITE CONDITIONS

Recognized Environmental Conditions
• None

Historical Recognized Environmental Conditions
• None

OFF-SITE CONDITIONS

Recognized Environmental Conditions
• None

Historical Recognized Environmental Conditions
• None

1.2 RECOMMENDATIONS

Based on investigation of the property for evidence of recognized environmental conditions and other environmental issues, PSI offers the following recommendations.

• No further assessment of recognized environmental conditions appears to be warranted.

This summary does not contain all the information that is found in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.
2. INTRODUCTION

2.1 PURPOSE AND SCOPE
This Phase I ESA was performed to search for evidence of recognized environmental conditions that may have an adverse environmental impact upon the property. Based upon information provided to PSI, this Phase I ESA was conducted as part of a real estate transaction. The assessment included records review, interviews and reconnaissance to evaluate whether such conditions exist in connection with the property. The protocol utilized for this Phase I ESA was in general accordance with the requirements of ASTM Standard E 1527-00 as specified in the assessment contract. Based on the information provided, PSI assumes that Marinda Real Estate’s purpose in wanting the Phase I ESA performed is to satisfy one of the requirements to qualify for the innocent landowner defense to CERCLA liability. Assessment of other environmental issues beyond the scope of ASTM E 1527-00 was not performed in connection with the Phase I ESA, except review of the State of California Diversity Database. This report includes documentation to support the analysis, opinions and conclusions as presented.

2.2 SPECIAL TERMS AND CONDITIONS

AUTHORIZATION
Authorization to perform this assessment was given on December 18, 2005 by a signed copy of PSI Proposal No. 575-4E0123, between Marinda Real Estate and PSI.

PROPERTY ACCESS
Instructions as to the location of the property, access, and an explanation of the property and facilities to be assessed were provided by Ms. Dolly Marinda of Marinda Real Estate (MRE).

USE BY THIRD PARTIES
This report was prepared pursuant to the contract PSI has with MRE. That contractual relationship included an exchange of information about the property that was unique and between PSI and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between PSI and its client, reliance or any use of this report by anyone other than MRE, for whom it was prepared, is prohibited and therefore not foreseeable to PSI.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to PSI's contract with MRE. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.
Third party reliance letters may be issued on request and upon payment of the, then current fee for such letters. All third parties relying on PSI’s reports, by such reliance, agree to be bound by the proposal and PSI’s General Conditions. No reliance by any party is permitted without such agreement, regardless of the content of the reliance letter itself.

2.3 METHODOLOGY AND RESOURCES

RECONNAISSANCE
Ground reconnaissance was conducted on January 9, 2005 by Mr. Frank Poss of PSI. The ground reconnaissance consisted of observing the periphery of the property and viewing the site from accessible adjacent public thoroughfares. Interior portions of the property were systematically traversed to provide an overlapping field of view, wherever possible. The periphery of structures, where present on the property, was observed along with interior accessible common areas, maintenance and repair areas and a representative number of occupant spaces. Visual reconnaissance of adjoining properties was limited to areas and facilities that were readily observable from the subject property or from public access areas. Photographs were taken to document the features observed during the reconnaissance and environmental conditions of concern, where possible. A photographic log and copies of the photographs are included in Appendix D.

INTERVIEWS
Interviews were conducted with persons as noted in the following table. Records of Communication from interviews are included in Appendix E, and pertinent information reported by the interviewed parties is discussed in appropriate sections of the report.

ENVIRONMENTAL REGULATORY DATABASE INFORMATION

Information for the standard Federal and state environmental record sources specified in ASTM Standard E 1527-00 § 7.2.1.1 was obtained through Environmental Data Resources, Inc. (EDR). The database information was reviewed to help identify evidence of recognized environmental conditions in connection with the property. Unmappable (orphan) sites listed in the database with insufficient address or geocoding information to be mapped were evaluated for potential location within the approximate minimum search distance (AMSD). Copies of the EDR research data and a description of the databases are included in Appendix C of this report.

HISTORICAL USE INFORMATION

A history of the previous uses of the property, and properties in the surrounding area to the extent that this information was revealed in the course of researching the subject property, was developed consistent with practices specified in ASTM Standard E 1527-00 § 7.3. A summary of the standard historical sources and data reviewed by PSI is listed below. Copies of representative historical source information are provided in applicable Appendices.

- Historical United States Geological Survey (USGS) 7.5 minute topographic maps titled San Jose East, California, dated 1961, photo revised 1980.

The first obvious developed use of the property identified in this assessment appears to be as undeveloped land and orchard in 1939. Historical information sources researched in this assessment allowed uses of the property to be traced from the present back to 1939. The historical records researched did not allow the property’s history to be traced back to first developed use, which constitutes historical data failure per ASTM Standard E 1527-97 § 7.3.2.3. However, based on the site use as orchards and the lack of development in the site vicinity, the historical failure is not expected to alter the conclusions of this report.

INFORMATION REPORTED BY USER

Pursuant to ASTM Standard E 1527-97 § 5.2 and § 5.3, PSI requested that the client provide information on any environmental liens recorded against the property, communicate any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, and identify key site managers for interview purposes. Information that was reported has been incorporated into and is discussed in appropriate sections of the report. Documents were not provided by the client for our use in preparation of this report.
OTHER RESOURCES
Other resources and information accessed for purposes of this site assessment are discussed in appropriate sections of the report. Credentials and certifications of the environmental professionals responsible for preparation of this report are included in Appendix F.

2.4 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT
Along with all of the limitations set forth in various sections of the ASTM Standard E 1527-00 protocol, the accuracy and completeness of this report is necessarily limited by the following:

- Access Limitations – PSI was unable to walk the area used by Steve’s Landscaping. However, based on visual assessment from the periphery of this area and its known current use, the lack of access does not alter the conclusions of this report.
- Physical Obstructions to Observations - None
- Outstanding Information Requests – None
- Historical Data Source Failure - The first obvious developed use of the property identified in this assessment appears to be as undeveloped land and orchard in 1939. Historical information sources researched in this assessment allowed uses of the property to be traced from the present back to 1939. The historical records researched did not allow the property’s history to be traced back to first developed use, which constitutes historical data failure per ASTM Standard E 1527-97 § 7.3.2.3. However, based on the site use as orchards and the lack of development in the site vicinity, the historical failure is not expected to alter the conclusions of this report.
- Other - None

2.5 SIGNIFICANT ASSUMPTIONS
PSI has made the following significant assumptions in the preparation of this report:

- Regulatory Records Information – PSI assumes that all information provided by EDR regarding the regulatory status of facilities within the AMSD is complete, accurate, and current.
3. PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 LOCATION
PSI has completed a Phase I Environmental Site Assessment (ESA) of a multi-use property with Assessors Parcel Numbers (APN) 679-08-00200, 679-08-00300, 670-09-00200, and 679-09-00100 at 4200 Dove Hill Road in San Jose, California.

The subject property’s location is identified on the site vicinity map provided as Figure 1 in Appendix A.

3.2 PROPERTY VICINITY CHARACTERISTICS
The vicinity of the property can generally be described as undeveloped land, highway and, residential. Current usage of adjoining property includes: a residence and a barn to the north; United States (US) Highway 101 to the west; undeveloped land to the south; and single-family residences to the east.

A site vicinity sketch is included as Figure 2 in Appendix A.

3.3 DESCRIPTION OF PROPERTY AND IMPROVEMENTS
The site consists of approximately 21 acres of multi-use land. The majority of the property is undeveloped with a portion of the undeveloped land used for pasture and grazing land. Approximately 1.7 acres on the eastern portion of the property is developed with two small residences, an access road, and storage buildings for Steve’s Landscaping. The storage for Steve’s Landscaping includes two very small offices, sheds, vehicles, and equipment. Historically, the site has been used as a gravel quarry and an orchard. The property slopes steeply from east to west with the far western portion of the property being flat where it abuts Highway 101.

Photographs showing prominent features of the site are provided in Appendix D.

UTILITIES
Utility systems identified at the property, as specified in ASTM Standard E 1527-00 § 8.4.1 and § 8.4.3 are as follows:

- Electricity and Natural Gas are supplied by Pacific Gas & Electric.
- Sewage disposal at the property is provided through a septic leach field system at the site.
- Potable water at the property is obtained through two wells located at the site.
3.4 PHYSICAL SETTING

TOPOGRAPHIC MAP REVIEW
A current United States Geological Survey (USGS) 7.5 minute topographic map showing the area where the property is located was obtained and reviewed as specified in ASTM Standard E 1527-00 § 7.2.3. The 1961 (photorevised 1980) San Jose East, California quadrangle map was reviewed. According to the contour lines on the topographic map, the property is located approximately 300 feet above mean sea level. The contour lines in the area of the property indicate the area slopes steeply from the east to the west. Two small buildings (the current residences) and a gravel pit are listed as being located on the property.

SUPPLEMENTAL PHYSICAL SETTING INFORMATION
The following discretionary physical setting sources pursuant to ASTM Standard E 1527-00 § 7.2.3, were obtained and reviewed to provide supplemental information regarding radon incidence, soil, and hydrogeology.

Radon
A survey of residential indoor and outdoor radon concentrations in the California final report prepared for the California Air Resource board, dated March 1990, concluded that annual geometric mean radon concentrations for the State of California is approximately 0.9 picocuries per liter (pCi/L). The report also concluded that the percent of California residents exposed to radon concentrations greater than 4 pCi/L and 8 pCi/L is 0.8% and 0.03% respectively.

Based on information provided by Environmental Data Resources, Inc. (EDR), the results of the EPA/State Residential Radon Survey concluded that Santa Clara County is in Zone 2. Zone 2 is predicted to have an average indoor radon screening potential less than 2 pCi/L based on 20 measurements collected. The radon levels found in the Santa Clara County area are considered low. Information concerning radon measurements is provided in Appendix C.

Soils
According to information provided by EDR, the primary soil located in the vicinity of the subject property is the Henneke component. Henneke soils are primarily composed of gravelly loam and are a Class D soil. Class D soils are characterized by very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer. The soils tend to be well drained.

Hydrogeology
Based on data obtained from wells on site, first groundwater is expected to be within the upper 50 feet on the western portion of the subject site. Based on the steep grade from east to west, groundwater is expected to flow from the east to the west.
State of California Natural Diversity Database

PSI reviewed the State of California Natural Diversity Database overlay for the San Jose East Quadrangle. The only listed potential endangered plant or animal was the Santa Clara Valley dudleya (dudleya setchellii), which is an endangered plant. Additional work would be required to determine whether this plant is actually located on the subject site and whether its presence would impact future development of the site.
4. PROPERTY USAGE

4.1 CURRENT USES OF THE PROPERTY

Current use of the property as determined through observation, interviews and records review is described below.

The site consists of approximately 21 acres of multi-use land. The majority of the property is undeveloped with a portion of the undeveloped land used for pasture and grazing land. Approximately 1.7 acres on the western portion of the property is developed with two small residences, an access road, and storage for Steve’s Landscaping. The storage for Steve’s Landscaping includes two very small offices, sheds, vehicles, and equipment. The property slopes steeply from east to west with the far western portion of the property being flat where it abuts Highway 101.

The User should refer to Section 6 of this report for additional site reconnaissance details.

4.2 PAST USES OF THE PROPERTY

To the extent that indications of past uses of the property were identified through historical records review, reconnaissance observation, interviews, or through client provided information, they are identified below.

<table>
<thead>
<tr>
<th>Year(s)</th>
<th>Property Use</th>
<th>Reference Source</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>2005</td>
<td>The majority of the property is undeveloped with a portion of the undeveloped land used for pasture and grazing land. The far western portion of the property is developed with two small residences, an access road, and storage building for Steve’s Landscaping.</td>
<td>Site Reconnaissance</td>
</tr>
</tbody>
</table>
The historical information developed and reviewed for the subject property revealed no evidence of recognized environmental conditions. It should be noted, however that the subject property was agriculturally developed. While no structures indicative of pesticide/herbicide/chemical storage/mixing areas were noted in the aerial photographs, typically, crops are maintained with chemicals applied as a normal agricultural process. While no surficial evidence of misuse, misapplication of residual materials from pesticides, herbicides, or fertilizers were observed during the site reconnaissance, in certain instances, the chemicals historically applied to the subject site could be persistent and not biodegrade. As with any agriculturally developed land, there exists the possibility that pesticides, herbicides, or fertilizers have been applied, which may have impacted the subject property.

4.3 **ENVIRONMENTAL LIENS**

No evidence of environmental liens was indicated recorded against the property during the research conducted for this ESA.

4.4 **CURRENT AND PAST USES OF ADJOINING PROPERTIES**

To the extent that indications of current and past uses of adjoining properties were identified through reconnaissance observation, interviews, records review or through client provided information, they are described below. Locations of adjoining properties discussed can be found on the site vicinity sketch in Appendix A.

</tbody>
</table>

PSI identified no evidence of recognized environmental conditions associated with the past uses of the adjoining properties. However, it should also be noted that adjacent properties were at some point agriculturally developed. While no structures indicative of pesticide/herbicide/chemical storage/mixing areas were noted in the aerial photographs, typically, crops are maintained with chemicals applied as a normal agricultural process. While no surficial evidence of misuse, misapplication of residual materials from pesticides, herbicides, or fertilizers were observed during the site reconnaissance, in certain instances, the chemicals historically applied to the subject site could be persistent and not biodegrade. As with any agriculturally developed land, there exists the possibility that pesticides, herbicides, or fertilizers have been applied, which may have impacted the subject property.

The User should refer to Section 6 of this report for additional site reconnaissance information on the current use of adjoining property.
5. ENVIRONMENTAL REGULATORY RECORDS REVIEW

5.1 STANDARD FEDERAL AND STATE ENVIRONMENTAL RECORD SOURCES

The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and state environmental records database listings specified in ASTM Standard E 1527-00 § 7.2.1.1 are summarized in the following table. Detailed information for sites identified within the AMSDs is provided following the table, along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property. Copies of the EDR research data and a description of the databases are included in Appendix C of this report.

SUBJECT PROPERTY DATABASE FINDINGS
The subject property was not identified through the Federal and state environmental records review.

ADJOINING PROPERTY DATABASE FINDINGS
Adjoining properties were not identified through the Federal and state environmental records review.

NON-ADJOINING PROPERTY DATABASE FINDINGS
Non-adjoining properties within the AMSD with environmental issues that may impact the subject site were not identified through the Federal and state environmental records review.
6. RECONNAISSANCE FINDINGS

6.1 PROPERTY RECONNAISSANCE FINDINGS
A summary of uses and conditions consistent with ASTM Standard E 1527-00 § 8.4 indicating the likelihood of recognized environmental conditions in connection with the property is provided below. For each of the uses or conditions identified on the property, detailed information is discussed following the summary along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property.

PETROLEUM PRODUCTS IN CONNECTION WITH IDENTIFIED USES
To the extent observed or identified through interviews, the use, generation, treatment, storage or disposal of petroleum products identified in connection with use of the property is described below.

Based on the site reconnaissance, the area used by Steve’s Landscaping appeared to have numerous vehicles stored in this area. Based on the number of vehicles, petroleum products are likely to be present. PSI did not observe from the periphery of the location any indication that petroleum hydrocarbon use had impacted the surface with the exception of de minimus staining.
WELLS
To the extent observed or identified through interviews, wells in connection with use of the property are described below.

Two water production wells are located on the subject site. The wells service the two houses and the area operated by Steve’s Landscaping. Both of the wells produce approximately 3 gallons per minute with one of the wells drilled to 50 feet below ground surface and the other to 250 feet below ground surface. As neither of the wells were drilled for environmental monitoring purposes, PSI does not consider the presence of the wells to represent a recognized environmental condition.
6.2 Adjoining Property Reconnaissance Findings

A summary of uses and conditions identified on adjoining properties consistent with ASTM Standard E 1527-97 § 8.4 indicating the likelihood of recognized environmental conditions in connection with the subject property is provided below. For each of the uses or conditions identified on adjoining properties, detailed information is discussed following the summary along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property.

7. FINDINGS AND CONCLUSIONS

7.1 PHASE I ENVIRONMENTAL SITE ASSESSMENT

PSI has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of the ASTM Standard E 1527-00 protocol for MRE in Union City, California. Exceptions to or deletions from this protocol are discussed earlier in this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property:

ON-SITE CONDITIONS

Recognized Environmental Conditions
- None

Historical Recognized Environmental Conditions
- None

OFF-SITE CONDITIONS

Recognized Environmental Conditions
- None

Historical Recognized Environmental Conditions
- None
8. RECOMMENDATIONS

Based on investigation of the property for evidence of recognized environmental conditions, PSI offers the following recommendations.

- No further assessment of recognized environmental conditions appears to be warranted.
9. WARRANTY

PHASE I ENVIRONMENTAL SITE ASSESSMENT

PSI warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the ASTM Standard E 1527-00 protocol. These methodologies are described by the standard as representing good commercial and customary practice for conducting an Environmental Site Assessment of a parcel of property for the purpose of identifying recognized environmental conditions. However, these findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in the protocol and some of which are more specifically set forth below.

UNIDENTIFIABLE CONDITIONS

There is a possibility that even with proper application of these methodologies, conditions may exist on the property that could not be identified within the scope of the assessment or that were not reasonably identifiable from the available information. PSI believes that the information obtained from the records review and the interviews concerning the property is reliable. However, PSI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide the client with information regarding apparent suspicions of existing and potential adverse environmental conditions relating to the subject property.

No other warranties are implied or expressed.

MOLD

PSI did not provide any service to investigate or detect the presence of moisture, mold or other biological contaminants in or around any structure, or any service that was designed or intended to prevent or lower the risk of the occurrence of the amplification of the same. Client acknowledges that mold is ubiquitous to the environment with mold amplification occurring when building materials are impacted by moisture. Client further acknowledges that site conditions are outside of PSI’s control, and that mold amplification will likely occur, or continue to occur, in the presence of moisture. As such, PSI cannot and shall not be held responsible for the occurrence or recurrence of mold amplification.

Environmental Data Resources, Inc.
Aerial Photography Print Service

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following standard historical sources may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires "All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful." (ASTM E 1527-00, Section 7.3.2, page 12.)

Aerial Photographs

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Aerial photographs are a valuable historical resource for documenting past land use and can be particularly helpful when other historical sources (such as city directories or fire insurance maps) are not reasonably ascertainable. The EDR Aerial Photograph Print Service includes a search of local aerial photograph collections flown by public and private agencies. EDR's professional field-based researchers provide digitally reproduced historical aerial photographs at ten year intervals.

Please call Environmental Data Resources, Inc. Nationwide Customer Service at 1-800-352-0050 (8am-8pm ET)
with questions or comments about your report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

EXECUTIVE SUMMARY

EDR PROPRIETARY HISTORICAL DATABASES
See the EDR Proprietary Historical Database Section for details

SURROUNDING SITES: SEARCH RESULTS
Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE ASTM STANDARD

**CORTESE:** This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

**SWF/LF:** The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board’s Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Re: PHASE I ENVIRONMENTAL SITE ASSESSMENT UPDATE
4200 Dove Hill Road, San Jose, California
ERAS Project Number 09015

Dear Ms. Desai,

ERAS Environmental (ERAS) is pleased to provide you with the attached Phase I Environmental Site Assessment Update for the above referenced site (the "Property"). The previous Phase 1 Assessment was conducted by Professional Service Industries, Inc. in January, 2005. The assessment included a visual reconnaissance of the Property, a review of environmental databases for nearby sites, an interview with the owner of the Property, and a review of fire/building/planning department records. Conclusions and recommendations presented in our report were based upon the completion of these activities. If you have any questions regarding the information in this report, please don't hesitate to call us.

Sincerely, ERAS Environmental, Inc.

Andrew Savage
Project Geologist

Attachments:
1) Aerial Photographs from Previous Phase 1
2) Site Assessment Checklist and ASTM Transaction Screen
   and Site Assessment Questionnaire
3) Environmental FirstSearch Report
4) Environmental Professional's Certifications
The ESA Update project was performed to identify, to the extent feasible, recognized environmental conditions in connection with the Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The protocol utilized for this assessment is in general accordance with the requirements of ASTM Standard E 1527-05. The current ASTM standard meets the purpose and scope of the Environmental Protection Agency All Appropriate Inquiry (AAI).

Scope of Work
The ESA Update included a review of a previous Phase 1 Environmental Site Assessment (ESA), a visual reconnaissance of the Property, a review of a regulatory agency environmental database for the Property and surrounding area provided by FirstSearch Technology Corporation (FSTC), an interview with the owner of the Property, a review of fire/building/planning department records for the Property. Conclusions and recommendations presented in our report were based upon information gathered by completing these tasks.

The purpose of this Update was to address environmental issues indicated by the City of San Jose for the proposed redevelopment project. These included 1) an update of the scope of work in the 2005 ESA report to the current ASTM Standards for ESA projects and 2) to describe any potential environmental concerns associated with the currently proposed project to build a residential care facility on approximately 4 acres of the Property.

Previous Environmental Assessment
A previous ESA project was performed by Professional Service Industries, Inc.. The results of the ESA were presented in a report entitled Phase 1 Environmental Site Assessment, Multi-Use Property, 4200 Dove Hill Road, San Jose, California, dated January, 2005. No recognized environmental conditions related to the use or storage of hazardous materials or wastes were noted in the former ESA.

This former ESA indicated that the Property was undeveloped land utilized for orchard land in 1939. In 1956 and 1961 the Property was occupied by two residences and the remainder of the Property was vacant. In 1980 the Property was still occupied by the two residences and the Property was utilized as a rock quarry. In 1982 and 1993 the Property was indicated to be occupied by the two residences along with multiple small storage buildings. At the time of the site assessment, the Property was occupied by pasture and grazing land, two residences, and Steve’s Landscaping.

As part of their historical research the previous Phase 1 contained aerial photographs dated in 1939, 1956, 1982, and 1965. The location of the former orchard (1939) and the gravel quarry (1956) are shown on those two aerial photographs included as Attachment 1. An approximate outline of the current boundaries of Property is superimposed on each aerial photograph. Note that the entire current Property in 1956 appears to be used for a quarry.

Visual Reconnaissance
An ERAS representative visited the Property on February 19, 2009. The Property is located at the
end of Dove Hill Road on the eastern side of Highway 101 in the southeastern portion of San Jose. The Property was located in an area of residential and agricultural land use. The vicinity of the Property is rural with large plots of land. Residential houses/vacant land were present on the north and east sides of the Property, vacant land was located to the south of the Property, and Highway 101 formed the western boundary of the Property.

The Property consists of an area totaling approximately 21 acres that contains drive ways, pasture/grazing land, a landscaping company (nursery area), sheds and shipping containers utilized for storage and repair center for landscaping equipment, an RV and equipment storage yards, and two residential houses. One pole mounted transformer was located on the Property. No leaks or spills were noted in the vicinity of the transformer. Two water production wells were also observed on the Property. No leaks or spills were noted in the vicinity of these wells.

All residences and storage sheds other than the steel shipping containers were of wood construction. All driveways and storage yards consisted of gravel and dirt.

The Property slopes steeply down to the west. Evidence of the former gravel quarry is evident in the cut slope of the Property. The bulk of the top soil in which the former orchard was rooted appears to have been removed by the former quarry operation since exposed bedrock outcrops covered large area of the Property at the time of the site visit.

No evidence of underground storage tanks, pits or sumps was observed on or near the Property other than a septic system. The only hazardous materials observed to be stored and used on the Property were approximately 5 gallons of various oils utilized for the maintenance of the landscaping equipment. No evidence of past spillage, leakage or dumping of hazardous materials was observed on or near the Property at the time of the reconnaissance.

Observations made by ERAS at the time of the site visit are included on the ASTM Site Reconnaissance and Interview form also included in Attachment 2.

Database Review
Information from standard Federal and State environmental databases was provided to ERAS by Environmental FirstSearch Technology Corporation (FSTC)) of California. Data from governmental agency lists are updated and integrated into one database which is updated as these data are released. This integrated database also contains postal service data in order to enhance matching of street addresses. The complete database is included as Attachment 3 to this report. Leaks from underground storage tank (Leaking UST or LUST) sites are the most common source of local contamination. Leaks of this type generally do not extend down-gradient more than approximately 600 feet (approximately 1/8 mile) except under unusual conditions.

The environmental database search identified two State Sites within 1 mile of the Property and one Leaking UST (LUST) site located within ½ mile of the Property. The locations of these sites are indicated on the 1 Mile Radius, 0.5 Mile Radius and 0.25 Mile Radius maps in the database.
Groundwater is the medium that has the potential to carry contaminants from an off-site source to the Property. The groundwater generally follows the topography, flowing from higher to lower elevations. Based on regional and local topography, the estimated direction of groundwater flow in the area is to the west northwest.

None of the identified sites are located in close proximity or in a direction up gradient from the Property, therefore none are considered likely to pose a threat to subsurface environmental conditions beneath the Property.

**Interview**

ERAS interviewed the owner of the Property, Mr. Stanislaus Kuehne, on February 19, 2009. Mr. Kuehne indicated that he has owned the Property since 1974 and that it had been utilized for RV storage, landscaping contractor, residential, and a trucking yard in that time. He indicated that prior to his purchase of the Property it was utilized as a trucking yard and prior to that it was a rock quarry.

According to Mr. Kuehne he is not aware of: 1) the existence of environmental liens on the Property; 2) any notifications by government of violations of current environmental law, 3) the current presence of underground tanks on the Property, or 4) the presence of water wells on the Property.

Mr. Kuehne’s responses were compiled on ERAS Environmental Questionnaire along with observations made by ERAS at the time of the site visit. These responses were recorded on the ASTM Site Reconnaissance Checklist included in Attachment 2.

**Historical Records Review**

ERAS reviewed building/planning and fire department records for the Property at the City of San Jose on January 19, 2009. No fire department records were found.

Building/planning department records were present dated in 1999, 2002, and 2008. The record dated in 1999 was for the annexation of the Property to the City of San Jose. The 2002 record was the legal description of the Property and the 2008 records were regarding the proposed conversion of the Property into a senior living facility.

**Conclusions**

ERAS has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-05 for the Property. Any exceptions to, or deletions from this Practice are described in the report.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting.
of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Based on ERAS historical research and comprehensive historical reviews included in the previous ESA for the Property, there are no data gaps of concern.

Prior to the construction of the residential houses (between 1939 and 1956), the Property was utilized as orchard in the 1930’s and a gravel quarry from prior to 1956 through some time prior to 1974. The quarry operation occupied the Property until sometime prior to 1974 when the current owner purchased the Property. At the time of the purchase the Property was occupied by the two residences and a trucking yard. Since the purchase of the Property in 1974 the Property has operated as residential, RV and equipment storage, a landscaping operation, and grazing land.

It appears, based on the historical aerial photographs and review of topographic maps, that after the orchard was removed, the quarry began operations. These operations removed most of the top soil on the area proposed to be developed for the residential care facility as well as parts of hillside areas later used to construct the existing residences. This is important because removal of the top soil would have removed the bulk of any residual pesticides or chemicals utilized in the previous orchard operation.

An ERAS representative visited the Property on February 19, 2009. The Property is located at the end of Dove Hill Road on the eastern side of Highway 101 in the southeastern portion of San Jose. The Property was located in an area of residential and agricultural land use. The Property slopes steeply down to the west. Evidence of former gravel quarry is evident in the cut slope of the Property.

The Property consists of an area totaling approximately 21 acres that contains drive ways, pasture/grazing land, a landscaping company (nursery area), sheds and shipping containers utilized for storage and repair center for landscaping equipment, an RV and equipment storage yards, and two residential houses. One pole mounted transformer was located on the Property. No leaks or spills were noted in the vicinity of the transformer. Two water production wells were also observed on the Property. No leaks or spills were noted in the vicinity of these wells.

No evidence of underground storage tanks, pits or sumps was observed on or near the Property other than a septic system. The only hazardous materials observed to be stored and used on the Property were approximately 5 gallons of various oils utilized for the maintenance of the landscaping equipment. No evidence of past spillage, leakage or dumping of hazardous materials was observed on or near the Property at the time of the reconnaissance.

The Property and adjacent sites were not listed on the environmental databases. Based on distance, locations relative to the estimated groundwater flow direction or current site status, none of the nearby identified sites are considered threats to the current environmental status of the Property or subsurface soil and groundwater beneath it.
Recommendations
No evidence was discovered during this assessment to indicate that activities currently or historically conducted on or near the Property have contributed hazardous material contamination to soil or groundwater in the surrounding area. The bulk of any pesticides or chemicals utilized in the orchard operation was likely removed by the subsequent quarry operation. Recognized environmental conditions were not identified for soil or groundwater conditions at the Property. ERAS concludes that the risk of contamination at the Property is minimal and no further investigation is warranted for the Property at 4200 Dove Hill Road in San Jose, California.

Limitations
ERAS has performed the services for this project in accordance with current standards of the American Society for Testing and Materials (ASTM) for Environmental Site Assessments (ASTM standard E1527-05).

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part. Copies of the assessors resume and license are included as Attachment 4. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Based on the lack of any indication of response actions, cleanup or other remediation of hazardous substances or petroleum products on the Property, ERAS determined that a search for environmental liens would not be likely to add additional information for this assessment.

No guarantees are either expressed or implied. ERAS is not responsible for errors or omissions in the information supplied by the commercial database company. Reasonably ascertainable information was reviewed for this project. Reasonably ascertainable information is publicly available and obtainable within reasonable time and cost constraints, and reasonably reviewable.

The investigation was limited to a search for recognized environmental conditions. The term recognized environmental condition means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

There is no investigation, which is thorough enough to preclude the presence of hazardous
materials, which presently, or in the future, may be considered hazardous at the Property. Because regulatory evaluation criteria are constantly changing, concentrations of constituents presently considered low may, in the future, fall under more stringent regulatory standards that require remediation.

ERAS is not responsible for errors or omissions by the laboratory on which many of the conclusions made herein are based.

The visual reconnaissance was limited to visual observation of surface conditions at the Property. This approach reflects current ASTM standards unless the information obtained as part of this work suggests the need for further investigation. The investigation addresses recognized environmental conditions at the Property. However, certain conditions, such as those listed below, may not be revealed:

1) naturally occurring toxic materials in the subsurface soils, rocks, water or toxicity of on-site flora;
2) toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
3) biological pathogens;
4) contaminant plume below sampled or observed surface levels, originating from remote source;
5) constituents or constituent concentrations that do not violate present regulatory standards, but may violate future standards;
6) unknown site impact, such as "midnight" dumping and/or accidental spillage which may occur following the visual reconnaissance of the Property by ERAS.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions.
ATTACHMENT 1

AERIAL PHOTOGRAPHS FROM THE PREVIOUS ENVIRONMENTAL ASSESSMENT
SITE RECONNAISSANCE CHECKLIST

Site Reconnaissance: 4200 Dove Hill Road

Inspector: Andrew Savage Date: 2-9-09

Weather Conditions:

(1) Topography/Fill Areas: Steep slope to E West

(2) Soil/Geology: mainly bedrock (serpentine)

(3) Ground Water: wkn

(4) Vegetation: green lawn + landscape nursery

(5) Wetlands: none

(6) Drainage: Describe (i.e., roof drains, storm drains, rivers and streams flow directions)
   a) Building: to ground
   b) Site: to ground
   c) Regional: to Coyote Creek

(7) Public Utilities: ☐ Drinking Water ☑ Electric ☐ Storm Sewer ☐ Waste Water Sewer ☐ Heating

Private Utilities (identify): PG&E, Well, Septic

(8) Evidence of Contamination: Note environmental features (i.e., asbestos, sloppy housekeeping, hazardous chemicals, stores areas, containment structures)
   a) General Building Information:
      Bldg. Number: 2-residential Type:
      Age: 1965 Features:
      Construction: wood
   b) Building Interior Condition:

   Odors:
   Spillage:
   Potential Asbestos:
   Housekeeping:
   c) Building Exterior Condition:
      No. of Transformers: [x] Pete Marden - notes observed
      Content:
      Area of Stained Soils: none
      No. of Tanks/UST: 0 Age: Size: Type:
      No. of Tanks/AST: 0 Age: Size: Type:

(9) Storage Area Condition: OK
   No. of Drums: none
   No. of Gas Cylinders: none
   Waste Removal: fresh cans
   Debris: Lots

#### Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to TRACK Info Services, certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in TRACK Info Services's databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

#### Waiver of Liability

Although TRACK Info Services uses its best efforts to research the actual location of each site, TRACK Info Services does not and cannot warrant the accuracy of these sites with regard to exact location and size. All authorized users of TRACK Info Services's services proceeding are signifying an understanding of TRACK Info Services's searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

**BACKGROUND INFORMATION** (blank below = not reported by agency)

The Hellyer Park landfill occupies an area of approximately

18 acres within the recreational area known as Hellyer County Park. The landfill area is ungraded and is generally covered with vegetation with some areas showing exposed soil. There are no structures onsite except for a methane gas extraction and flare system. The landfill is not lined, but is reportedly capped with 2 to 3 feet of clay. The

- Continued on next page -
The estimated volume of the landfill is one million cubic yards with an average depth of approximately 20 feet.

The landfill was reportedly operated from 1965 to August of 1970. The property was originally owned by Garden City Disposal Company. Santa Clara County purchased the property in September 1965 and contracted operation of the landfill to the former owner, Garden City Disposal Company.

The Class II-2 landfill operated as a pit type landfill and was restricted to receiving nonhazardous rubbish. Based on available information, there was little or no activity at the landfill between 1970 and 1984.

Site Details Page - 11
Environmental FirstSearch Descriptions

NPL: EPA NATIONAL PRIORITY LIST - The National Priorities List is a list of the worst hazardous waste sites that have been identified by Superfund. Sites are only put on the list after they have been scored using the Hazard Ranking System (HRS), and have been subjected to public comment. Any site on the NPL is eligible for cleanup using Superfund Trust money. A Superfund site is any land in the United States that has been contaminated by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

FINAL - Currently on the Final NPL
PROPOSED - Proposed for NPL

NPL DELISTED: EPA NATIONAL PRIORITY LIST Subset - Database of delisted NPL sites. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

DELISTED - Deleted from the Final NPL

CERCLIS: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM (CERCLIS)- CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

PART OF NPL- Site is part of NPL site
DELETED - Deleted from the Final NPL
FINAL - Currently on the Final NPL
NOT PROPOSED - Not on the NPL
NOT VALID - Not Valid Site or Incident
PROPOSED - Proposed for NPL
REMOVED - Removed from Proposed NPL
SCAN PLAN - Pre-proposal Site
WITHDRAWN - Withdrawn

NFRAP: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

NFRAP – No Further Remedial Action Plan
P - Site is part of NPL site
D - Deleted from the Final NPL
F - Currently on the Final NPL
N - Not on the NPL
O - Not Valid Site or Incident
P - Proposed for NPL
R - Removed from Proposed NPL
S - Pre-proposal Site
W – Withdrawn

RCRA COR ACT: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. RCRAInfo facilities that have reported violations and subject to corrective actions.
RCRA TSD: **EPA** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities that treat, store, dispose, or incinerate hazardous waste.

RCRA GEN: **EPA** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM GENERATORS - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities that generate or transport hazardous waste or meet other RCRA requirements.

LGN - Large Quantity Generators  
SGN - Small Quantity Generators  
VGN – Conditionally Exempt Generator. Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

RCRA NLR: **EPA** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities not currently classified by the EPA but are still included in the RCRAInfo database. Reasons for non classification:
- Failure to report in a timely matter.  
- No longer in business.  
- No longer in business at the listed address.  
- No longer generating hazardous waste materials in quantities which require reporting.

Federal IC / EC: **EPA** BROWNFIELD MANAGEMENT SYSTEM (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant Programs.  
FEDERAL ENGINEERING AND INSTITUTIONAL CONTROLS- Superfund sites that have either an engineering or an institutional control. The data includes the control and the media contaminated.

ERNS: **EPA/NRC** EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS) - Database of incidents reported to the National Response Center. These incidents include chemical spills, accidents involving chemicals (such as fires or explosions), oil spills, transportation accidents that involve oil or chemicals, releases of radioactive materials, sightings of oil sheens on bodies of water, terrorist incidents involving chemicals, incidents where illegally dumped chemicals have been found, and drills intended to prepare responders to handle these kinds of incidents. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

Tribal Lands: **DOI/BIA** INDIAN LANDS OF THE UNITED STATES - Database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered part of the reservation.

State/Tribal Sites: **CA EPA** SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further
studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC’s staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The SMBRPD displays information in six categories. The categories are:
1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)

Please Note: FirstSearch Reports list the above sites as DB Type (STATE).

Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.

CORTESE LIST-Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program. The CAL EPA Dept. of Toxic Substances Control compiles information from subsets of the following databases to make up the CORTESE list:
1. The Dept. of Toxic Substances Control; contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database. Formerly known as ASPIS are included (CALSITES formerly known as ASPIS)
2. The California State Water Resources Control Board; listing of Leaking Underground Storage Tanks are included (LTANK)
3. The California Integrated Waste Management Board; Sanitary Landfills which have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF, now AB 3750).

Note: Track Info Services collects each of the above data sets individually and lists them separately in the following First Search categories in order to provide more current and comprehensive information: CALSITES: SPL, LTANK: LUST, WB-LF: SWL

State Spills 90: CA EPA SLIC REGIONS 1 - 9- The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups.

State/Tribal SWL: CA IWMB/SWRCB/COUNTY SWIS SOLID WASTE INFORMATION SYSTEM-The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed in the source field.
Please Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.

WMUDS-The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's.
Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.

ORANGE COUNTY LANDFILLS LIST- A list maintained by the Orange County Health Department.

State/Tribal LUST: CA SWRCB/COUNTY LUSTIS- The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database.

SAN DIEGO COUNTY LEAKING TANKS- The San Diego County Department of Environmental Health maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed in the source information field.

State/Tribal UST/AST: CA EPA/COUNTY/CITY ABOVEGROUND STORAGE TANKS LISTING-The
Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST’s with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation.

SWEEPS / FIDS STATE REGISTERED UNDERGROUND STORAGE TANKS- Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA’s Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. Track Info Services included the UST information from the FIDS database in its First Search reports for historical purposes to help its clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed with the source information.

INDIAN LANDS UNDERGROUND STORAGE TANKS LIST- A listing of underground storage tanks currently on Indian Lands under federal jurisdiction. California Indian Land USTS are administered by US EPA Region 9.

CUPA DATABASES & SOURCES- Definition of a CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.
A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified.

Please Note: Track Info Services, LLC collects and maintains information regarding Underground Storage Tanks from majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefore, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

State/Tribal IC: CA EPA DEED-RESTRICTED SITES LISTING- The California EPA’s Department of Toxic Substances Control Board maintains a list of deed-restricted sites, properties where the DTSC has placed limits or requirements on the future use of the property due to varying levels of cleanup possible, practical or necessary at the site.

State/Tribal VCP: CA EPA SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC’s staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The SMBRPD displays information in six categories. The categories are:
1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)

Please Note: FirstSearch Reports list the above sites as DB Type VC. Each Category contains information on properties based upon the type of work taking place at the site. The VC category contains only those properties undergoing voluntary investigation and/or cleanup and which are listed in the Voluntary Cleanup Program.

RADON: NTIS NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon project collected for a variety of zip codes across the United States.

State Permits: CA COUNTY SAN DIEGO COUNTY HE17 PERMITS- The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed in the source information field.
State Other:  CA EPA/COUNTY  SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC’s staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

The SMBRPD displays information in six categories. The categories are:
1. CalSites Properties (CS)
2. School Property Evaluation Program Properties (SCH)
3. Voluntary Cleanup Program Properties (VCP)
4. Unconfirmed Properties Needing Further Evaluation (RFE)
5. Unconfirmed Properties Referred to Another Local or State Agency (REF)
6. Properties where a No Further Action Determination has been made (NFA)

Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.

LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG- The County of Los Angeles Public Health Investigation Complaint Control Log.

ORANGE COUNTY INDUSTRIAL SITE CLEANUPS- List maintained by the Orange County Environmental Health Agency.

RIVERSIDE COUNTY WASTE GENERATORS-A list of facilities in Riverside County which generate hazardous waste.

SACRAMENTO COUNTY MASTER HAZMAT LIST-Master list of facilities within Sacramento County with potentially hazardous materials.

SACRAMENTO COUNTY TOXIC SITE CLEANUPS-A list of sites where unauthorized releases of potentially hazardous materials have occurred.
